That's your statement, Dwight, not mine.

I was merely providing a starting point for people, so they wouldn't have to
waste the time to find the url.

You are the one that made a point out of calling people stupid.

Good, Dwight. I suggest you look elsewhere for entertainment. Your time is
about up.

>Contesting in ANY form is idiotic.

Any form? That would include all sports, gambling, lotteries, applying for a job in competition against others, working for a job promotion in competition against others, and dozens of other day-to-day challenges ("contests").

Your attempt at oneupmanship on the newsgroups is a form of contesting so you've snagged yourself on a self-made paradox. Luckily, your opinion won't mean one iota to the thousands of happy competitors in the next contest; they'll go about having a fun weekend all the while your BP is soaring!

"Kim-W5TIT" <nospam@none.net> replied:

> No

Why not?

Since this is an amateur radio newsgroup, why clutter it
up with issues which are better treated in one of the many
newsgroups dedicated to such topics. Here are a few which
seem much more appropriate venues:

alt.current-events.terror-war
alt.society.civil-liberties
alt.terrorism.world-trade-center
alt.society.civil-liberty
alt.politics.usa.constitution
alt.support.religion.islam.taliban

Thank you for your reconsideration.

It would seem that the predominant topic on most peoples' minds these days are things that are currently being discussed here even in this newsgroup. This newsgroup is a group of radio amateurs, who are prone discuss any one of a number of topics at any given time--specific or not to amateur radio.

We "know" each other in this newsgroup, and discuss things with each other on that basis. We may not always be specific to amateur radio--in fact often are not.

Check back often for topical subject lines to see if there are any you feel inspired to participate in.

No reconsideration here, none was intended.

This is a perfect example of something else that can be moved
off this newsgroup.

Memo to Steve:

You don't like Lennie. Lennie doesn't like you...although I can't
imagine why! We got it, already. Give us a break from this sophomoric
Anderson-bashing. Direct your displeasure at someone who is
infinitely more deserving. Bin Laden comes readily to mind. Just
don't do it here...PLEASE!

In fact, why don't we all take a long, hard look at ourselves, and see if
we can make better use of the time we spend on this newsgroup. I'm
not saying stop spending that time here, just make it more productive
and less chaotic.

Hansl:

Bin Laden ain't got no steenkin' civil rights! He is an international terrorist, he kills people for the sheer terror of it. He has the blood of over 5,000 people from over 80 countries on his hands from the WTC/Pentagon attacks. He ain't got the steenkin' civil right to take a crap, much less go on living. Ignore the bleeding hearts. The don't understand what America is all about, never did, and never will. They have no functional understanding of the meaning of words like liberty, freedom, and independence. Most of all, they don't respect the civil rights of good, decent people if they must insist that animals like Osama Bin Laden and his fellow terrorist-trash gangsters have any civil rights whatsoever.

Bin Laden has a right to be slowly lowered into a large pot full of boiling pork fat. Let's see what the bleeding hearts have to say about THAT!

Hansl:

Sounds reasonable to me, and may be possible if we can keep a
Republican majority in the House, regain a Republican majority in
the Senate, and keep a Republican administration in the White
House. Elect more democrats, and we'll always be in "crisis mode."

>Here are some other "policy" questions for consideration:

> of 6.900-7.100 amateur-exclusive, in exchange for the current?
> (Which is 7.000-7.100 in R1 anr R3, 7.000-7.300 in R2).

Y knot?

>-- Should it be FCC policy to permit only traffic, weather, public service,
> and other such nets on the new 60-meter band?

Permit any legitimate amateur activity EXCEPT contesting and DX
nets.

>-- Should it be FCC policy to permit "talk shows" such as the K1MAN
> transmissions on Amateur Radio.

No. Not just "no," but hell no. K1MAN is not conducting legitimate
one-way information service in the same way as W1AW is. All he's
doing is massaging his ego. This needs to be nipped in the bud, and
the rules changed to give W1AW exclusive right to conduct regular
scheduled "broadcasts," and provide special protection from harmful
interference to W1AW transmissions.

>-- Should it be FCC policy to periodically conduct occupancy monitoring
> of VHF/UHF amateur bands, and adjust those allocations based on
> observed usage?

Absolutely. Use it or lose it. Crap or get off the pot. Make hay while
the sun shines. You get the idea.

>Surely we can think of more Amateur Radio policy matters that
>should be publicly discussed. Maybe we can get some ham radio
>back in this ham radio newsgroup.

What we really need to do is get some more ham radio into ham
radio.

I agree, Kim. This is a newsgroup for ham operators and ham operators occasionally have things on their minds other than ham radio. And if they want to discuss those things with other ham operators, this is the place to do it - not some other newsgroup where it would be almost impossible to find other ham operators.

Furthermore, I wouldn't pay too much attention to complaints from Hans, Larry, and so forth. They've participated in many off-topic discussions in this newsgroup and I've never seen them preach the same for themselves.

Which will then allow Lennie the Liar to spew his hatred and rhetoric
unchallenged.

Sorry...not on my watch.

>We got it, already. Give us a break from this sophomoric
>Anderson-bashing

As opposed to sophmoric no-coder or Kim bashing, Larry? Holding that
Putz's nose to the grindstone for his own misadventures is NOT "sophmoric".
It's a priviledge.

>In fact, why don't we all take a long, hard look at ourselves, and see if
>we can make better use of the time we spend on this newsgroup.

I would agree, and posted several items to that very effect. One was
picked up and subsequently published by "Worldradio". (Who else in this group
has been published FROM the NG?)

>I'm
>not saying stop spending that time here, just make it more productive
>and less chaotic.

Please note my response to Hans in another thread. I have suggested and
re-suggested over the last two or three years that we try to come to some
concensus on 40 meter band reallocation and the spectrum protection act, none
of which requires any "opinion" on code testing.

All three "threads" dissolved into the now-familiar code/no code rants
within four replies.

If Lennie makes a post I consider inaccurate or slanderous, I am going to
comment. I will not let that bullying twit get away with his lies and
propagandist misadventures unchallenged.

Yes. 200 kHz worldwide exclusive is more useful than 100 worldwide exclusive and 200 shared with highpower SWBC stations. Split the 200 kHz right down the middle - 100 phone and 100 digital/CW.

>-- Should it be FCC policy to permit only traffic, weather, public service,
> and other such nets on the new 60-meter band?

Nope. No way to enforce it, anyway.

>>somehow automatically "bad" because they see the proposed "new order"
>>as inferior to the old.
>
>I've not claimed any "new order," just some reasons for ending
>the morse code test for an amateur radio license.

You've done more than that. You want an age limit of 14 for any amateur
license, and a reduction to a single class of license.

> I've only
>claimed that removing the code test would give more citizens
>freedom to enter a hobby activity involving radio.

There has been no code test for the Tecnician class of license for more than a
decade. Thus, the code test is no barrier to entering amateur radio.
>
>OTHERS opposed to the elimination of code test seem to think
>that such elimination is "bad."

Yep. And they have posted reasons for that opinion. Is it forbidden to
disagree?

>Their judgemental viewpoint is
>in here, standing out, no ambiguity. Under those circumstances
>retention of the code test is "good" while elimination is "bad."

>I don't agree with such a personalized viewpoint.

Is that why you abuse those with the audacity to disagree with you and point out your logical errors?
>
>>> Anyone who continues to favor a code test as a pass-fail

>>> are "deserving" of a federal welfare program to yield them
>>> titles, status, and privilege.
>>
>>That's your distortion of reality, Len.
>
>It is based on what other code-lovers have written in here.
>The "distortion" is not mine.

Nope. The distortion is yours. You just equated code test with "code lovers". Not the same thing. But it shows your hatred of the mode itself, not just the test.
>
>>Translation: "Old" = "bad", "new" = "good"
>
>No. Incorrect. Retention of old regulations with the only
>reasons given as personal desires are not good...those
>are selfish.

The only reasons for removing the test are personal desires.
>
>>You and others promote "change" as if all change is automatically good
>>and any resistance or opposition to change is automatically bad. I
>>simply gave a clear example of how "change" is not always good.
>>Simple.
>
>Incorrect in judgement.

Why? Who made your opinion the only correct one?

> FREEDOM is not a bad word.

Neither is RESPONSIBILITY. Neither is TRADITION.
>
>Removal of the amateur code test will remove the strict,
>regimented alignment of amateur radio = morse code.

What alignment? Where is that alleged alignment documented?
>
>While that may seem revolutionary to some, the FCC does
>not consider that morse code skill to be a qualification for
>decision on whether or not an examinee is worth the grant
>of an amateur radio license

I've only told you that many, many times since December 1999. The code test issue is a dead duck, finished, finito, end of story. The only thing keeping it alive is the treaty requirement. Almost everyone has accepted that and moved on

- except you, Len.
>
>To a limited degree, the IARU now agrees with that.

More than a limited degree.
>
>Freedom from old, antiquated regulations is considered is
>considered "bad."

Again you reveal your bias against old things.

>Interesting. Maybe even "fascinating."
>The new order that was the old order. Status quoism.

Nope. Spin and twist from the spinmeister. The mere fact that a regulation is
old doesn't mean it is no longer needed.

Hans' suggestions:

>> a) 7.000-7.300MHz
>> b) 6.900-7.200MHz
>> c) 6.800-7.100Mhz

Personally, I'd prefer option b. The broadcasters would be required
(under one proposal I read) to move up, also. The get an "exclusive" and we
would too.

>Yes. 200 kHz worldwide exclusive is more useful than 100 worldwide exclusive
>and 200 shared with highpower SWBC stations. Split the 200 kHz right down the
>middle - 100 phone and 100 digital/CW.

I agree on the 200kHz being more useful as an exclusive than 300 shared,
but not the CW/digital split.

I'd make it 80/120.

>>-- Should it be FCC policy to permit only traffic, weather, public service,
>> and other such nets on the new 60-meter band?
>
>Nope. No way to enforce it, anyway.

I disagree that they could not enforce it, Jim. Riley et al have been
doing a pretty fair job of cleaning a lot of the mess up on the "regular"
bands...I wouold think it a lot easier to "police" with only very specific
modes and applications allowed.

Besides, if we move the traffic nets, etc, off the other bands, I don't
think the other ops would come to 60M anyway. Make 60M exclusive for Public
Service/Traffic Handling/ARES-type operations, and the rest of the unwashed
masses will stay away.

>>-- Should it be FCC policy to permit "talk shows" such as the K1MAN
>> transmissions on Amateur Radio.
>
>Only if they are done on a preannounced schedule.

And only if done on 27.185mHz, where he belongs.

"Larry Roll K3LT" <yodoc@aol.comnospam> responds:

> Permit any legitimate amateur activity EXCEPT contesting and DX
> nets.

Since it will almost certainly be a "US Mainland Only" band, not much DX to be had -- not even VE's or XE's. For the same reason, little or no contest interest.

What I'd hate to see is a takeover by the "3850" style yokels, or the lumbago nets now common on 80M. Since we're starting with a clean sheet of paper, it would be nice to go in with a plan which supports the aims of 97.1.

You are cordially invited, Larry, to ignore Subject Matters such as, oh, let's see "ur right Dwight" and "Leonard H. Anderson, Pathological Liar" where you know there is absolutely no discussion of ham radio going on. Improve your cognition--satisfy your desire not to see posts that aren't 100 percent ham radio.

Ya mean you're actually going to have some power to do something about your CW desires this time, Larry? Rather than the usual, boring, stuff--kind of like the same stuff you just griped about with Steve and Len? We know your feelings about CW--ignore most if not all your posts. What was it you said? "Give it up already" yeah, that was it.

The broadcasters would absolutely raise merry hell, they have huge
investments in frequency-defined gear which would have to be reworked
at serious expense. Fuhgeddit. MAYBE they'll grudgingly surrender
7.100-7.200. They are not gonna bail outta 7.200-7.300.
>
>
> b) 6.900-7.200MHz

There are signals on 6.800 - 6.900, 6.900-7.000 is an RF desert. The
interesting question in my mind being how we can get all these "type
accepted" radios to transmit below 7.000? Yeah sure, I know how to
snip the diodes on my archaic 940. But how 'bout the current crop of
xcvrs which have read-only BIOS chips which control the freq limits?
And the clueless owners of these whiz boxes who don't even know how to
pop the cases open to get inside the things let alone how to deal with
replacing SMT chips? Obsolete new radios. Nightmare. Bring it on . .

anybody out know where I can get a 40m ARC-5?

Me suspects that the commercials who covet those allocations are
already working overtime monitoring usage in order to justify gloming
them. We don't need the FCC working for them too.

Assuming you are right (which I don't accept), perhaps that would be
a good thing. It would incentivize people to do a little technical
exploration
(as in 97.1 b, c,and d). Or it might provide a nice little part time
business
for a superior electronics wizard like you.

If we are not prepared to wage total unconditional war in response to a direct attack on our homeland, then we invite continued attacks and a disaster on a scale that we can barely imagine. If 19 guys can turn 4 commercial airlines into guided missiles, then 19 more guys, each with a suitcase nuke, can destroy America. It is no longer enough for America to"warn" of dire consequences --- we must search them out and make horrific examples of them.

With all kind wishes,

Hans

Hans, sometimes we do get off topic a bit; certainly we often do not talk about the hobby per se on the air. Often it's "honey, don't forget the bread" on 2 meters or 440, but amateur radio includes many facets. I will agree, however, that some of the threads such as the boy scouts or morse code do get out of hand (and they are 'in topic' so to speak). With that, I will promise not to mention the war again and try and keep it to amateur radio.

Anyone know the propogation effects of a couple of 50 megaton hydrogen devices going off in the middle East?

Both Hans and Steve are right about what "policy" hams should be looking at. These issues -- much more than code/no code will determine the future of ham radio. Speaking of which, I have a sense that many folks are coming or going to code to take a shot at QRP. Some new techs are interested in learning so they can use it, not just so they can get HF. Just a sense, not a scientific study.

Dick Nï¿½BK,

Do you happen to know where one might find a history of US amateur
call sign protocol?

Some of my thoughts and questions ...

I know, for example, that at one time a Novice was issued a WN, KN
call which became a W, K, WA, KA, call when upgraded. That stopped
when?

What is the protocol for the N calls? I know that the A's are now
issued to Extra class. Was N ever class-reserved?

I always assumed that the 1x1, 1x2, 1x3 calls were just sequential
progressions, but I have been told that they are class-reserved. Has
it always been that way? Is there any significance other than sequence
for the 2x1 and 2x2's?

Not necessarily looking for the answers, just a resource or two.

Larry,

You think the FCC will even bother with an NPRM if/when S25.5 changes? I wouldn't be surprised if they just issued an order dropping Element 1. No NPRM, no comments, nothing. I hope I'm wrong on this, but the skids are well greased already.

>(under one proposal I read) to move up, also. The get an "exclusive" and we
>would too.

Ah, Steve, reread Hans' question. It was about which should the ARRL ask for as a worldwide exclusive allocation. The only reason to move the band is if it gets us exclusive territory.
>
>>Yes. 200 kHz worldwide exclusive is more useful than 100 worldwide exclusive
>>and 200 shared with highpower SWBC stations. Split the 200 kHz right down
>the

>
> I'd make it 80/120.
>
Why? Digital is up. Did you see the results from FD 2001? CW QSOs up, digital QSOs up, phone QSOs down, compared to 2001.

>>>-- Should it be FCC policy to permit only traffic, weather, public service,
>>> and other such nets on the new 60-meter band?
>>
>>Nope. No way to enforce it, anyway.
>
> I disagree that they could not enforce it, Jim. Riley et al have been
>doing a pretty fair job of cleaning a lot of the mess up on the "regular"
>bands...I wouold think it a lot easier to "police" with only very specific
>modes and applications allowed.

Enforcement by content is tough to do, if the content is legal. Suppose somebody starts a "60 meter emergency preparedness net" where hams from all 50 states are invited to check in. But suppose the net actually functions to manufacture QSOs for WAS. Is that worth policing?

> Besides, if we move the traffic nets, etc, off the other bands, I don't
>think the other ops would come to 60M anyway. Make 60M exclusive for Public
>Service/Traffic Handling/ARES-type operations, and the rest of the unwashed
>masses will stay away.

The problem is that if the band can't be used for many activities, like ragchewing, many hams won't bother to go there. The argument being made for 60 is not that it will take all the public service and emergency stuff, but that it fills a propagation gap between 80 and 40. If it is lightly used it won't fulfill its mission.

>>>-- Should it be FCC policy to permit "talk shows" such as the K1MAN
>>> transmissions on Amateur Radio.
>>
>>Only if they are done on a preannounced schedule.
>
> And only if done on 27.185mHz, where he belongs.

Who IS this guy, and what's the beef about him? I came across an AM station sending something called "newsline" a few days ago on 75 meters - was that K1MAN?

I understand this. The ARRL's proposal was that we move down, the
broadcasters move up and we both get exclusive "primary" allocations.

All three are too damn random looking. Make it 7.0-8.0MHz. Nice
round numbers are far more practical.

>-- If push came to shove, should we accept a worldwide allocation

Ok, then make it 6.0-8.0 so everybody can be happy.

>-- Should it be FCC policy to permit only traffic, weather, public service,
> and other such nets on the new 60-meter band?

Only if they'll add bitching-about-the-new-tests-not-being-hard-enough
nets there, and ban those discussions from all other bands.

>-- Should it be FCC policy to permit "talk shows" such as the K1MAN
> transmissions on Amateur Radio.

Not on the established 2-way bands, but how about a few small bits of
the broadcast band set aside for totally non-commercial amateur
broadcasting. No new tests, no fees, just request a frequency and
weekly time slot.

>-- Should it be FCC policy to periodically conduct occupancy monitoring
> of VHF/UHF amateur bands, and adjust those allocations based on
> observed usage?

Probably too much of a pain in the ass for the manufacturers to change
their band edges every time the FCC makes a new allocation, and their
products already on the shelf when a band is enlarged would likely
have to be sold at a loss if they couldn't be upgraded easily enough.

The real question is, what do the SWBC folks have to gain? They are not bothered by hams, even those running 1.5 kW PEP into three-element Yagis at 120 feet. QRP and a wet string compared to what they've got.

>They are not gonna bail outta 7.200-7.300.

It's a question of bargaining. I say ask for the whole thing (7000-7300 worldwide exclusive amateur) and then compromise down to something less than that but better than what we have now.

The manufacturers might actually be allies in that it would generate a market for new rigs and dealer-mods for old ones.

The nonsynthesized rigs, from the S-line to the 520/820 Kenwoods, just need a new heterodyne xtal and a realignment. An enterprising ham could make some bucks by having a batch of new rocks made for the popular BA rigs (Drake,

Heath, etc.) Some of the synth rigs will be lame ducks, though.

Oddly enough, the Elecraft K2 needs only a touch-up to the alignment, and maybe a new firmware chip, to do the job. The firmware in that box is all in sockets, too.

My Southgate Type 7 works down to 6900 right now.

> Bring it on . .
>anybody out know where I can get a 40m ARC-5?

Lot of 'em on eBay. BC-459. Or get a BC-458 (5.3 - 7.0 Mc) and tweak the trimmers. There may even be one or two in your storage bins...

I think the current proposal is not to segment the band by mode,
but rather let "market forces" decide, ala the top-band model.

Serious question, however -- why "no phone"?

My "kvetching" about Kim's call sign was an entirely legitimate,
appropriate, and necessary topic on this newsgroup. My reaction to
it has been validated by no less than Riley Hollingsworth, who, when
Kim attempted to trick him into endorsing her choice, pointed out that
by exercising her freedom of choice in a callsign, she actually
managed to take ham radio "...one step closer to extinction" by
reinforcing a negative image of ham radio operators. So, if you don't
mind my asking, "...but still..." -- what?

Kim:

Don't look now, but this newsgroup is by, for, and about people who wish to discuss the code testing issue, among other amateur radio policy matters. The thing you object to, like most other no-coders, is the fact that I call attention to the fact that the no-coder's primary objection to "CW" is (or was) the necessity to learn and master a useful communications mode in order to gain higher operating privileges. It's all about the basic issue of laziness and the Welfare State mentality vs. those who saw the value of the Morse/CW mode and found that once they gave it a try, they actually liked it and were able to succeed at it. My postings, over a decade's worth both here and on Fidonet, have been a reaction to the abject hatred of the CW mode expressed by the lazy people who saw it primarily as a barrier to HF phone privileges.

You haven't been here nearly long enough to tell me what this newsgroup is about, so I suggest you don't presume to try.

Nah, I agree with Jim, it's too much of a probable enforcement hassle.
There's no precedent for regulated qso content anywhere else in ham
radio, we'd wind up with scams galore and arguing abt interpreting the
reg, etc. The current philosophy of the FCC seems to be in the
direction of them setting the lower & upper band limits and telling us
to play nice and sort it out ourselves. I don't have any particular
problem with that.

Again, like so many of your previous postings, you misrepresent the position of those opposed to code TESTING, Larry. Yes, those opposed to code testing do feel it is absurd to continue the testing requirement to gain operating privileges - just like it would be absurd to require skill with a manual typewriter before one could use a computer in the home.

But that objection to code testing is saying nothing whatsoever about those who like code and want to use it - they will always be free to do so. And it also has nothing to do with a "hatred of the CW mode." It is a simple acknowledgment that radio has changed over the many years since code testing began and there is no longer a legitimate need today for that code testing requirement.

Your assertion that this attitude equates to laziness is also absurd. Things change with time, Larry. Is a person lazy because he uses a computer instead of that manual typewriter? I have no problem with a person using a manual typewriter, but not all should have to know how simply because he does. Is a person lazy because he uses an automobile today instead of walking? I enjoy a nice walk, but would think it very strange to be tested in that to get a drivers license. Why, then, would a person be "lazy" for choosing one of the more convenient operating modes, or for resisting continued testing for a mode that is no longer required to be a good radio operator today?

But, we do understand your feelings, Larry. You're an old fashioned guy that doesn't like many of the newfangled contraptions like SSB, microphones, push buttons, AC power, and so forth. But, at the same time, you also have to understand, and recognize, that the rest of us have moved into a new century looking towards the future, not living in the past. Why don't you come join us - you have nothing to fear but fear itself (as someone many years ago, which I'm sure you're familiar with, said)? :-)

By "but still..." meaning that you add to the chaos that you bemoan. If, as
you say, you want to make this newsgroup "more productive and less chaotic",
you should start with yourself.

Ah, and here's yet another testimony of your caring about ham radio. Well, I am just tickled to death that you're caring again, Larry.

"Trick" Riley Hollingsworth, huh? You don't give that man much credit at all do you? Or, you're not as smart as you pretend to be--because if you think Riley Hollingsworth could be "tricked" into endorsing a callsign, you have underestimated Riley.

I don't care what Riley Hollingsworth thinks of my callsign, nor anyone else. That should be quite apparent to you by now. You know damned well that the point I made with you (and to the idiot up in the NW) by writing to Riley was that the callsign was legal, valid, and could not/would not be revoked. You also know that I did that after *months* of your stomping around making innuendoes that you were going to write to the FCC and make sure that they took my callsign away, blah, blah, blah. I actually did something about it, while you just griped, complained, whined and snickered. Which, by the way, you continue to do.

Why in Hell's bells would I care about Riley's--or anyone else's--endorsement of my callsign?! I think everyone pretty much has the idea that I don't. And, that my callsign is detrimental to the amateur radio society is an opinion anyone is allowed to have. My opinion is that it is not.

Your attitudes expressed in here against people because of the simplistic argument you hold on CW is a whole other matter. If you spout off on the air to and about people as much as you do in here, Larry, you are far more trouble to the integrity of ham radio than anyone's callsign *ever* could be.

Larry, you're never going to learn are you? I don't *PRESUME* to try anything. I did it. Period. Except, you think that I am trying to tell you what you can and cannot discuss--which is your own twisted, evil little way of trying to thump the chest you think you have.

I always forget that I need crayons with you: I am suggesting that the next time you get onto someone for beating a dead horse topic; that you stop and think about your own beating of dead horses. But, if you want to continue to play the hypocrite--everyone else will be watching and laughing their asses off. OK, giggling...your antics aren't worth much more than that.

OHMYGAWD...

Brian: you are smarter than that, aren't you? What, exactly, do you hope to accomplish with a continuing debate, from anyone you can possibly engage, on the CW issue? CW and all its politics, etc., are one of those things that peoples' minds don't really change on...haven't you ever figured that out?

It's kind of like Coke and Pepsi. Why the hell do those companies advertise--at least to the extent that they do? Coke and Pepsi are mainstays in American life; and preferences are developed by family and friends--not their advertising.

CW and the politics that are generated because of it (for what reason people get so excited about I'll never understand and don't care to), are just that: nothing but politics. You're not going to change anyone's mind about CW, I'm not going to change anyone's mind about CW; you're not going to convince me any more than I've ever been convinced about anything to do with CW; and I'm not going to convince you any more than you're convinced on the different issues surrounding CW. It's a dead damned horse, through and through, and the meat's even begun to grow mold now.

Maybe it means something to the FCC and other governments in terms of policy in ham radio, but change is evident because of the times, Brian.

In article <77f1797e.0111011245.39da9e7f@posting.google.com>, kb9rvb@arrl.net (Carl Zager) writes:

>Do you happen to know where one might find a history of US amateur
>call sign protocol?

You might try searching deja.com for "The Past 50 Years of Amateur Radio Licensing", which has some info on this.

Briefly, it went like this:

After 1912, when licenisng of amateur stations became mandatory, callsigns consisted of a numeral (1 through 9) and two or three letters. A typical call might be 1AW or 3ZS. The numeral was determined by the location of the station, and if it moved to a different call area, the callsign had to change.

Other countries adopted similar schemes, which led to confusion as the range of amateur stations increased. About 1927 prefix letters were added. US ham calls in the 48 states all began with W (W6AM, W9AZS) and those in the territories and possessions with K and a specific number (K7ABC). Some possessions had two-letter prefixes (KG6GJX).

In addition to all this, when the licensing of mobile and portable ham stations first began, (early 1930s) special calls with four suffix letters were issued for portable and mobile use. W6AM was W6ZZAM when mobile under those short-lived rules.

Note that 0 was not used in US ham calls before WW2.

After WW2, the whole system was revised. The boundaries of the call areas were changed to avoid splitting states, and 0 was added. All of the territories and possessions got specific two-letter-and-a-number prefixes, and all of those prefixes began with K.

When the Novice class was created in 1951, special calls were used. In the 48 states, N or V was added before the number to indicate "Novice", and was dropped when the licensee upgraded. In the possessions, the initial K was changed to W to indicate Novice status.

When the W calls were all issued in some districts, the FCC went to K calls, then WA, calls, etc.

In the mid 1970s the FCC began issuing calls beginning with N and A, and calls with single-letter suffixes. The purpose of this was to increase the number of short calls available. Because the USA does not "own" the entire A prefix, all A calls begin with two letters. In addition, the requirement to change callsigns when moving to a new call area was dropped.

>Some of my thoughts and questions ...
>
>I know, for example, that at one time a Novice was issued a WN, KN
>call which became a W, K, WA, KA, call when upgraded. That stopped
>when?

Mid 1970s, when the Novice became renewable.
>
>What is the protocol for the N calls? I know that the A's are now
>issued to Extra class. Was N ever class-reserved?

The reservation is by call format. 1x2 and 2X1 calls of all types are only
issued to Extras. 1x3 calls are issued to all classes of license except Novice.
Calls beginning with A are only issued to Extras, even if they are 2X2.
>
>I always assumed that the 1x1, 1x2, 1x3 calls were just sequential
>progressions, but I have been told that they are class-reserved.

1x1 are special-event stations. 1x2 and 2x1 are Extra-only. 1x3 are available
to any class except Novice.

> Has
>it always been that way?

No.

>Is there any significance other than sequence
>for the 2x1 and 2x2's?

All 2x1s are Extras, All 2x2s beginning with A are Extras. I'm not sure about
other 2x2s, but I know that 2x2s are not issued to Novices or Techs.
>
>Not necessarily looking for the answers, just a resource or two.
>
I don't know of any single source, other than a big pile of QSTs or the CD-ROMs
of same.

Dwight, you have to think of the mentality you are trying to reason with. These guys live on sinking ships and they're going down with the ship and enjoying the ride.

Just like any expression people have that is different from theirs, from the CW issues, to Osama bin Laden, they use their "love of CW and God and Country" as some sort of weapon to be wielded against others for thinking any differently than they.

You're going to try and try and try to make them understand that you are not attacking their love of CW; that you are attacking their distaste for others who don't. They are never, ever going to see that.

Now, I am out of the CW discussion 1) because I truly don't give a hoot's ass about it; 2) because it's about the same as trying to make any sense and reasonability about the discussion we've been having on terrorism: the folks with whom we try to debate and reason with are beyond the ability to debate and reason. They enjoy more being armchair generals because that's all they got.

I don't think it will take only "most Americans" and I hope I am not stepping out on a limb here by *thinking* that you will understand the next fairly philosophical statements:

Like I said, I used to be a peacenik, trying to make a difference in the world. Then, I moved away from the peaceful seclusion of the Adirondack Mtns., and found out just how huge a task it would be to realize, by walking straight into the grips of huge city life down here in the south.

Nope, I am no longer willing to feel like I am in an extremely small minority of people who would like to see a different world and actually think I could do something about it. I have property; yearn for a bigger, better yard; ignore government (and the rest of the world) for the most part; don't think twice about paying taxes--just tell me how much I owe; just bought a foreign vehicle--ask me if I care; and truly don't care about people as much as I used to--because I got tired (once again) of pretty much being in such a small minority. I often review my emotions and check for bitterness--but I really don't think I am bitter at all, that would be pretty silly. I am just 'resigned'.

Well, let's word that differently: I still care a great deal about people in terms of a collective "we"; but on an individual basis it's a whole lot more effort to deal with than I am willing to. I have *maybe* 10 friends (not counting family) and I actually choose it to be that way. I have no "true" friends other than my husband and my parents. I am just not willing to be the person I used to be with people. As an example: why would I put myself through constantly listening to people gripe (and so, so many do) about their marriages/jobs/kids/financial situations while they choose not to do a damned thing about it? After a while, the stories and the attitude get old

(goodness, just look at this newsgroup). I am a "talk to the hand" person real quick. Peoples' tendencies are to gripe, not to change. And, I still dearly love Mother Earth--though I am far less proactive even on that any more.

I got a little confused a long time back--I had a rooted belief in the basic principles of Christianity and started exploring the beliefs of the Eastern philosophy--which I find absolutely fascinating. The Eastern Philosophies made me yearn for a deeper commitment to my basic principles; however all this began happening at the same time I needed to make a choice as to live like a poor person (stay up north in the country and try to do with what I could through the oil crisis of the 70s) or "make something of myself" for my kids and family and move down here to the south. I chose the larger distraction and now use it as an excuse for being a realist. :)

My ultimate belief is that God will straighten it all out by starting over again. My Karma is bad, bad, bad, but hopefully some kind of credit will be realized for deep-seated passion and desire.

Willing? Not by myself--not as a tiny, tiny majority. Count me out--as disgusting as that is for me to even think about, I made my peace with it years ago.

There is a movement to divide 160 into mode subbands, like the rest of HF. FCC recently went after some SSB users for deliberate and malicious interference to CW folks on 160. See the FCC enforcement letters on the ARRL website.

The lack of mode subbands on 160 is an artifact of the days when the band was shared with LORAN and was allocated in little 25 kHz slices to various regions, with day and night power limits and all sorts of gunk. That's a thing of the past, now.

> Serious question, however -- why "no phone"?

Somebody made a comment about the 3850 bunch, lumbago nets and other stuff they didn't want to see moving to 60 meters. Since all that stuff is pretty much confined to 'phone, the answer seems clear.

Plus 30 meters has no 'phone, either.

One question is how wide such an allocation would be.

When was *that* ever an issue? Of course your callsign is legal, valid,
and will not be revoked by the FCC. Nobody, least not I, ever expressed
such a desire. If your callsign were not legal, it would not have been
issued -- that should be obvious even to a person of limited cognitive
ability, such as yourself.

>You also know that I did that after *months* of your stomping
>around making innuendoes that you were going to write to the FCC and make
>sure that they took my callsign away, blah, blah, blah.

You really are much more delusional than usual today, Kim. When did
I ever state that I was going to ask the FCC to revoke your callsign?
Please provide fully attributed quotes, or admit that you are a liar.

>I actually did
>something about it, while you just griped, complained, whined and snickered.
>Which, by the way, you continue to do.

Yes, what you did was to write to Riley and attempt to trick him into
endorsing your choice of callsign based on your "right" to do so. And,
like I have before, he admitted that you do have a clear right to select such
a call sign, in spite of it's unsuitability in a family-oriented radio service.
Which is why he said, that when someone with young children encounters
you and your callsign on-the-air, and decides to choose another activity
other than ham radio, you have taken our hobby/service "...one step closer
to extinction."

>Why in Hell's bells would I care about Riley's--or anyone
>else's--endorsement of my callsign?!

Well, you obviously did at one time, so much so that you attempted to
trick him into giving it, on the basis of your "right" to "freedom of

expression." You were grasping at any straw you could possibly reach, in order to justify your callsign, which is demeaning to yourself, the ARS, and women in general, in the hope of denying it's corrosive effect on all concerned.

>I think everyone pretty much has the
>idea that I don't. And, that my callsign is detrimental to the amateur
>radio society is an opinion anyone is allowed to have. My opinion is that
>it is not.

Of course you think that way. That's the same muddy thinking that caused to select your callsign in the first place. We understand perfectly; no need to belabor the obvious.

>Your attitudes expressed in here against people because of the simplistic
>argument you hold on CW is a whole other matter.

My "argument" on "CW" is, and always has been, that it is a valuable mode to the ARS, and that the testing requirement is the vehicle which brought it into widespread use among hams. My more contentious postings have been directed at those who object to the testing requirement on the basis of their unadmitted laziness.

>If you spout off on the
>air to and about people as much as you do in here, Larry, you are far more
>trouble to the integrity of ham radio than anyone's callsign *ever* could
>be.

All I'm doing is expressing an opinion in which I truly believe. You, of all people, should understand this, were it not for the fact that you possess a child-like need to be right in spite of the self-serving nature of your opinion. My opinions are based on what's best for the ARS; your opinion is based on what's best for YOU. There's a big difference here, one which you, apparently, do not possess the emotional intelligence to understand.

AMATEUR RADIO NEWSLINE(tm) REPORT #1264 – NOV. 2, 2001

==========

A NOTE TO THOSE WHO ONLY “READ” AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the “spoken word.” It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Three methods of delivery are available: Streaming audio using RealAudio, FTP RealAudio or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to audio servers providing our voice newscast (for free). We think you will find the time you spend listening to be a rewarding experience.

de
The Amateur Radio Newsline(tm) Production Team

==========

Amateur Radio Newsline report number 1264 with a release date of Friday, November 2nd, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Hand held radios to Antarctica, Georgia to host the 2002 United States Amateur Radio Direction Finding championship games and the F-C-C takes action on illegal C-B radios. These stories are first on Amateur Radio Newsline report number 1264 coming your way right now.

HAM RADIO TECHNOLOGY: IRLP REACHES ANTARCTICA

Imagine picking up your H-T, calling your friend and asking him how the weather is. He responds with a crisp clear signal and tells you that its 70 below Zero and snowing. Outside your window the thermometer says its 80 and you plan a day at the beach. Welcome to the world of Internet Repeater Linking as the system expands its global coverage to Antarctica. Nate Dueher, WYZ0X, has more from Denver Colorado:

--

The Internet Radio Linking Project has come to Antartica. On October 23rd, Chuck N0NHJ, set up the first Internet radio link on the continent. A few days

later we caught Chuck and a few other hams on the air to ask him a few questions. Let's listen in...

Terry, N0PQV in Denver, Colorado was the first to say hello:

--

[recording]

--

I got a chance to ask a question of Chuck that I wanted to know. Chuck, how many hams are on the station and how many are active on
IRLP?

--
[recording]
--

And yet another question from Ian, M0CJY in Rottherham, Yorkshire, England...

--
[recording]
--

One of the other questions we had was Justin KC0LBH who wanted to know all about that famous Anartic daylight:

--
[recording]
--

That's all we have time for today. If you'd like more information on the IRLP project on the World Wide Web, go to www.irlp.net. This is Nate Duehr, WY0X reporting.

--

Once again, if you are interested in tying your repeater to the Internet Repeater Linking Project go to www.irlp.net on the world wide web. (NY0X, ARNewsline(tm)) {This complete very ecxciting QSO is available in RealAudio at www.arnewsline.org on the FTP transfer page}

RADIOSPORTS: ATLANTA TO HOST NEXT US ARDF CHAMPIONSHIP GAMES

The South-East will host the next United States 2002 Amateur Radio Direction Finding competition. Newsline's Joe Moell, K0OV, tells us where and when the event will be held.

--

The Georgia Orienteering Club has been selected to host the second USA Radio-Orienteering Championships, to take place April 19-21, 2002. The competition will get under way near Atlanta on Friday afternoon with a practice

event, followed on Saturday by the main two-meter hunt and on Sunday by the 80-meter hunt.

In addition to the hunts, there will be a cookout on Friday evening, a dinner on Saturday night, and an award ceremony following the 80 meter hunt, all included in the registration fee. Lodging options include cabins in the park and campgrounds with RV hookups. There are also many local motels and bed-and-breakfast inns.

Standard international rules will be used for these foxhunts, which are all on foot in beautiful woods near Callaway Gardens. The Championships are open to anyone, beginner or expert.

Slovakia will host the next World Championships of foxhunting in fall 2002. Positions on USA's team that will travel to these championships will be determined by individual performances in the Atlanta event, as well as in last summer's USA Championships in Albuquerque.

It's not too early to start making plans to attend the second Radio-Orienteering Championships near Atlanta. For more details and registration information, see the official Championships Web site. The exact URL is rather long, but you can get there in just a couple of clicks by going to my foxhunting Web site: www.homingin.com. That's "homingin" -- as one word -- homingin.com. Or you can write to me at my callbook address.

From sunny southern California, where foxhunters are already practicing for the championships, this is Joe Moell K0OV, for the Amateur Radio Newsline.

--

Again, the web address for more information is www.homingin.com. (ARNewsline(tm), K0OV)

**

ENFORCEMENT: FCC VS ILLEGAL CB SETS

The FCC has gone after some illegal gear seemingly designed for operation on the Class D 11 meter Citizens Band. This, as it issues a citation to an alleged supplier of the equipment in Oregon. Amateur Radio Newsline’s Norm Steely, KI7UP has the details.

--

In its September 17th letter to Truck-n-Travel and copied to its owner, Eugene Trucking Haven, FCC Portland Oregon Resident Agent Ben Nugen leaves no doubt as to what is going to happen. Either stop selling non-FCC Certified radio gear or the consequences.

His letter states that last July 23 that agents from the FCC observed uncertified Citizens Band radios displayed and offered for sale inside the Truck-n-Travel located on East Pearl Street in the city of Coberg. The FCC says the radios included four models from Galaxy and one from a company called Delta Force. The Commission says its records show that one of these CB sets

have been granted an FCC equipment authorization. It warns Truck-n-Travel that the marketing of these CB radios, or even just advertising them is a violation of Sections 2.803 and 15.101 of the Commission’s rules. It tells Truck-n-Travel that it can fine them up to $10,000 per violation per day and that can go on to a maximum of $82,500.

The letter then gives Truck-n-Travel the same warning that numerous ham radio violators have received over the past several years. It tells the company that, in accordance with Section 503(b)(5) of the Communications Act, it has 14 days from the date it received the citation to submit any statement it has to make concerning the alleged violation. And the FCC adds that the Commission staff will use all relevant material information it has -- including information disclosed in the Truck-n-Travel reply to determine what, if any, enforcement action is required to assure current and future rules compliance.

--

More on this case as information is made available. (FCC)

**

ENFORCEMENT: NY REPEATER UNDER SCRUTINY

The FCC has told a repeater owner to explain the operation of his machine. A repeater that FCC Special Counsel Riley Hollingsworth says is on the air all by itself:

--

Hollingsworth: “We opened an audit of a repeater opewrating in Elmhurst New York, KB2PRV, after our evidence showed no identification, no appart control operator, and no apparent coordination.”
--

Hollingsworth says that the letter of inquiry went to Ramon D. Florimon who holds the KB2PRV callsign. He was given 30 days from reciept of the October 2nd letter to respond to the FCC. (FCC)

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the Southern California Amateur Teleprinter Society net serving West Covina California.

(5 sec pause here)

**

RADIO REGULATIONS: FCC CLARIFIES FUTURE OF CORES

The FCC's Wireless Telecommunications Bureau has clarified several issues regarding Amateur Service implementation of the Commission Registration

System--or CORES. The ARRL Letter says that starting December 3, everyone doing business with the FCC--including amateur licensees--must obtain and use a 10-digit FCC Registration Number when filing.

Amateur licensees now registered in the Universal Licensing System or U-L-S already have been cross-registered in CORES and issued a FCC Registration Number by mail. The FCC said it planned another cross-registration by November 28th. Amateurs can check to see if they have an FCC Registration Number via a U-L-S license search. Many Internet call sign servers, including ARRL's, also can provide this information. (ARRL)

**

RESCUE RADIO: JUNGLE RESCUE ASSIST

Ham radio played a role in reuniting with his family a man who had been hiding in the jungles of Guatemala for over three decades. The C-Q Magazine website reports that 72-year-old Salomon Vides of El Salvador emerged from the Guatemalan jungle recently after hiding there for 32 years from a war that lasted about 100 hours.

In 1969, El Salvador invaded Honduras and Vides, a migrant worker, ran into the jungle to escape retaliatory raids. The Organization of American States quickly brought the war to an end, but Vides says he never got the word. He was discovered in August by Rene Sonabo, a taxi driver and Guatemalan ham radio operator, and Sonabo’s son. After persuading Vides that no one was trying to kill him, Sonabo used his amateur station to relay the news to Vides’s stunned family in El Salvador. He has since been reunited with his brother, but the family had not been able to locate his wife and three children. (CQ)

**

THE LAW: THE COST OF ATTACHING TO POLES

The United States Supreme Court is examining a complex Internet case that could eventually affect the availability of online services and what most people pay for them. The court is expected to rule by next summer on a fight over the cost of establishing and maintaining some Internet and wireless networks.

Specifically, the fight concerns the rent that cable television companies must pay utilities to attach wires for high-speed Internet service to the utilities' poles, and whether the Federal Communications Commission can control the rate. The justices also will consider whether cellular telephone companies are entitled to pay government-limited rates for attaching their equipment to utility poles.

A federal appeals panel ruled last year that the FCC does not have the authority to regulate pole rental rates for Internet service. The FCC claims Congress intended it to have that power. The Supreme Court will decide. (Published News Reports)

**

REPEATER OWNERS ATTENTION: RADIO TOWERS FOR SALE

Are you a repeater owner or a club that operates a repeater? Have you ever dreamed of owning your own mountain-top or high rise repeater site? Well if you have, listen up.

In an e-mail to Amateur Radio Newsline, Tom Swierczewski, the Zoning Representative for American Tower Corporation says that the company has several hundred communications towers for sale throughout the United States. According to Swierczewski, sites vary in height from 100 to 400 feet tall and many include large buildings.

If you or anyone you know is interested in this or if you want to receive additional information on specific tower sites, please contact Swierczewski at American Tower Corporation. The information you need to do this is in the printed edition of this weeks Amateur Radio Newsline report. More information is in cyberspace at www.americantower.com.

(Contact information: 1101 Perimeter Drive, Suite 225, Schaumburg, Illinois 60173. His phone number is 847-240-1508 X 663 - Central US time. E-mail is thomas.swierczewski@americantower.com.) (Tom Swierczewski)

**

HAM RADIO BUSINESS: VK MAGAZINE BITES THE DUST

Another failure in the international ham radio marketplace. This, with the announcement that Australia's longest-running electronics magazine has ceased publication.

Victoria’s A-P-C News reports the current issue of Electronics Australia Today will be the last and it’s a decision saddens many V-K amateurs. This is because many generations grew up building equipment from circuits published in the magazine.

Electronics Australia Today traces its history back to Wireless Weekly, which started in 1922. Radio and Hobbies was formed out of Wireless Weekly in 1939. This was renamed Radio Television and Hobbies in the 1950s and Electronics Australia in 1965. (APC News)

**

HAMVENTION 2002 UPDATE: HAMVENTION TO HONOR THOSE WHO PERISHED ON SEPTEMBER 11, 2001

The Dayton Amateur Radio Association will honor the memory of those killed in the September 11th terrorist attacks and the hams who then volunteered their services to the nation by dedicating the 2002 Hamvention to the theme of Emergency Preparedness. In a letter to potential vendors, the Hamvention Planning Committee said that it was very concerned over the terror attacks and believes that emphasizing the emergency communications aspect of ham radio was a very apropos way to honor those lost in the tragedy.

The letter also contained another rather surprising announcement. The Hamvention planners say that they will limit the number of non-ham radio booths normally purchased by those in the computer industry. In fact, the letter makes it clear that the only computer related vendors permitted to the inside

display area will be those whose products directly relate to Amateur Radio.

This will be the 51st annual Hamvention. The venue remains the HARA Arena just North-West of downtown Dayton. The dates are May 17th, 18th and 19th, 2002. More information is on the web at www.hamvention.org (DARA)

**

RADIO MILESTONE: NRCDXAS AT #200

The National Radio Club's D-X Audio Service will have its 200th issue available this month. Founder and producer Fred Vobbe, W8HDU says he does not think that is a bad record for what he describes as a little audio based magazine talking about broadcast radio that was started in April 1985. We say, congratulations to Fred and to the National Radio Club's D-X Audio Service on this milestone. (W8HDU)

OUR HERITAGE: HELP RESTORE THE LST-325 RADIO ROOM

Bob Wilder, AF2HD, is part of the team that's restoring the LST-325 Radio Room and he needs your help. Bob says that most of the radio equipment needed for the restoration of the radio room has been found. Also, they have received a donation from a trucking company in the east who is going to pack and ship the stuff on that side of the country and transport it to Mobile Alabama where the work is taking place.

Unfortunately, some of the gear is on the West Coast. It took $190,000 to perform all the work needed to repair the ships hull, front door and ramp, as well as to sandblast and paint the ship. As a result, cash is short.

Bob says that what's needed now is to receive a donation by some west coast trucker or person who can help getting the equipment out there packed and shipped eastward. At least as far as Dallas where the East coasts trucker can move it to Mobile.

Wilder says that Fred Chapman, W4CHT is coordinating the move. If you can help -- or at least direct the group to a trucking company willing to make such a donation, please contact W4CHT by e-mail to nnn0ppe@infi.net . Bob Wilder can be e-mailed at bwild@earthlink.net (AF2HD)

**

HAM RADIO IN SPACE: HAM RADIO BALLOON LAUNCH DECEMBER 1ST

Arizona Near Space Research says that it will launch a ham radio carrying balloon on December 1st, weather permitting. The group had hoped to launch from a local hamfest but the urban location of the event is in enhanced Class B airspace which is currently off limits. Instead, a monitoring station will be at the hamfest event. Full information on the flight can be found on the Superstition Amateur Radio Club website. It's in cyberspace at www.qsl.net/wb7tjd. (Superstition Amateur Radio Club)

**

HAM RADIO IN SPACE: LOTS OF HAMS TALKING TO THE ISS

And while on the subject of Amateur Radio in space, hams world-wide are excited about being able to talk to the International Space Station fairly often these days. This is because Commander Frank Culbertson tries to get on the air for general Q-S-O's whenever he can. And he recently had one with Berto Willems, ON1CAU, who had his tape recorder rolling. Take a listen.

--
Audio Only - No Text Available (Download Newscast Real Audio File at www.arnewsline.org)

--

ON1CAU says that contact took place at about 15:25 UTC during the recent Scouts Jamboree on the Air. And obviously signals were 5 9 full quieting – both ways. (ON1CAU, AMSAT BBS)

**

SPACE EXPLORATION: 2001 A MARS ODYSSEY - A SUCCESS

NASA's 2001 Mars Odyssey spacecraft was safely inserted into orbit around the red planet on October 25 th. This, slighly over two years after the space agency suffered back-to-back failures by Mars missions.

Odyssey arrived nearly directly on its target - 480 miles above Mars' surface. No orbital insertion or areobraking problems were reported by ground controllers. 2001 - A Mars Odyssey is the space probe that hams had been invited to track when it was launched earlier this year. (NASA)

**

INTERNATIONAL: NZART STRAIGHT KEY NIGHT

The first ever Straight Key Night in Kiwi-Land is slated to be held on the evening of Sunday November 4th. Operation will be limited to 80 Meters from 8pm until 11pm local New Zealand time.

The event is sponsored by the New Zealand's Amateur Radio Transmitters which says to lubricate that old Morse key and enjoy an evening of old time radio fun. NZART it will be an activity night in which everyone can be a winner with a certificate to prove it. For more information visit www.nzart.org.nz on the world wide web. (NZART)

**

DX

In D-X, Gary Halstead, K8KFJ in West Virginia reports a top notch trans-Atlantic QSO on 6 meters. On October 23rd at about 13:50 U-T-C Gary contacted CN8LI in gridsquare IM64. The Q-S-O took place on 50.130 MHz with K8KFJ running 100 watts to a M2 loop at only 20 feet. Gary lives in grid EM98 in the Charleston West Va. area. (VHF Reflector)

Also, Reid Hill, KC5YKX of Corpus Christi Texas says by way of the VHF Reflector that he will be doing VHF - UHF Century Club QSL card checking at the South Texas Amateur Radio Club annual Hamfest on November 10th. Reid also says that Mark Mireles, AD5CA will be doing the Worked All States checking at the same event. The Hamfest will be held at Swanter Park in Corpus Christi. Festivities start at 8:00 AM and go to at least after lunch. Contact Reid by e-mail to kc5ykx@swbell.ne if you need card checking but can not attend this event. (VHF Reflector)

**

THAT FINAL ITEM: NEW LOOK TO THE G4NJH PAGES

And finally, a regular voice heard here on the Amateur Radio Newsline is that of Jeramy Boot, G4NJH, in Nottingham England. And over the past several years Jeramy has become known the world over as the Internet voice of the Radio Society of Great Britain’s’ weekly GB2RS newscast. But you may not know that Jeramy is also a webmaster in his own right. In fact he hosts a very popular U-K cyberspace address. We invited him to tell you a bit about its past and where it is today:

--
Audio Only - No Text Available (Download Newscast Real Audio File at www.arnewsline.org)
--

Obviously the next question is where to find the G4NJH web pages. They are actually located at www.innotts.co.uk/~asperges. But don’t worry if you did not have the time to copy it. Just go to the links page at www.arnewsline.org and click on G4NJH. (G4NJH)

**

NEWSCAST CLOSE

Nope, your opinions are based upon *your opinion* of what's
best for the ARS, not upon what is best for the ARS in
objective reality. That's a big difference. You could be
completely wrong and IMO getting your wishes would lead
to the slow death of the ARS through attrition.

That's correct.

>The thing you object to, like most other no-coders,
>is the fact that I call attention to the fact that the no-coder's primary
>objection to "CW" is (or was) the necessity to learn and master a useful
>communications mode in order to gain higher operating privileges.

That's incorrect.

That's a Larry tRollism (practically a macro) which is colored
by tRoll's own love and devotion to OOK CW.

The FCC does not share the same feelings.

>It's all about the basic issue of laziness and the Welfare State
>mentality vs. those who saw the value of the Morse/CW mode and
>found that once they gave it a try, they actually liked it and were
>able to succeed at it.

On the other hand, the "laziness and Welfare State mentality"
has infected those who have long since been tested at CW and
haven't learned much else...and are determined to dumb down
everyone to their level.

>My postings, over a decade's worth both here
>and on Fidonet, have been a reaction to the abject hatred of the CW
>mode expressed by the lazy people who saw it primarily as a
>barrier to HF phone privileges.

What "abject hatred" of CW? What is (or rather should be)
discussed is the morse code TEST.

God did not appear to some ancient amateur Moses and
proclaim that amateur radio licensees be given privileges
commensurate with morse code skill. Ancient amateurs
proclaimed that, got it, and now there is time for a change.
Most of the ancient amateurs have gone SK.

Quit beating around the burning bushes and start accepting
change.

>You haven't been here nearly long enough to tell me what this
>newsgroup is about, so I suggest you don't presume to try.

Oh, my, "tenure" in a newsgroup as a qualifier for "truth!" :-)

>The only person who fits that description is you, Len.

On a thread involving Smith Charts I did jump in and talk
about them without needing a week to "research" the
material and make up some "examples" of use.

>You've done more than that. You want an age limit of 14 for any amateur
>license, and a reduction to a single class of license.

That is all public knowledge...but taken out of context from
my 13 January 1999 14-page-text Comments on 98-143.

My suggestion to the FCC on age limits was the LAST item
in those 14 pages, prompted more by the (referenced) "news"
from the ARRL of two six-year-old new amateur licensees.

The main part of my Comments on 98-143 concerned the
elimination of the morse code test for any class amateur
radio license, followed by the elimination of the "class"
distinction to eventually lead to only one license.

>Yep. And they have posted reasons for that opinion. Is it forbidden to
>disagree?

Why does Miccolis project his own feelings on this?

I've never said that Miccolis is "forbidden" to disagree.

>Is that why you abuse those with the audacity to disagree with you and point
>out your logical errors?

Who is "abused?" Those with overwhelming egos who insist
on being the Final Judge of what is "good" and what is "bad"
in opinions?

>Nope. The distortion is yours. You just equated code test with "code lovers".
>Not the same thing. But it shows your hatred of the mode itself, not just the
>test.

Incorrect "showing." I've said repeatedly that those who favor
morse code USE should be able to enjoy that mode as long as
it is allocated. No one favoring the retention of the code test has
yet claimed anything logical or regulatory for its retention...only a
lot of personal feelings that cite the implicit need for it on the
tacit opinion that "they had to do it, so everyone else has to."

>>No. Incorrect. Retention of old regulations with the only
>>reasons given as personal desires are not good...those
>>are selfish.
>
>The only reasons for removing the test are personal desires.

Then the Final Judge has "ruled" that both the FCC and IARU
are "wrong." (not a good judgement call)

>> FREEDOM is not a bad word.
>
>Neither is RESPONSIBILITY. Neither is TRADITION.

How is the morse code test related to "responsibility?"

Does it show something "to the ARS community" that a
prospective licensee is "worthy" of a license? No. The
"ARS community" does not, cannot grant amateur licenses.
Some turnips in the "ARS community" insist they do but
then they are rooted in the local ground and will eventually

wither and die without doing anything productive.

"Tradition" keeping is not a task of the FCC. If it were, then
"tradition" should insist on keeping damped-wave RF
generation, should it not? It was the very first practical
method of RF generation by radio amateurs.

>What alignment? Where is that alleged alignment documented?

It is firmly locked-in to those who consider morse code skill
as the epitome of the amateur radio experience. See the
oft-repeated trolling messages of:

"No code = No ham Know code = Know ham."

>I've only told you that many, many times since December 1999. The code test
>issue is a dead duck, finished, finito, end of story.

...a turnip thinking that others are turnips. Tsk, tsk, tsk.

Sorry, but the "code test issue" is NOT a "dead duck." The FCC
IWG-6 had not yet decided on it as of last week. The IARU had
not changed its position until the beginning of October, 2001. The
IARU is not permitted a vote in any WRC, but the FCC is one
agency of three that represent the USA administration.

>Nope. Spin and twist from the spinmeister. The mere fact that a regulation is
>old doesn't mean it is no longer needed.

The fact that a regulation is old does not mean that it should be
retained.

>but I wanted to clarify that which was unclear.

Was there something "unclear" in what I said? As far as history
is concerned, the split of Germany into "east" and "west" was
due to the Communist influence. The Communists built "the
Wall," not the "west."

In an abtuse way, I liken the on-going morse code test issue to
that "Wall." Those who have established their "turf" in amateur
radio keep insisting that all who enter the sacred kingdom below
30 MHz must "present papers" on going through the "checkpoint."

I think everyone knows what happened to that infamous "Wall."
:-)

>>The rest of your sentence is pure rubbish. Not even grammatically
>>correct.
>
>However Miccolis rephrases the above or repeats it, it is not
>a qualifier.

Doesn't need to be. Truth is truth.

>>Never said I do. Where do you get such ideas?
>
>From Miccolis' own statements taken in context rather than
>his taking others' statements out of context.

From which statements? I have read both sides of tis ongoing thread, and nothing you ahve accused Jim of is apparent. YOUR lying and attempts to discredit him are...THAT'S transparent.

>>Sounds like you are against free speech for those who disagree with you or
>>your ideas. Double standard.
>
>Not at all. Miccolis seems to wish to be the Final Judge as
>to the "truth" in opinions...namely his opinions.

He doesn't need to be a "judge" (there you go quoting things others have not said again). Truth is truth. You have not disproven a single thing Jim has said. Jim on the otherhand HAS proven his knowledge of Smith Chart, et al.

>>The subject was about your misquote and false attribution. Stay focused.
>
>I don't think so. It is mostly about ego-bruised pique at not
>being honored and revered as the Final Judge for opinions
>as to their "truth" or "falseness."

Nothing is "ego-bruised" or "piqued". Defending one's self against lies and misrepresentation from someone who is obviously doing both for arrogance sake is part of human nature and is only fair.

You lie and misrepresent...we prove why you are wrong...It's like sunrise and sunset. It's going to happen.

>Many licensed turnips post in here.

And at least one UN-licensed one.

>Those who are without fault seem not only to have stowed
>thrones but sit on them and attempt to rule...

Yep...from the Left Coast, to boot....

>>Don't look now, but this newsgroup is by, for, and about people who
>>wish to discuss the code testing issue, among other amateur radio
>>policy matters.
>
>That's correct.

Ergo you have now admitted that this NG IS for other policy matters that involve Amateur Radio. In previous posts you have adamantly stated that the ONLY topic here was the Morse Code issue.

>>The thing you object to, like most other no-coders,
>>is the fact that I call attention to the fact that the no-coder's primary
>>objection to "CW" is (or was) the necessity to learn and master a useful
>>communications mode in order to gain higher operating privileges.
>
>That's incorrect.

No it's not. You have stated so before.

>The FCC does not share the same feelings.

They don't have to. This about OUR opinions, not the FCC's. That we will have to live with thier ruling is inevitible, but does not mean we cannot express alternate opinions.

>What "abject hatred" of CW? What is (or rather should be)
>discussed is the morse code TEST.

One canot be discussed without the other. We KNOW what YOR motivation is.

>Quit beating around the burning bushes and start accepting
>change.

Cute. Words YOU should live by...Like taking advantage of the No Code Technician created for you almost 11 years ago.

And since YOU are the catalyst, I guess we have YOU to thank, Huh Lennie?

>>Then I'm not bragging at all.
>
>There has been NO proof presented accept some more
>unverified claims...along with a great deal of anguished
>argumentation about such claims not being believed.

Sure there has...Jim's discussions on the actual USE of the Smith Chart,
for example. Just for one.

And speaking of "unverified claims", where is your tutorial on microwave
techniques? Still NO evidence that YO posses any of the knowledge or skills
YOU lay claim to.

>Fish stories are still fish stories, even after the fish has
>been eaten.

And some fish-story tellers just SMELL fishy.

>On a thread involving Smith Charts I did jump in and talk
>about them without needing a week to "research" the
>material and make up some "examples" of use

Prove it. You never seem to post anything "meaningful" without at least a
several-day "absence" preceeding it. Boning up, Lenie?

>>You've done more than that. You want an age limit of 14 for any amateur
>>license, and a reduction to a single class of license.
>
>That is all public knowledge...but taken out of context from
>my 13 January 1999 14-page-text Comments on 98-143.
>My suggestion to the FCC on age limits was the LAST item
>in those 14 pages, prompted more by the (referenced) "news"
>from the ARRL of two six-year-old new amateur licensees.

What's taken out of "context", Your Putziness? Did you or did you not
suggest to the FCC that they create a totally new barrier to Amateur licensure
that has been totally unnecessary in over 80 years of Amateur Radio existence?

Your rants are, allegedly, about removing percieved unnecessary barriers
to licensure, yet you create a totally new one.

And you STILL haven't told us of your PRACTICAL experience in raising kids
that would lend any credence to your suggestion. Maybe children YOU raised
were not mature enough to handle that responsibility, but then I would not be
surprised.....

>The main part of my Comments on 98-143 concerned the
>elimination of the morse code test for any class amateur
>radio license, followed by the elimination of the "class"
>distinction to eventually lead to only one license.

AND...creation of a new artificial and unnecessary barrier to licensure,
seemingly based soley on some age bigotry. Still unfounded nor adequately
explained.

>>Yep. And they have posted reasons for that opinion. Is it forbidden to
>>disagree?
>
>Why does Miccolis project his own feelings on this?

He could project someone ELSE'S feelings?

>"No code = No ham Know code = Know ham."

You are finally showing some sense, Lennie.

>>I've only told you that many, many times since December 1999. The code test
>>issue is a dead duck, finished, finito, end of story.
>
>...a turnip thinking that others are turnips

What "turnip"...??? The FCC has (while not using YOUR adjectives) said
that when S25.5 is gone, so is code testing. YOU are the only one not
accepting it, Your Gameiness.

>The FCC IWG-6 had not yet decided on it as of last week.

I guess the other "representitives" at WRC have no vote? Lack of
subscription to Amateur related publications has left you (again) lacking in
the current events arena.

>>Nope. Spin and twist from the spinmeister. The mere fact that a regulation
>is
>>old doesn't mean it is no longer needed.
>
>The fact that a regulation is old does not mean that it should be
>retained.

What does your frequent abuse of the King's English have to do with the
"age" of Amateur regulations?

Not a bad idea. Actually though there are licenses available out there
already for doing that on a qrp basis in the FM broadcast band.
Problem is that the likes of k1man wouldn't go for it because their
intent is to make a mockery of ham radio so they gotta do their thing
on the established ham bands.

As I recall, you never actually said it would or could be revoked--there was
lots of innuendo about it. And, quite regardless of whether it was an issue
or not, the fact still remains that you're making some kind of tort about my
"tricking" Riley. That is just ludicrous.

> >

You're right about it being a valuable mode to ARS. I don't agree with it being included as a testing requirement. I may have said it incorrectly before, Larry, and used the word "wrong." But, notice the lack of my telling you that you are wrong. I just simply say I don't agree with you.

There may be further discussions, but I doubt they will
be lasting or lenthy. The train is flying down the track
towards the end of code testing as a requirement. The
path is clear, the route is clear, it's just the need to pass through
various stops along the way to the final treaty decisions
at WRC2003 followed by individual actions by individual
countries.

The FCC has been clear enough on what rational
keeps even 5 wpm in US regs now and that is only the treaty
requirement.

Cheers,
Bill K2UNK

You know, this has bothered me ever since I first saw the Berlin Wall (actually plural "walls"). There were two walls running parallel to each other - one built by the east and the other built by the west. There were two check points at each border crossing - one operated by the east and the other operated by the west. And there were two sets of guard towers - some built by the east and the others built by the west. And there were arrests on both sides of that border - east germans arrested anyone sneaking in or out of the east and west block troops arrested anyone sneaking in or out of the west. And, in areas without a real wall, there were two parallel fences guarded on each side by troops from the east or west. So, the concept of the wall may have started with the Soviets, but we certainly jumped on the bandwagon when the building actually began.

Larry, what is it with your obsession with Kim's callsign? Is it because she is a woman? Is it because a woman selected a callsign that vaguely relates to a part of the female anatomy? I seriously doubt you would be complaining so hard if that callsign were randomly issued by a computer to a man. So it is not the letters "TIT" in the callsign that you find so objectionable - it is the fact that those letters were selected by a woman. And perhaps this particular woman (Kim) does not find the female anatomy, or a reference to that, as objectionable as you do. So why should your view be given any more weight than hers - after all, she has to live with her anatomy each day while you can only obsess about it?

Okay, I'll quote your exact words - the words I replied to when I wrote the sentence above. You said...

"It's all about the basic issue
of laziness and the Welfare State
mentality vs. those who saw the
value of the Morse/CW mode and
found that once they gave it a
try, they actually liked it and
were able to succeed at it. My
postings, over a decade's worth
both here and on Fidonet, have
been a reaction to the abject
hatred of the CW mode..."

Note that you used the word "mode" twice, not "testing." So, in spite of what you say above, your comments have NOT "always been specifically directed toward code testing."

It's not really that absurd, Larry. The fact that you're relatively up to date in one area does not mean that you're not a old fashioned in another. And, when it comes to radio (which is what we're talking about here), you appear to be an old fashioned guy - perhaps even a luddite in some ways.

I always love it when someone "demands" a certain type of conduct, yet they themselves have a real maturity problem.

Case in point, Herr Brokeslob, K (BIG zero) HB, of Nowhere Minnesota. He takes issue with someone else's conduct, yet takes advantage of e mail to promulgate his own childish behaviour.

The purpose of this e mail was to...WHAT, Hans? Show off your indeterminable wit? Make a poignant political statement? Satisfy your own desire to wade in the pool for a while?

Why am I not surprised...??? Two of the biggest braggards and hooligans herein are the oldest and allegedly well educated retired "professionals".

Oh well...no wonder the current generation has "responsibility" issues, considering the lack of same demonstrated by the previous.

Killfiling the phone bands because of actions you disagree will have exactly the opposite affect you are probably hoping for.

I don't think bad operating practices are so prolific *from anyone* on the HF bands that anyone should refrain from using any of them.

You mean kind of like the only way you grow balls is through comments like the one below?

By the way, I am 47 years old, far from being a part of the 'me' generation. I just don't agree with the notion that it is my responsibility to make bigots and hypocrites happy, just as it is not theirs to make me happy.

Larry cannot understand that Riley Hollingsworth is a man who is quite stern, cannot be "tricked" as Larry loves to imply, and who has a deep commitment to ham radio without the bigotry attached. Larry can't stand it that I respect Riley for his thoughts and the way he makes them--but disregard the notion that a callsign will move ham radio "one step closer to extinction." In fact, I downright will tell Riley (and have) or anyone else that he's wrong. Larry doesn't like that, either.

Larry doesn't like a lot of stuff.

Note that Bill did NOT say Morse testing will be completely
eliminated in 2003. He said Morse code testing will probably
be dropped from the *treaty* at WRC2003. That's a big difference.

Saw this on a history reflector, and thought it was interesting.

(ï¿½ï¿½ï¿½) 73, de Hans, K0HB

THE WAYBACK MACHINE #16 by Bill Continelli, W2XOY

When the FCC created the Technician class license back in 1951, their intention was to give it a separate and unique purpose. The Commission stated that the Technician class license was established expressly for serious minded experimenters who needed spectrum space in which to conduct their tests. It was not established as a communicators' service and was not to be a stepping stone between the Novice and General class licenses. The original Technician class operator only had privileges above 220 Mc. In 1955, they were given six meters and in 1959, the 145-147 Mc. segment of two meters. Getting additional frequencies for Technicians was difficult--the petitions could not mention "communications" as a reason, but rather had to show that there was a need for additional experimentation on the six and two meter bands. Because of the "experimental" nature of the license, Technicians were not allowed to become RACES stations. They also faced some discrimination by a few higher class amateurs--in fact, several proposals were made to the FCC to "punish" Technicians who used the airwaves to communicate, rather than to experiment.

In 1962, two events occurred. First, the FCC denied petitions to give Technicians the 29.5-29.7 Mc. segment of ten meters as well as full two meter privileges. In rejecting these petitions, the FCC said there was "considerable misunderstanding" about the role of the Technician class, and restated the "experimenter" policy they had issued in 1951.

Also that year, a new amateur publication hit the market- "VHF Horizons." Concentrating on six meters and above, this magazine was full of technical articles, construction projects, contest information, and VHF news. But it was the editorial content of "VHF Horizons" that broke new ground. For the first time, an amateur magazine called for a rewrite of FCC policy. They wanted Technicians to be considered full-fledged amateurs and not just experimenters. Naturally, this caused controversy in the amateur community. Technicians who considered themselves communicators flocked to this new publication, while some higher class amateurs condemned it and restated their position that "communicating" Technicians were violating FCC policy. Unfortunately, "VHF Horizons" was not able to turn a profit, and expired after only two years.

In 1967, the FCC instituted "incentive licensing". While the actual frequency loss by Technicians was minimal--just the first 100 kc. CW segment of six meters--the FCC still struck a blow to those wishing to remove the "experimenter" status from this license. The FCC once again turned aside

requests to expand Technician privileges to the full two meter band. In addition, the FCC also removed two meter voice privileges for Novices and took away the right for an amateur to simultaneously hold a Novice and Technician license. According to the Commission, too many Novices were operating two meter voice, were not increasing their code speed, and were upgrading only to Technician instead of General when their Novice license expired. Once again, the 1951 policy was restated.

However, despite the FCC's position, thousands of Technicians were on the VHF bands as communicators. With the rise of two meter FM, new Technicians were taking to the airwaves every day, mostly with surplus wide-band commercial equipment. Recognizing that the role of this class of license had evolved, the ARRL Board of Directors met on November 1, 1969 and came to a decision. In an editorial in the December 1969 issue of "QST" entitled "Technicians as Communicators", the ARRL's new position was stated--Technicians were no longer just experimenters, but rather full fledged communicators. The ARRL proposed that they be given the full two meter band, the 29.5 to 29.7 Mc. segment of ten meters, and the ability to once again hold a Novice license simultaneously. The ARRL put these proposals before the FCC in a petition.

The FCC did not immediately respond to this petition, but rather, in 1971 issued an odd ruling in which they stated that a Technician class amateur could not use a repeater in which the input was in the Technician subband of 145-147 MHz, but the output was above 147. Nevertheless, since the repeater subband in the early 70's was 146-148 MHz and the Technician was not allowed above 147, the FCC was under pressure. On October 17, 1972, Technicians were given the 147-148 MHz segment of two meters. The FCC denied Technicians ten meters, Novices privileges, and the 144-145 MHz portion of two meters, but the door was opened.

With thousands of Technicians on two meter FM, the FCC then moved slowly towards full VHF privileges for them, realizing that the "experimenter" designation was obsolete. In 1975, Technicians were given Novice frequency privileges. When the new repeater subband was opened at 144.5-145.5 MHz, Technician privileges were expanded to 144.5-148. The FCC also realized that Technicians could no longer be excluded from RACES operation. In 1976, the FCC eliminated the "mail order" status of the Technician exam and required applicants to show up at an FCC examination point.

Finally, in 1978, Technicians received full two meter privileges. In the eyes of the FCC, they were full-fledged amateurs. In 1987, the exam was made easier by splitting element 3--the General written exam--into 3A for Technician and 3B for General. This is why those Technicians licensed before March 1987 only have to take the 5 WPM code test to upgrade to General. Also in 1987, Technicians received sideband privileges in the 28.3 to 28.5 MHz segment of ten meters. And, in a final act of "Technician Liberation" in 1991, 40 years after the license was established, the code-free Technician was created.

In article <3be37600.2402954@news.mindspring.com>, billsohl@mindspring.com (Bill Sohl) writes:

>The FCC has been clear enough on what rational
>keeps even 5 wpm in US regs now and that is only the treaty
>requirement.
>
Yup. If it wasn't clear in 1991, they made it perfectly clear in late 1999. The treaty is the ONE AND ONLY reason they kept code testing in the restructuring that went into effect April 15, 2000.

If/when that reason is eliminated, it would be completely illogical for the FCC to continue code testing, unless there is a major FCC policy change. And that's not very likely. Heck, the FCC has been pushing the nocodetest idea since 1975.

Opinion question, Bill: If S25.5 is eliminated, will there even be an NPRM, or will the FCC just issue an order of some sort suspending Element 1? I would not be at all surprised if they just did the latter,, saying that they had already considered the matter thoroughly in 1998-1999.

Fun fact: In the results of Field Day 2001, CW and digital QSOs are UP and 'phone QSOs are down, compared to FD 2000. The FD 2000 writeup gives actual numbers, but the FD 2001 writeup just gives percentages of increase/decrease. Some numbers:

FD2000: CW QSOs 509,562 (35.8%)
Phone QSOs 901,869 (63.4%)
Digital QSOs 10,385 (0.8%)
Total QSOs 1,421,816

FD2001: CW QSOs up 5.1% (about 535,549) (37.8%)
Phone QSOs down 4% (about 865,795) (61.2%)
Digital QSOs up 37.9% (about 14,321) (1.0%)
Total QSOs about 1,415,665

Participation is just about the same both years.

I would agree with you, Jim, except I expect to see the Commission inundated with petitions for everything from refarming the Novice bands to making it a revocable offense to observe that Techs have a renewal rate of about 15%.

Wrong. Technicians licensed before 1991, INCLUDING those licensed before March 1987, ALREADY HAVE PASSED a 5wpm code test. They don't have ANY TEST to take to upgrade to General class under the licensing provisions effective April 15, 2000.

So are you saying that field days and QRP contests are idiotic?
How about fox/beaver hunts? Those all take quite a bit of skill.
Have you ever participated in any of those "idiotic" contests?

An NPRM or NOI is not required to relax a restriction short of a
major restructuring.

Lest we forget, the entire question of Morse Code and its testing
for amateur licensing is totally non-existent and off the radar of
top-level FCC management who deal with issues of national broadcast
and telecommunications policy. The highest level of FCC staffer
with any "ownership" of this area would be Bill Cross, one of the
non-supervisory people who handles amateur rulemaking.

Something like this would be handled by Memorandum Opinion and Order
(MO&O) which is done by circulation (passed around amongst the
Commissioners' offices for signature and announced by title only at
an open meeting with no public hearing, no public vote).

Dwight:

I've seen Kim's photo, and trust me, I definitely do *not* obsess over her so-called anatomy!

Kim's call sign is obviously intended to call attention to a particular part of her anatomy, for whatever purpose she has. Unfortunately, this off-hand reference is considered by members of polite society to be offensive and demeaning to women, and not worthy conduct for radio amateurs. We value the fact that our hobby/service is family-oriented and we are constantly making the observation that we need more young people to become involved. However, when their parents see such poor examples of hams like Kim, with her callsign full of demeaning sexual innuendo, they are justifiably concerned about the example this gives to young people. Thus, she has, as Riley so aptly stated, taken us "...one step closer to extinction." Unfortunatley, Kim doesn't see the damage she has done, because it doesn't serve her purpose to do so.

The longer-view giggle here Dick is the assumption that what currently
appears to be a steamroller-effect wrt to eliminating the code tests
is somehow carved in stone for the millenia at the policy making and
regulatory level. So were the concepts behind Lyndon Johnson's Great
Society which were implemented and have since been clearly proven to
be one of the all-time high policy-making disasters in this country's
history. From which we've been struggling to recover from for how long
now?
>
>
The thrust to eliminate the code tests is simply a "phase-delayed"
microscopic-version attempt to dump Great Society free lunch mindset
into HF ham radio. There is no visible reason to expect that the
results would be any different from Lyndon's resounding thud.
>
>
If there was ever a point in this country's history when regulatory
agencies are in a mood to avoid more disasters via lack of forsight
this is it. Would not surprise me one bit if the FCC did a 180 on the
code test thingey.

Hans, I don't remember exactly when these things transpired, but when I obtained my novice ticket in 1962 the only classes were novice, technician, and general. I obtained my extra class ticket in 1966 - so I have to assume that incentive licensing was underway at that time. The loss of some frequencies for advanced and generals may have well been after 1970, but the incentive licensing was underway before that. A good friend of mine was licensed as a technician back in the late 50s or early 60s. He only has to file paperwork to be a general. He has passed all of the tests. They downgraded the technician technical portion (well, written portion) of the test back in the 80s. Folks who can prove a technician license before that will become generals without taking ANY more tests.

Understood. Since the FCC's position on why code testing is still needed was
defined in 1999, the rest is pretty obvious.

Years ago, there were regs that required stuff like having to get a callsign
that matched your address if you moved, detailed logkeeping and
send-a-postcard-if-you're-operating-away-from-home-more-than-48-hours. As I
recall they all disappeared with little fanfare.

>and general.

Actually, James, that's not true. The Extra existed back then, too, requiring the 20 wpm code tests and a written test. Few hams got one back then because it gave no additional operating privileges.

Advanced also existed but it was closed to new licenses from the beginning of 1953 until 1967. Folks who already had Advanced licenses could keep renewing them and modifying them.

> I obtained my extra class ticket in 1966 - so I have to assume
>that incentive licensing was underway at that time. The loss of some
>frequencies for advanced and generals may have well been after 1970, but the
>incentive licensing was underway before that.

The discussion started as early as 1958, and the first serious proposals came in 1963. The Advanced was reopened to new licensees in 1967, and the HF license class subbands came into effect in two stages on November 22, 1968 and 1969.

March 21, 1987 is the effective date. Old Element 3 was split into 3A and 3B.

> Folks who can prove a technician license before that
>will become generals without taking ANY more tests.

Yup - a paperwork upgrade.

For a detailed description of how this all came to be, surf over to deja.com and search on "The Past 50 Years of Amateur Radio Licensing" and my call.

I believe the Extra was available from sometime back in the late 40s
when the FCC reorganized the ham license structure and eliminated the
old Class A and Class B licenses and created the General, etc. I don't
have a clue about when the Advanced Class license was created. Not
many hams pursued the Extra because it did not convey any more
priveleges than Generals had, it just got you a spiffy piece of
wallpaper. Generals had the whole ball of wax like Extras have today.
The FCC issued an 8 x 10 "Extra certificate" in addition to the actual
license from dunno when (40s?) thru the inception of Incentive
Licensing and to some point beyond when they quit passing them out.
The examiner filled it out on the spot and handed it to ya when ya
passed the Extra test but ya still had to wait the usual 6-8 weeks for
the license. The Incentive Licensing maneuver in 1968 +/- put teeth
into the Extra and Advanced licenses and spanked Generals. That's when
most of us Olde Farts with Extras now went back to the FCC Field
Offices to grunt thru the Extra exam in order to get dxing freqs back.
Long after we thought we had it made for life with our Generals.

Oh yeah, hey Dwight. The hilarious thing is that the photo I used to have on QRZ was of me while I was driving and was from the shoulders up...LOL Larry's only fantasized about what he believes.

In addition, I am 5'5", and weigh 210 pounds. Now, that may be obese to you, or whomever. But it certainly isn't to me.

The only problem here is that Larry is so full of self-hate for the way he is, looks and his failure with women, that he thinks it's normal for everyone to feel the same way when he slings mud around. Larry is so used to attacking people that his social skills are so minimal he must live by himself and carry on a lonely, lonely job.

Yeah, that's mud-slinging too. Larry brings out the worst in me...LOL

By the way, Larry: Would you like to see what Riley Hollingsworth would have to say about your remarks that you've made here in the newsgroup in terms of whether they reflect good moral character, spirit of friendship, etc.? I'd be more than happy to be the one to piss him off with a whole bunch of your postings and ask that he share any opinion he may have. I could even suggest that he just peruse some of your posts. I can guarantee of what his response would be if he read your "stuff."

Put up or shut up, Larry. Just let me know.

The Great Society was filled with affirmative action programs.
Morse code testing is an affirmative action program. Seems to
me, eliminating Morse code testing is a step away from forced
social engineering toward freedom of choice of modes in a hobby
in a free society. You, OTOH, seem to want to continue a "Great
Society" of forced Morse code operation. Why can't Morse code
stand on it own merits? Why does Morse code need an affirmative
action program?

And I'll leave that purpose up to her - it's none of my business.

> Unfortunately, this off-hand reference
> is considered by members of polite
> society to be offensive and demeaning
> to women, and not worthy conduct for
> radio amateurs.

First of all, this is hardly a "polite" society. Second, breasts are not offensive and demeaning to women - it is only so when a person chooses to make it so in their own mind.

> We value the fact that our hobby/service
> is family-oriented (snip)

The last I checked, it was a good thing to have breasts around when starting a family - which seems pretty family oriented to me.

> demeaning sexual innuendo

Only in your own mind, Larry. I don't tend to view a simple reference to breasts that way.

> (snip) Thus, she has, as Riley so aptly
> stated, taken us "...one step closer to
> extinction." (snip)

And I think that is going a little overboard. A single person's callsign is not going to have any effect on ham radio - much less bring it closer to extinction. If Riley truly feels that way, why was the callsign available and issued?

Basically to appease the Saudis, who have a very tenuous hold on their own government due to all the radical Islamics and their sympathizers who are among their own population. They could bring down the Saudi monarchy at will, if they wanted to badly enough to make the necessary sacrafices, and that fact is well known. It would not seem that sitation has abated at all to this time, rather is instead worsened. They dread what's going on now, as they know it will serve to stir up the fundamentalist Islamics.

So show the posting where I said anything remotely like that- you can't because it didn't happen.

We know that it's much too late for you, Kim or Dwight to acquire any common sense, but could
you at least take it as a given that in wartime the nation must be put on some kind of a wartime
footing if we are to have any chance of winning? That clearly means closing some of our openness
that was very much a part of adding to the terrorists advantage on Sept 11. If you can't understand
that, you reveal a lot about yourself(ves).

Does being at the original Woodstock create a criminal or something, Dick?
I don't understand your implication.

Once again, you're great at innuendo, but nothing remotely constructive
about dialogue or debate.

No, I was not at the original Woodstock, I was too young to make the
decision by myself to go.

Of course it did, Dick. A few of us said we didn't want to give up any
constitutional rights in order to catch terrorists and you argued that
was not the way to be - that we *should* be willing to give up
constitutional rights in order to catch terrorists. You continue
to advocate such in your closing paragraph below in this posting.

> We know that it's much too late for you, Kim or Dwight to acquire any common
> sense, but could
> you at least take it as a given that in wartime the nation must be put on some
> kind of a wartime
> footing if we are to have any chance of winning?

That is why I advocate that we declare war. When war is declared and rights
are taken away because of the war, we get those rights back when the war
is over. We never get rights back after an undeclared war.

> That clearly means closing some of our openness
> that was very much a part of adding to the terrorists advantage on Sept 11.

There you go again, talking with a forked tongue. Please make up your
mind. You are either for or against giving up constitutional rights.
A few paragraphs above you deny what you are advocating in your last
paragraph. You simply cannot both deny advocating something while
continuing to advocate it. Nobody is stupid enough to allow you to
get away with that.

One of the stated purposes of a 60-meter band is to close the gap in
emergency communications between 75m and 40m. SSB is by far the most
popular mode for HF emergency communications. Most of the announced HF
emergency frequencies during hurricanes are in the voice portions of
the bands.

Yup. By a stroke of the pen. Ditto for the detailed technical
filings for amateur repeater stations parallel to those for
commercial two-way radio repeaters.

Blame yours truly for pushing the elimination of the above-mentioned
requirements, aidied and abetted by my compadre at the Washington
office who commuted 75 miles each day with the 2-meter rig mike in
hand.

I suppose Kim is a birdwatcher. There's a kind of small bird called a
"tit". If you think of something else, that's not her fault.

And there's "tit for tat". Somewhat related to flame wars on
newsgroups.

:-)

Affirmative action is artificially inflating the population of a
group with members of certain minority groups. The majority of hams
use Morse code "rarely or never". That puts Morse code users in a
minority group among ham radio operators. You want to artificially
inflate the Morse coded ham population through governmental
requirements. That's exactly what affirmative action is.

Not enough blacks on the police force. Not enough Morse code
operators on the ham bands. It's the same concept.

>>
>I believe the Extra was available from sometime back in the late 40s
>when the FCC reorganized the ham license structure and eliminated the
>old Class A and Class B licenses and created the General, etc.

There was a license called "Amateur Extra" back in the early 1920s but it was short lived.

The Extra as we know it was created by the FCC in the restructuring of 1951. That shakeup brought us the Novice and Technician, too.

>I don't
>have a clue about when the Advanced Class license was created.

The original FRC/FCC setup from the early 1930s was "ABC" - Class A was all privs, Class B was all privs except no phone between 3 and 26 Mhz, and Class C was a Class B taken by mail. In the 1951 changes A became Advanced, B became General and C became Conditional.

Advanced required a year as Class B or C and a heavy-duty written test. All code tests were 10 wpm until 1936 and 13 wpm until 1951.

The Extra was supposed to replace the Advanced, but it didn't work out that way.

>Not
>many hams pursued the Extra because it did not convey any more
>priveleges than Generals had, it just got you a spiffy piece of
>wallpaper. Generals had the whole ball of wax like Extras have today.

That started in Feb, 1953.

>The FCC issued an 8 x 10 "Extra certificate" in addition to the actual
>license from dunno when (40s?) thru the inception of Incentive
>Licensing and to some point beyond when they quit passing them out.

Well, these other ham have such callsigns:

TRINI, TONINO I4TIT
YAMAGUCHI, KENICHI JA6TIT
LINDBERG, JAMES W. K6TIT
FRANZ KRAMER OE7TIT
Desmarais, Richard VA2TIT
Dupras Fontaine, Remy VE2TIT
Cubberley, Neil VE3TIT
McBain, Shanta VE7TIT
BOWLING, LARRY M. W4TIT
HENDRIX, MICHAEL D. W6TIT
TAYLOR, A F ZL2TIT
Kenichi Yamaguchi, JA6TIT
Miss. Andrie Evans, VU2TIT
Jacek Malec, SP5TIT

Must all be birdwatchers.... :-)

And then there is:

FUCITO, MICHELE I8FUC
ROSATI, GIANFRANCO IK6FUC
GROOSCORS C, ROLANDO E YV5FUC
MARQUEZ F, MARCIAL E YV2FUC
PEREZ, GUILLERMO YV1FUC
Hector F. Verolin, LU2FUC
Hector G. Ortiz, LU3FUC
Hector J. Franceschina, LU4FUC
Leandro O. Aguiar, LU5FUC
Angel J. Andreuchi, LU6FUC
David O. Attaccalite, LU7FUC
Hector F. Bartolome, LU8FUC
Juan A. Mainardi, LU9FUC
LUIS SOLER GRAU, EA3FUC
JOSE L. PAREDES LOPEZ, EA5FUC

ANTONIO CERVANTES MAZA, EA7FUC

Additional note on this topic Hans: The Brits are also well into
creating a 60m band of their own according to some newsletter or
another which floated thru here recently. This brings up the prospect
of 60m being "dxable" like the existing WARC bands. No ITU involvement
in any of it yet that I've heard. That's a twist.

Does that "closing some of our openness" include torture in your book, Dick? Did you see the Larry King show (I believe - does anyone else know what show this was actually on) the other day where a well known "hollywood" lawyer and another guest sat there talking about the need to legalize, and establish orderly laws for, torture in this country - both agreeing that torture will be a routine thing in this country in the coming years? Did you see the poll results during that show where a large number supported the idea of torture? Did you also notice that none on that show talked about limiting torture to just terrorist?

Wake up and smell the roses, my friend. Everything that makes this country what it is (a country where citizens have rights and are treated with dignity) is under attack by someone (and I'm not talking about "those" people over there). If you don't begin to take a stand now in defense of your rights, don't cry later when an out of control government or military walks all over you.

Much of the administrative relief could have been appreciated without
shirking it's responsiblities.

The FCC of your era, Phil, is an agency that "solved" problems by throwing
it's collective hands in the air and "deregulating" the services so that it
would no longer need to hold them to the rules.

We see the result on 11 meters, and we see the present-day need to have
"enforcers" (ie: Riley Hollingsworth) on the Amateur bands in order to clean up
the nearly three decades long period of neglect and irresponsiblity of the FCC.

I wouldn't be owning up to any "responsibility" for that period, Phil. It
wasn't a period of FCC history I'd want MY name attached to.....

I suppose this explains why Dave Popkin, FCC engineer for the NYC
area and a higher level ham licensee, discouraged me from going for
the Tech license. "Real hams start with the Novice" and operate HF.
I wanted to use phone.

My father and I went to his house so I could take
the tech tests, CW and written. I studied code in the slow 5wpm
character method, Dave through at me a code test with Farnsworth
13 or 20wpm at 5 wpm spacing. So I failed badly.

When I did get my Tech, I had to go to the FCC field office in NYC in 76
(which I understand is now condos). Took the code test at 5wpm
at 5wpm speed, not farnsworth. Random 5 word words. Had to
send with their straight key. Pass with ease. Then the written
which I passed with 1 plus the minimum correct number of answers
required. I thought I'd choke on code and ace the written when I went in,
being an EE major at the time. Wonder if someone at that office
picked out "ISE" for me as they might have thought I'd be a code
fan. I doubt it, though, the office that assigns calls is elsewhere.

> MHz segment of ten meters.

That was my first taste of HF DXing. Then when restructuring happened,
I did the Advanced and Extra CSCEs and with my old Tech, got my
"Extra Lite" :-).

OHMYGAWD, Larry!! Let me assure you I need *NO* callsign to call attention
to my, er, ahems.

Would you like me to repeat the whole story of how and why I have the
callsign that I do? Oh, heck. Let's just go for it. You're the one who
brought the topic up again.

Story:

When I first became a ham in 1993 (actually my hubby and a whole class of us
got our tickets), the Vanity callsign program had come and gone. I knew
several hams who had vanity callsigns, but none of us really had any
thoughts of such because it just wasn't an option available to us. Lo and
behold, a few years later, we heard the FCC was going to begin the program
again and would be doing it phases.

Quite frequently we would all discuss on the air, we new hams, old hams,
hams who'd never gotten a vanity call and hams who had. As is usual, most
hams down here (at least that are on the air) are guys. You know: males. I
am pretty much the only girl--or was--on the repeater at this time. Well,
the guys would get involved in long, protracted conversations about what
they were "going to get" when the vanity program became available to them.
Of course, it was always a boring name-initials thing. I really never had
even planned on getting a vanity call, though I'd never liked my originally
issued KC5HQJ.

One day, I happened to pipe up and tell "the guys" what whusses they were
for just getting their initials and not being creative at all with the
program. There was so much they could play with. Even my darlin' was going
to get W5CAW--his initials. Over the next few weeks they'd tease and make
comments on what I'd get if I got a vanity callsign--just daring me to tell
them what I'd get (this was given the fact that everyone knows me, we're all
friends, and I am DDD). They'd giggle, etc. Until the day I finally keyed
up and told them that *if* I were to ever get a vanity callsign, that I
thought I would probably get something like K5TIT. Well, the frequency went
absolutely dead for just a few moments. (My husband, of course, had heard

this part of the story so he was cracking up right along with me).

Anyway, they all proceeded to snarf and growl that I'd never dare do such a thing, etc., etc. I don't know what made me check but a couple/few weeks later my husband and I were online--he's got one side of the home office and I've got the other. He mumbled that W5TIT was available. I hadn't *even* guessed that a callsign like that would even be LEGAL, let alone available. So, I told him I ought to get it and just sign on one day with it.

Even a few weeks later, I applied for, sent the money and waited to get W5TIT (K5TIT was already taken by a man over in FL). Not just a few days later I got the call W5TIT, and signed on with it the next morning.

One night, a wonderful old coot, Howard, from Rockwall was talking simplex. This man is probably in his 70s-80s, is staunch and easily disagreeable, and is a churchgoing man with a lovely, dainty wife. At the time I came across the simplex conversation, I was not aware that Howard was on frequency, because I'd only heard Don and Rusty. I signed on, "W-5-T-I-T." Dead silence. I signed again, "W-5-T-I-T." Rusty came back this time, holding back hysterical laughter, and said, "Is that you, Kim?" Before I could answer, Howard keyed up and sounded none too happy. He said, "Please state that callsign again, phonetically. First tell me if that is you, Kim." I said yes it was me and gave my callsign, heart pounding, dreading what I was about to go through with Howard. I was envisioning that Bea had just heard me sign on and that Howard had sent her off to another room so that she'd not hear that again. I keyed up, "Whiskey-Five-Tango-India-Tango, W5TIT." After just a brief pause, Howard came back on, and I could hear the huge grin in his voice. He said, "I like it, I like it just fine" and started laughing.

I knew if Howard liked it, I liked it just fine too. The majority of responses to it have been quite positive--it works wonderfully in a pileup on HF (even though I don't frequent HF often), and it sure does lighten a serious moment on the radio. Not one woman ham, and I repeat not one, has ever expressed a problem with it. In fact, most giggle and play with what they might get as a vanity callsign if they ever did--and even I am embarrassed at what some of them have come up with.

I truly don't care that some don't like it. I doesn't matter a whit to me, because it's fun; is not meant to be malicious; and it's old hat around here now. It doesn't even have the original "shock" value that it had. Just as some are disgusted by people who do nothing but talk about traffic on the air (me, I *hate* it when people talk about traffic on the air); some don't think politics and religion should be topics on the air; and some think new hams should stay off for a year; there are others who get picky about callsigns.

That's the story, that's all there is to it. I have now taken every EmComm Course the ARRL offers, have mentored a couple of Level I and one Level II class, have just resigned as Hunt County ARES EC here in Texas (much too busy at work), have talked all 'round the world with this callsign, and Larry and a couple of other idiots here in the newsgroup are the *only*

people who've ever had a problem with it.

You all ought to hear it bust through a pileup--in any language! ;)

Kim W5TIT

I don't really know. It may well be that an NPRM would
be required...although if so, I doubt it would be anything more
than the minimal intervals for input rather than the lengthy
process that lead to restructuring.

Cheers,
Bill K2UNK

Brian had you clocked, Cecil. You have the situation completely
backwoods backwards. So much for your homespun philosophy of things.
Affirmative action was a "gimme" like the reduction in licensing
requirements is a "gimme".

But just because the IARU wants it gone doesn't mean that the ITU will find room for the subject on its agenda. Last I heard there wasn't room on the agenda for it to be even brought up for discussion in 2003. I think Bert's right, 2013 is more likely..

Affirmative action is not necessarily a "gimme'. My home town
is an example. Although having a large black population, there
had never been a black law enforcement officer in the history
or the town. After affirmative action, there have been some
exceptional black law enforcement officers who, if anything,
were over-qualified compared to their white competition.
Because of their skin color, they had to be twice as good.

Affirmative action is an attempt at social engineering. The
Morse code requirement is one such attempt. What is wrong
with freedom of choice of modes in a hobby in a free society?

Bert has admitted that he made a mistake and didn't say what he intended
to say, yet you defend his mistake. How can you bring yourself to defend
a mistake?

I dunno. How many American lives has NOT getting him cost?

Why was it worth American and allied lives to free Kuwait, but not any
to get the person responsible for Kuwait being invaded?

The question is: war on whom?

> If 19 guys can turn
> 4 commercial airlines into guided missiles, then 19 more guys, each
> with a suitcase nuke, can destroy America.

Maybe. I don't know how powerful "suitcase nukes" are.

But I think that if the bad guys had SNs, they'd have used them on
Sept. 11.

> It is no longer enough for
> America to"warn" of dire consequences --- we must search them out
> and make horrific examples of them.

At the same time, we must not make martyrs of them. And we must
address the root causes of terrorism, and the holes in our security
that make it possible.

On Sept 10, one of the hot issues being debated was an antimissile
defense system. A system aimed at stopping an attack that will not
come. What we need today are systems aimed at stopping the attacks
that are likely to come.

In other words, fight this war, not the last one.

Easier said than done, Jim. Remember Nam where the Air Force shows up with century series fighters and Thunder Thuds. We were flying ground support with T-28s and buying back Douglas Skyraiders (Spads) A1D's and Invaders (at various times A or B-26) from every bananna republic we had sold them to while the USAF bought McDonnell Phantoms (F4B) and the A7D renumbered to B-66. They prepared for the wrong new war.

And having the neat hardware only does any good when the grand honcho knows what to do with it. When the radar-equipped Washington and South Dakota joined the fleet in the Solomons, the admiral put the Wash back with the rest of the battlewagons where the radar op got a great view of the screening vessels being decimated in a nite battle. When it got up front, it did a great job of adding a lot of Japanese steel to Iron Bottom Sound.

We have always had a terrible time dealing with irregular warfare. The Civil War had both sides inviting Thayer down from West Point to rule on whether captured guerillas were POWs, Red Cloud beat the US Army hands down as did Cochise. This Afghan exercise could easily be like chasing Pancho Villa.

In the land of dopey dreams, happy peaceful Phillipines, where the bolo man is hiking nite and day. Where Tagalos steal and lie and Americanos die, you can hear the soldiers sing this evening lay. Damn, damn, damn the Filipinos, cross-eyed kakiak ladrones, underneath our starry flag, civilize them with a Krag, and return us to our own beloved homes.

The tune is God Save Ireland or Jesus loves the little children as your tastes lie.

I don't see the Taliban standing up to B-52s although it would be cheaper to simply buy their allegience in the traditional manner. If they could hold out about another six months, a major fiasco would be brewing. May very well get one anyway.

>Maybe. I don't know how powerful "suitcase nukes" are.

I dunno, Jim. They "only" destroyed two buildings in NYC, yet look at the economic havo that has befallen since.

Now....Had a "suitcase" nuke been detonated from the ROOF of one of those buildings, imagine the complete loss of the complete financial district of NYC, NOT just the two buildings (sa important as they were).

Let's be a bit conservative and say they have only half that number, or nine weapons...NYC, ATL, DFW, CLE, LAX, SFO, SEA, BOS, and SDG. That's most of the major metropolitan areas of the United States.

I'd say we'd be in the ox-cart mode for a while if we ever suffered even limitied strikes on the business districs of those areas, wouldn't you?

Because the State Department essentially gave Saddam Hussein permission
to invade when they earlier said the US would not defend Kuwait?

How much do you think each of those nukes is worth? Maybe the bad
guys don't want to risk losing any during a US smuggling operation.
Maybe they are saving them for Israel.

I guess that depends on wether you put a dollar value or a political value
on them.

>Maybe the bad
>guys don't want to risk losing any during a US smuggling operation.

Smuggling operation? These are terrorists, not drug kingpins. At least
drug lords have some motive in mind...money. Terrorists, despite the fascade
of the political agendas they use to hide behind, only do what they do for the
opportunity to be destructive and evil.

>Maybe they are saving them for Israel.

Maybe...maybe not...that's what has us on the edge of our seats now, isn't
it...?!??

Trouble is, to most law enforcers, you might look like a citizen. To one,
you might look like a terrorist. Unless all citizens possess constitutional
rights then no citizen possesses them.

Hey all, while I am in NYC with the Red Cross, I am going to take my license exam, 2 weeks from today I will be taking the test. Then I can go look for a place locally that sells radios. Since I will most likely be here until first part of December if not longer, I might as well put my license to use while I am up here eh?

Check out HRO in Delaware. It's probably near enough to drive there, and the prices are good. If you're looking for a good 2M rig, the Alinco DR-135 has treated me well, even if the modulation is a bit "hot" on it. (Anyone have the adjustment info on this radio so I can turn mine DOWN just a hair?) The DR-605 is a good dualbander, as well. I have several friends in the area who have them, and they're thrilled with the performance. If I could have afforded a dualbander (this set runs about $350) I would have gotten the 605.

Good luck on the test, and hopefully we'll be hearing you on the air soon!

Hi Keith,

You might want to try Barry's Electronics. It's on Broadway close to Spring St. A word of caution: Barry's is notoriously overpriced, HOWEVER, they desperately tried to get me to walk out of there with a sub $1,000.00 IC-706Mk. IIG...and that ain't bad for NYC! I think they're trying to compete with the internet deals. Good luck and take it easy.

Geez Louise,

I can't win for losing! (Do they still say that?)

Bert's beliefs:

1. The ITU will NOT may or may not eliminate Morse "proficiency" as a
requirement for HF privies. I've got twenty bucks (...actually $10 ;-)) riding
on the "NOT until 2013" chip.

2. The FCC will still require Morse testing for HF privies, regardless of the
ITU's decision.

These beliefs supercede any and all previous "thoughts" due to dynamic cerebral
activity. I hope we're all cool with this. :-)

"Dagnamit!" I just felt like using that, Jerry.

Depending on how much he has to spend he could go right for a Yaesu FT-100D or the Icom IC-706MKIIG. Both rigs will let him do 3 bands, 6m - 2m - 70cm, all mode. Then when he upgrades he will have a mobile rig that will handle HF too. I think it's better to buy a bit more radio that you think you'll need so you don't out grow it so soon. Also many of the late model vehicles don't have room for two rigs, HF and V/UHF, much less even one. So the above two rig models helps save space.

Didja know that the health gurus say the single most effective thing a person can do to prevent cancer is to drink a glass of tomato juice each day? It's loaded with

Lycopine (sp?) a highly effective anticancer compound. The more refined the tomato product the more potent the concentration. Fresh tomatos have the least concentrations.

That's great as a statement of principle, but if we don't overcome this *large*
bunch of terrorists determined to'
take us down, they will be able to get the job done. People who have no sense of
the scope of the threat and who insist on demanding every consideration due any
citizen first and formost, will only help play into their hands eariliest.

check this out...
Gingrich Predicted Terror's Rise

The Atlanta Journal-Constitution
By Tom Baxter
Atlanta Journal-Constitution Columnist

Newt Gingrich has been enjoying a
renewed reputation lately as a
prophet.

The Hart-Rudman Commission on
National Security in the 21st
Century -- a bipartisan effort that Gingrich, when he was speaker
of the House, started with former President Clinton -- came out
with a report earlier this year that all-too-accurately set the stage
for Sept. 11 and its aftermath.

The combination of the proliferation of unconventional weapons
and the persistence of international terrorism "will end the relative
invulnerability of the U.S. homeland to catastrophic attack," the
report predicted.

It said creation of a homeland security agency should be the
nation's first priority.

"It's very sobering to look at what we went through and realize
how small it is," Gingrich said Wednesday at a luncheon sponsored

by the Georgia Public Policy Foundation. "This was like the precursor to a heart attack."

While not critical of President Bush's handling of the war effort, Gingrich, who also sat on the commission, said a "large element" of the administration, as well as the media, still haven't caught up with the enormity of the challenge.

"I don't want cheerleading from the administration," Gingrich said. "I don't want promises." What is needed, he said, is an ability like that of Churchill to steel the nation to a deadly struggle.

The country faces three parallel dangers, the former speaker said, as challenging as those of World War II or the Cold War.

The most pressing is the growing access by dictatorships such as Iraq and North Korea to weapons of mass destruction.

Without an aggressive effort to control that threat -- including, if necessary, bringing down Saddam Hussein's regime in Iraq -- Gingrich said, "Our wake-up call could be 100,000 Americans dying."

International terrorism, in all its forms, constitutes a second threat. The third threat he called "medieval Islam."

At least 11,000 schools around the world teach young Muslim men a set of habits and values that render them both incapable of entering the new world economy and deeply resentful of the United States and the Western world.

"The lesson of Sept. 11 is, we can't live on the planet with a large school system teaching people to hate us," Gingrich said.

He advocated an all-out effort to win over the Islamic masses, including infusions of aid to refugee camps and a propaganda effort of Cold War proportions.

Hair-splitters in the history department might fault the former West Georgia professor's choice of "medieval." That, after all, was an era when the Muslim world was in many ways more socially tolerant and technologically advanced than Europe.

The word makes Gingrich's point, nevertheless, and it replaces "fundamentalist Islam," a connection that has caused some discomfort in conservative circles.

Whatever your view of Newt Gingrich there's no doubt he hit this nail dead center.

Dwight:

The legality and legitimacy of Kim's callsign is not the issue, and
never has been. The FCC's focus is not on the image of the ARS --
that is the job of our local and national amateur radio organizations,
and of individual hams themselves. However, Kim has been told
by a fellow ham, and an FCC official, that her callsign, while not
illegal, does have a negative impact on ham radio's image. Please
try to keep your comments focused on that.

Kim:

I receive regular, positive feedback on my posts from people who
read this newsgroup. I'm sure Mr. Hollingsworth has plenty of
opportunity to read my postings, and comment on them directly
to me through E-mail or this newsgroup. So far, he has not seen
fit to do so, one way or another. If you choose to go out of your
way to forward my postings to him, just be sure to include *all*
of them, quoted in full, with all supporting quotes from other
participants fully attributed. I assure you that if he would accuse
me of taking ham radio "...one step closer to extinction," that I
would certainly take his comments under advisement, even
though you have not. Therefore, feel free to proceed.

US citizenship is easily proved and Mohammed Atta and his crew were not
citizens.

What rights do you think terrorists are entitled to that they haven't been
afforded?

I'd be surprised if you're right, Bert, but one never knows until the lady
sings.

>2. The FCC will still require Morse testing for HF privies, regardless of the
>ITU's decision.

This I gotta disagree with - unless there is some sorta massive shakeup at the
FCC between now and if/whenever S25.5 goes away. FCC has made it officially
clear at least twice that the ONLY reason they keep the code test is the ITU
treaty. They said in no uncertain terms that the code test "serves no
regulatory purpose" other than meeting that requirement.

But ya never know. Stranger things have happened.

ARE you kidding??? We offload thousands of modular containers from ships daily at docks on all three coasts, and only about 1 in 10,000 even get opened for even the most cursury inspection by the badly outnumbered Customs inspectors. Virtually all are set on railraod flatcar trains and immediatley "Hot shot"ed to their destinations, mostly distribution centers in metro areas of the various regions of the country. WE never know exatly what is aboard. So did you really think that none of them ever contained contraband???

And, if that's too much trouble, to arrange a load on a container bound for the USA, there's always the 3500 mile Cnadian border to step across, wsithout so much as a single strand fence, and road crossings with inspection points few and VERY far between.

Scared yet???

From what I read they're roughly equal to the one that took out Hiroshima. Plenty big enough.

I recall thinking, after the first WTC attack in '93, that since it didn't work it seemed likely that they would use a suitcase nuke next time I (and I never really doubted their would be a next time-Why not, there was to be a first?). But they did one better than that-they used cheap, easily available Cruise missiles that we supplied and even fueled up for them. Clever, I must say.

As former holder of license WR0AQH, I thank yew, Phil. And I will always wonder what that genius, whoever he was, was thinking about when he instigated all that.

Uhhhhhh Dick, that exactly matches the definition of "smuggle". From
Webster's: "smuggle - to import or export goods secretly, in violation
of the law". Exactly how are you going to get a foreign nuke into the
US without "importing it secretly, in violation of the law"?

You've STILL got it wrong, Cecil. Affirmative action was indeed a "gimme". It allowed those who could not pass an exam to gain employment. Had it not been for affirmative action, those individuals who could not pass an exam, set as a standard for obtaining a particular job, would not have been employed. Your "twice as good" blather and "over qualified" statements are quite subjective.

Those who would be radio amateurs with HF access are now able to get on the air because the morse testing standards have been lowered in order to admit them.

Your attempt at an explanation coupling Affirmative Action and morse testing fails as miserably as your past morse-testing-equates-to-racism crap.

Actually, you might be surprised about that also, Dick. Back in my younger days, I was about as liberal as one could get. I believed all the crap teachers force feed students. I believed the garbage from the press. I believed in concepts like diversity, tolerance, and so forth. Today, I realized that 95% of it was total BS - liberalism sucks and concepts like diversity and tolerance have to go both ways (which they don't in this country).

Of course legality is an issue. The FCC official you mention has direct authority over the legality of that callsign. If Riley truly believes it has a negative impact (in any way) on ham radio, then he has the authority to eliminate the callsign. Since he has not done so, he obviously does not feel that strongly about this issue. In other words, the fact that he has not moved to affect the legality of the callsign clearly shows his overall lack of concern. And, contrary to your attempts to use him as an ally in this, his lack of concern does little, if anything, to support your argument (in spite of what he might have said).

Then you would not mind being tortured then, Jim? What if someone spreads around a rumor that you're a terrorist? Are you totally convinced that you want to live in a world where that is a constant threat - where nothing more than a rumor believed by law enforcement could result in weeks of torture?

Why don't you'all shut up about Kim's call sign. You'all sound like a
bunch of "CB'ERS. If she wants that call, that is her right.

If they can find a way, they will do it, and turn the whole dam bands into
the cb bands. That is what they want to do in the first place.

When they drop the code all together, you won't have nothing but a bunch of low lifes and red necks on the bands just like the "CB" band is and was 20 years ago. The 75 meter band is like that now. I was tuning around on there listening last night, and some fellow ham broke into a conversation on there, and the group was verry rude to him. The 75 meter band is clandish, and if you don't fit into there little click, then you are dead Good buddy.

Hope you pass your test, but be sure not to check in on 3.898 and some of
the frequencies on 75 meters. If you aren't in there little clicks, they
will be verry rude to you and run you off. I am in the process of putting
a stop to that.

The FCC has the authority to decide whether or not to issue a particular
callsign, but not Riley. He does not make policy, he only enforces it.

>Since he has not done so,
>he obviously does not feel that strongly about this issue. In other
>words, the fact that he has not moved to affect the legality of the
>callsign clearly shows his overall lack of concern.

Nope. Just the opposite.

Riley cannot change the FCC's policy directly. His statements in his email were
his personal opinion as a ham.

There's a big difference between the letter of the law and what is good for
society. Just because something is legal doesn't make it right or acceptable.
That's Riley's point, and Larry's.

Why? It shows a net increase of 7,734 operators during that period -
the decrease in the Novice/Techs was offset by the increase in the
other licenses (which means people were upgrading). I'd like to see a
larger overall increase, but any increase is not bad.

Code testing has nothing to do with the quality of people, Dana. It has been many years since they dropped the code test requirement for Technicians, yet there are no more problems on the bands they use than anywhere else. Even you complain about the 75 meter band, where those operators do have a code test requirement.

Most of those hams recieved their licenses when code testing was at 13 and
20 WPM, so how do you figure that the elimination of the code test will
result in more of this type of activity? It certainly doesn't look like
high-speed code testing has stopped what's on 75.

I would think that the crap on 75 and 20 meters has more of a negative
impact than a scatological callsign.

> "gimme".

Sometimes yes, sometimes no. Many Southern blacks were prohibited from entering universities or gaining governmental jobs simply because of skin color no matter how qualified they were. The purpose of affirmative action was to level the playing field. The quota system was the predictable outcome of racism. If it weren't for racism, affirmative action programs would not have been necessary.

> Those who would be radio amateurs with HF access are now able to get on
> the air because the morse testing standards have been lowered in order
> to admit them.

Reducing or eliminating requirements based on outmoded skills is NOT lowering the standards. It is modernizing the standards. Are soldiers required to master the bow and arrow before being allowed to fire an M16?

> Your attempt at an explanation coupling Affirmative Action and morse
> testing fails as miserably as your past morse-testing-equates-to-racism
> crap.

I'm sure you believe that in your personal reality. From an objective perspective, it is obvious that the Morse Code Creed is the secret handshake of a pseudo-royal society and the starving commoners are still being encouraged to "eat cake". The social engineering of forced Morse code skill has outlived its usefulness.

I'm trying to learn code now to upgrade my license, but if they drop the requirement I'll be glad to accept a no-code General ticket. Now as for the CB'er like operators, it don't matter if you pass a code test or not you can still be stupid anywhere anytime, it doesn't require an HF radio!

(Some of the postings on this NG prove that as a fact)

BTW I consider it a PRIVILEGE to be a licensed amateur operator, there is no way VHF and up or 30MHz and down that I'm going to do anything that would be a rule violation and chance loosing my license, it means way to much to me for that kind of stupidity!!!

I left the CB ranks to get away from that crap, and I'm not ever going back!

What you describe is not the Affirmative Action program. You've described the changes brought about because of the 1964 Civil Rights Law. The Affirmative Action program--a racial quota system--didn't work because it violated the civil rights of others. Be that as it may, we aren't discussing affirmative action or civil rights. We're discussing amateur radio licensing in which all citizens and most non-citizens have already had an equal opportunity at obtaining a license.

We aren't discussing the military. We're discussing amateur radio licensing. The Morse code is still in widespread use. Bows and arrows aren't used by the military. By the way, the military is not known for democracy and choices of anything.

My personal reality pretty much coincides with universal reality. Your past squirrely postings lead me to doubt very much your ability to have an objective view. There is no Morse Code Creed, no pseudo-royal society and there are no starving commoners. Are your words those which would be chosen by someone making an objective decision? Good luck with this latest attempt to equate Morse testing with some social injustice.

Of course it (Pactor II) would be much more popular if it wasn't so
proprietary that one had to buy a particular brand of
box to get it. An expensive box, at that.
But if you intend to go on popularity alone, might as well plan on CW,
too, and disregard Pactor II. Ever hear a hurrcane net
working during the hurricane? "Noisey" won't cover that circumstrance,
and SSB is often overpowered. CW *will* get through when SSB won't.

So YOU decide what is an outmoded skill? Basic skills are never outmoded, and radiotelegraphy is the most basic method of radiocommunication yet devised,still very useful under dire circumstances where no other method of communications may be available. But only if one has trained himself to use it.

> Are soldiers
> required to master the bow and arrow before being allowed to fire an
> M16?

Of course not, but you will find bow and arrow or their functional descendents in use in military today, in the form of perhaps crossbows.Quite silent and very effective at ranges a bit too far for hand to hand combat. And I assure you, the forerunner of the bow and arrow is very much still in use-the handheld knife. Carrying a full sized bow and arrow around is not practical. A knife is. And a small crossbow may very well be.
Why can't you show some common sense?

Depending on how much he has to spend he could go right for a Yaesu FT-100D or the Icom IC-706MKIIG. Both rigs will let him do 3 bands, 6m - 2m - 70cm, all mode. Then when he upgrades he will have a mobile rig that will handle HF too. I think it's better to buy a bit more radio that you think you'll need so you don't out grow it so soon. Also many of the late model vehicles don't have room for two rigs, HF and V/UHF, much less even one. So the above two rig models helps save space.

What looks bad?

Total number of hams is up. Total number of hams with full privileges
or almost full privileges is up. Total number of hams in the defacto
entry class is up. In fact, the only license classes to show decreases
are the ones no longer open to new licenses.

I don't see what looks pretty bad.

Everyone with an independent thought process is the final judge of
what is truth and what isn't. Sounds like you want those who disagree
with you to give up their independent thought processes.
>
> >The subject was about your misquote and false attribution. Stay focused.
>
> I don't think so.

Yes, it was. Read the subject line. You misquoted me and I challenged

The Affirmative Action program was necessitated because racists
violated the 1964 Civil Rights Law. Racists had their chance to
comply and the Affirmative Action program was the predictable
result of their non-compliance. The racists have only themselves
to blame for the swinging of the pendulum.

> My personal reality pretty much coincides with universal reality.

That's what everyone says (even the criminally insane).

Give us an ever-loving break, Dave. The ham radio "royalty" system
is obvious to the most casual observer. The FCC has pulled the rug
out from under you people who obtained your self esteem and position
in ham radio from your Morse code ability and you people just cannot
stand it. I know. I've been observing this situation for over 50 years.
Morse code is only a mode and should never have been adopted as a creed.

uh-oh... I better behave myself! I have one of those
"Extra Lite" licenses.... :-)

Maybe it's the extras who's ham license is the top
achievement on their resumes....

as for my resume: BSEE, 13 patents, another pending.
No I don't get royalties, but I do get bragging rights :-)

I figure the extra ham license is equivalent to a 3 to
6 credit hour college class.

> working during the hurricane?

Of course, being on the edge of the hurricane belt, I monitor quite
often. SSB is the HF workhorse during hurricane emergencies. CW is
secondary.

> CW *will* get through when SSB won't.

Not true. At the low of the sunspot cycle on 10m, SSB won't
get through and neither will CW. There is a relatively small
window (15dB) when CW gets through and SSB won't at the same
power.

Atmospheric conditions have a magnitude more effect than mode.
Part of the SSB dB disadvantage is made up for with amplifiers.
Of course, amplifiers work just as well with CW but most CW
operators don't take advantage of the higher power option.

Too bad "Toll Free" (from that "6 to 7 KW on CB" thread last week) doesn't understand that. I once or twice operated with an incorrect mode in a ham subband, ie, answered a SSB CQ of foriegn DX station outside the USA phone subband without realizing at the moment I was out of subband, oops (using an unfamiliar rig, no excuse though). But I never have done any freebanding and don't really have any desire to. There's really nothing I can do there that

I can't do legally in the 10 or 12 meter ham bands. Besides, the freeband isn't empty space, it is allocated to someone like forest rangers or some such, and I'd get in their way.

Of course they are. Grinding flour is a basic skill that is outmoded.
The list of basic skills that have been outmoded by science and
civilization is virtually endless and Morse code is on that list.

> ... radiotelegraphy is the most basic method of radiocommunication yet

That's true. Where our argument lies is whether an individual should be
free to choose the modes for which he equips himself or whether he
should be forced to do so at the whim of the feds or, worse yet, at
the whim of the aging white male good old boy ham network.

There are, no doubt, many many things you could do and know that would
enhance your chances of survival. Have you done them all? If not, how
would you like the feds to force them down your throat? Do you have
storage food? Storage water? Gas masks? Do you think you should be forced
to have them or do you think it should be left up to the free will of the
individual citizens in a free country?

That's a stupid thing to ask, Dwight.

> What if someone
> spreads around a rumor that you're a terrorist?

Give it a try and see what happens. Start off by giving the FBI all the evidence you have to support your contention. (Hint: the FBI is concentrating on citizens of OTHER countries.)

Don't the terrorists win if they're able to conduct their terrorist
activities without fear of being apprehended?

Dick: Some will choose to be scared, some will choose to be indifferent, some will choose to live life as normally as they can.

IMHO, there is no more threat today from terrorists, than there ever has been. We just happen to have enjoyed approximately 20 years of what many people believe has been peaceful. It has not been 20 years of peace; it has been twenty years of Americans living fat, happy, and stupid.

That paraphrases a lot.

305. A Correlation between CW and Competitiveness

Newsgroup: rec.radio.amateur.policy
Date: 2001-11-07 01:01:47 UTC
From: Kim-W5TIT <nospam@none.net>
Message-ID: <3be88861$1_2@newsa.ev1.net>
Source record: 23204

Hey, Jim, and anyone else, just came across this on the ARRL website. It's the current "ARRL Web Survey" and the question is: "Did you participate in the 2001 CW Sweepstakes contest last weekend?"

Notice that 22.3% of the respondents thusfar are not interested in contesting; and
notice that 26.1% of the respondents thusfar do not operate CW

Yes&#65533;and I worked a Clean Sweep! 1.5 % (8)
Yes 9.9 % (52)
No, I&#65533;m not interested in contesting 22.3 % (117)
No, I don&#65533;t operate CW 26.1 % (137)
No, I didn&#65533;t have the time 19.8 % (104)
No (other) 20.2 % (106)
Total votes: 524

I wonder if there is a correlation (unproveable) along the lines of "attitude." I wonder if competitiveness is a factor in whether one likes and/or uses CW?

Thanks for all the input, but perhaps I should have made myself more
clear, what I am looking for at the moment is either a 2 meter HT or a
dual band HT, since it would be rather difficult to operate a mobile
unit without a car hehehe. I have found 2 places in NYC that deal in
amateur radio equipment, one I found by accident, when looking for
another one that had gone out of business, the place I had been
looking for was the "Radio Depot" on 36th btw 5th and 6th, it was on
the 6th floor, what I found instead was Communication Telecom
International in the same building on the 10th floor, they were
friendly, but do not carry much in stock, when I am ready to buy I
would rather get it the same day I buy it. The other place I found was
Barry Electronics Corp. which Bert told me about the other night when

we spoke on the phone. I will check them out later this week.

I don't need anything fancy, repeater capability and easy programming is what I am looking for.

Anyway hope everyone is having a good evening, I enjoyed having the day off, walked around the city a bit, rode one of the double decker tour buses, and enjoyed a good dinner at the B.B. King club on 42nd.

Wrong. Licenses, call signs, and amateur radio rules are issued by
the Wireless Telecomm Bureau. Riley is in the Enforcement Bureau.
His job is to enforce the rules that WTB issues.

>Since he has not done so, he obviously does not feel that strongly

Horsepucky; The tougest radio exam I ever took was the test for the
Boy Scout Radio Merit badge. Not only did ya have to know the code, ya
also had to actually BUILD a working receiver AND explain in detail
exactly how every component in the radio functioned and why it was in
the circuit. I showed up at the merit badge counselor's lair with a
two tube regen and he kicked my slats in for a half hour trying to
trip me up on the technical details.
>
>
I'm trying to imagine the enormity of the flamefest in RRAP if the FCC
decided to pass out tickets only if ya actually built a radio and it
had to work.

Does that mean that 78.7% are interesting in
contesting, and 73.9% operate CW?

By the way, I got my sweep on CW this weekend,
and expect to get my sweep on phone in two weeks.

Does that mean there is a corelation beween a
winning competitive attitude and _both_ CW & phone?

Or did you just have a brain fart?

Dwight:

The legality and legitimacy of Kim's callsign is not the issue, and
never has been. The FCC's focus is not on the image of the ARS --
that is the job of our local and national amateur radio organizations,
and of individual hams themselves. However, Kim has been told
by a fellow ham, and an FCC official, that her callsign, while not
illegal, does have a negative impact on ham radio's image. Please
try to keep your comments focused on that.

>he wouldn't endlessly bring up controversial subjects and take such a
>contemptuous position on them.

Dwight:

Don't blame me for this. It was Kim who deliberately selected a
callsign which included a blatant vulgar reference to a part of her
anatomy which she believes deserves special recognition. This
has nothing to do with small birds. It has everything to do with
her breasts, and she thinks it is hilarious to call attention to them
through her callsign. Then, in a vain attempt to get Mr. Hollingsworth
to agree that she has every right to select and use such a callsign,
she is told that even though she does, her choice to do so does,
in fact, bring the ARS "...one step closer to extinction," due to the
effect it has on those seeking a family-oriented activity within the
ARS.

That list provided by Bob Casey, showing hams with similar
unfortunate callsigns, proves nothing, because it is quite likely
that those callsigns were sequentially issued. However, if I
were to be issued such a callsign, I would have to ask to have
it changed for the reason that I felt it was inappropriate for use
on-the-air in a family-oriented radio service. The fact that they
haven't doesn't change a single thing with relation to Kim. She
should know better, but still chooses to keep a callsign which
is demeaning to women and damaging to the image of the ARS.

This thread is about Kim, nobody else.

Dwight:

Throughout my tenure on this newsgroup, and Fidonet before it, I have always
made a
clear and logical linkage between code *testing* and ultimate *use* of the
Morse/CW
mode. I believe that the two go hand-in-hand, always have, and always will. I
don't

believe that people will learn and use the Morse/CW mode in anything like the numbers
they did in the Post-Restructuring Era just because, as they claim, they are no longer
having "CW shoved down their throats." I have been nothing but logically consistent
on this issue, and your latest attempt to prove otherwise has failed as miserably as
all the others.

Dwight, it may come as a shock, and a painful surprise for you to hear this, but my self-image does not depend on your opinion of me as a person or as a ham. To some hams, who, I will readily admit, are much more technically skilled than myself, I may, indeed, seem to be a Luddite. However, I have participated in this hobby strictly within it's context *as* a hobby. No, I do not have "professional-level" technical skills; and I probably never will. However, my technical skills will compare most favorably to those of the typical Post-Restructuring ham, and even to the Pre-Restructuring ham, from a standpoint of my ability to adapt to new modes and techniques. I am not limited to seeking self-aggrandizement for my heroic achievements in HT-slinging at the local Walk-A-Thon. I leave that to you, Kim, and the self-apologists who think they are Real Hams just because they can coordinate the action of a PTT switch and their own mouths! Unfortunately, I know plenty of such hams who can't even do that!

Wrong (again!), Dwight.

Riley is just a cop on a beat. He can only enforce the rules that exist.
He has no authority to make up new rules about things that might piss
him off on principle. He can only express his distaste (which he did) --
he cannot eliminate the callsign.

With all kind wishes,

I understand that the code test, while 5WPM, is
done Farnsworth style. That is, high speed characters
spaced at 5WPM. Heard that learning code this way
is an efficient method of getting proficient at higher
speeds quickly. So people who get on CW will
find themselves doing faster speeds.

>Today, I realized that 95% of it was total BS - liberalism sucks and
>concepts like diversity and tolerance have to go both ways (which they
>don't in this country).

Dwight:

That is the problem with "diversity" and "tolerance" as political issues.
In America, cultural diversity is normal. We are all descended from people
who came from somewhere else -- including the so-called "Native Americans."
"Tolerance" for our differences is the thing which defines the true American
culture. It is something which is generally not found in other countries --
including countries in Africa and Asia, where Americans are usually given
unfavorable comparisons for our "cultural" defects.

I agree with you that liberalism sucks -- but the issues of diversity and
tolerance were, like most liberal issues, distorted in order to give power
to people with a hidden Socialist agenda. In reality, it is among true
conservatives like myself where the unique American culture -- one
which accepts "diversity" as normal and "tolerates" it as a natural way
of life, is best understood. The difference is we don't use these as
weapons in a political power struggle.

>KF6VYH

John:

If participation in the ARS were limited to persons over the age of 18, then I would not be nearly as concerned with Kim's callsign as I am at present. However, the overwhelming emphasis, especially in the last decade or so, has been on getting younger people involved in amateur radio, and of the nature of the ARS as a family-oriented activity. I believe that Kim's callsign is inappropriate within that context. I assure you that I am no prude, nor would anyone who knows me well ever accuse me of being "politically correct." However, they would agree that I am a rational, fair-minded, and thoughtful person, who doesn't make outrageous statements about myself through devices like callsigns.

I have no problem with people having fun with callsigns, as long as that "fun" doesn't come at the expense of the image of the ARS as a whole. Kim's callsign goes far beyond that, by giving a negative to the ARS, female hams in particular, and women in general. A triple-whammy. How charming!

Dwight:

Don't look now, but Riley does NOT have the authority to "eliminate"
anyone's callsign, unless they have violated FCC rules. Kim's selection
of her callsign is not a violation; this has been stated by Riley himself
in his "...one step closer to extinction" message. Riley does not
make the FCC rules, he just enforces them. His message to Kim was
his own personal opinion...one which did not have the desired effect
on Kim.

>Since he has not done so,
>he obviously does not feel that strongly about this issue.

I'd say that his response, in which he said

"While the call sign may fit the constitution, for every instance
where a parent or uncle or grandparent doesn't want a young person
to get involved in Ham Radio because of something they hear on the
bands, then you have taken the ARS one step closer to extinction."

constitutes a clear demonstration of how strongly he *does* feel
about this issue.

>In other
>words, the fact that he has not moved to affect the legality of the
>callsign clearly shows his overall lack of concern. And, contrary to
>your attempts to use him as an ally in this, his lack of concern does
>little, if anything, to support your argument (in spite of what he
>might have said).

Dwight, all you're doing here is demonstrating the same self-serving
attitude as Kim...or is it just plain ignorance? For the umpteenth time,
the legality of Kim's callsign is NOT THE ISSUE. Never has been.
Please try to "get it," the same why you keep pleading with me to
"get" the distinction between code *testing* and code *use*!

Oh, Larry. I am so sorry you took that as a threat. It was more a challenge. And, I am certain--absolutely certain--that Riley has at least heard of you. I am also absolutely certain that Riley probably doesn't think much of either of us and would probably have serious question about whether either of us does merit to the ARS. A side bet would be that a) he thinks you're worse than me; and b) at a minimum he believes your actions are far worse than someone's callsign.

Only thing is: I don't agree with him, or you, or anyone else about it [the callsign issue]. In fact, I wholeheartedly disagree with Riley about any of the "one step closer to extinction" comments. The folks who've been on HF for years and years and years--the ones who are there every single night with their racist topics of conversation, swearing, threatening to kill each other, or do each others' wives, etc.? You know the frequencies, you've heard the conversations. I haven't noticed a bit of extinction on their behalf. I haven't noticed a decline in the number of people in the hobby. I have noticed a substantial increase in the number of young people getting their license and getting on the air--whole schools involved as a matter of fact [thanks to the Big Project that the ARRL is undertaking].

Tell me about your extinction stories, Larry. Tell me all about it--wink wink.

Now, since you've generated the "callsign" discussion again (as you do each year around this time); I'll leave it to you all to discuss and re-discuss. You'll never have an impact on my thoughts about my callsign; it will never change as long as it is within the law; and I don't feel a bit bad about it. Now, if you want to waste your time breathing in and out over my callsign (and my tits), well....

W5TIT - Kim

Kim, I've been off HF for quite a few years (um ... since 1969!). I let the ticket expire around 1981 and decided to get it back and simply tested out in 1993. Currently I'm on 440 FM only although I am (this IS getting old) in the process of trying to get back on HF. I never got into contests. Never cared for 'em. I've operated during an emergency, I've helped with communications for a marathon, and I've run a number of phone patches (years ago) for the guys when I was on Guam. My usual mode is a good rag chew. I used to do that on SSB, CW, and RTTY. Heck, I used to yak with Norm, VK2NP, for hours on end from Guam on teletype and I suspect that I'll be doing that again with other stations once I'm back on the air. The 10 meter port on one of the local repeaters has provided a lot of fun though - including talking with a couple of VKs. I suspect that contesting (in a SMALL number of cases) leads to 'my signal is bigger than your signal' which at times can lead to jamming (and sometimes someone getting nailed for running multiple tens of kilowatts). No, go ahead and help yourselves to the contests; I'll stay out of 'em.

It doesn't matter. CW is not a proper tool for misbehaving. Choosing
CW for misbehaving is like choosing a BB gun to murder someone.

If one wants to misbehave, one would be stupid to choose CW except for
jamming purposes. Like anything else, the proper tool must be chosen
to match the goal.

Well, you're not going to get much argument from me with that. If diversity and tolerance were applied equally, instead of a weapon to strong arm the goals of those more interested in social engineering than unity in this country, I'd be their biggest champion also. However, until that situation changes, I'll add diversity and tolerance to the list of things that suck.

Well, I just can't get that upset about this, Larry. Kim is going to keep her callsign and there isn't a thing in the world you can do about it. So, about the only thing positive that can be said about this discussion is that it is good for a few laughs. And it is hard to take something very seriously when you're laughing about it.

Okay, perhaps "influence" would be a better word than "authority."
Regardless, if Riley really wanted to get rid of that callsign, I
don't doubt for a moment he could get it done. And, with that minor
change, my previous argument still stands.

Already answered in my message to Jim. However, since you know something about this, does Riley have any influence when it comes to the rules issued by the Wireless Telecomm Bureau? In other words, if Riley saw something he objected to, would he have the influence to get the rules changed to cover that?

And exactly what children are you trying to protect, Larry. A very young child is not likely to make anything out of Kim's callsign and an older child has seen, and heard, far worse on television and the school playground for that matter. I'm sorry, but in this day and age, the word "tit" would not even raise the interest of most kids.

If CW use is that interesting and rewarding, it will win fans on
it's own, Larry. Testing, on the other hand, has obviously turned far
more off to CW than it has turned on - only a small portion of the
large number tested actually use CW.

> countries.)

Jim, the laws being passed are not limited to just the FBI. The recent "terrorist bill" gave equal authority to local law enforcement - the guy down the street hiding behind an overpass waiting to write you a speeding ticket. And we have no more reason to believe that any potential law affecting torture in this country would be limited to federal law enforcement agencies either.

And I know it gives you great comfort to know you don't look like "those" people, but who knows how these laws will be handled in the future. Just look at how much the expanded RICO laws have been twisted over the years. I'm sure many of the people who supported those laws were equally convinced those laws would never affect them ("I'm not involved in organized crime").

You're not "getting it" Dwight (again!). If you're saying that diversity
and tolerance suck, then you're saying the American culture sucks.
I say diversity and tolerance are normal in American society, and
do not "suck" in any way. If you think that "diversity" and "tolerance"
suck, go try to live in North Korea, or some small African village.
There, *you* would be the "diversity," and I'm sure that you wouldn't
think that tolerance of that diversity "sucked."

Nope. There is a difference between reality and your silliness. My
callsign is not obscene, it is not vulgar, and it is not demeaning to
anyone. If only the same could be said for Kim's callsign.

I think you are quite mistaken, Dwight. Riley is essentially the "cop on the beat" - his influence is limited to choosing which cases to go after most aggressively. One of the check and balance protections of our governmental system is division of enforcement power between lawmakers, courts and LEOs.

Riley's "influence" in this area is limited to his speaking out about the issue the way he did.

What might get the call revoked is enough interested parties telling the FCC that they find certain callsigns inappropriate and objectionable. That hasn't happened yet.

btw, a 6-land variation of Kim's call has been in the callbooks since at least 1979 - and it is held by a person with the first name of Michael.

Sorry about your hearing loss, Cecil.

Another reason you cannot "hear" the signal but the box can decode it is that you are listening with a receiving setup that is not optimum for the mode, but the decoder box is using an optimal setup.

Weak Morse or SSB signals cannot be decoded without a heterodyne oscillator. Same type of situation.

Something which cannot be counted to be there on when needed is not reliable. Or, to use the exact engineering terms, it may have high performance but low availability.

Huh? That racism is the cause of the Affirmative Action program? If
you lived in Madison County, Texas, it would be a self apparent primary.
The tyranny of the majority is in full force here. If the power structure
here had their way, there would be no blacks employed by the local
government regardless of their qualifications.

Copy-cat. You may not be part of the Morse Code Creed lunatic fringe,
Dave, but I know quite a few hams who are. They are not good for
amateur radio.

372. The banned callsign list, was Great Fun with Callsigns

Newsgroup: rec.radio.amateur.policy
Date: 2001-11-07 15:42:31 UTC
From: mike coslo <mjc5@psu.edu>
Message-ID: <3BE95667.C885D2C2@psu.edu>
Source record: 23369

Well, I have heard other callsigns that evoke giggles, and wonder if there shouldn't be a banned callsign list. Especially since hams naturally make acronyms for their calls.

Part of the list of suffixes that might be banned:

BFD
GFY
FAM
AMF
DIC
NFG

And another thought, is that *if* Kim is doing this for attention and nose tweaking, then all this attention is giving her just what she is after. If she isn't doing this for that, than she isn't expecting comments and won't get them either. Win, win situation. I will assume she isn't doing it for the attention, and aside from this comment, won't give it any.

- Mike -

I coulda qualified for dunking a basketball! Or how about making slapshots? Boy, I'd be extra plus if they had that!

Although I did the Morse part because I wanted the license badly, it was the hardest part of the whole testing for me. My hearing problems make it a hard hard thing to do to work Morse. The new psk31 mode is where I spend most of my time, as the type written on the screen isn't distorted by the roaring I hear in my ears 24/7.

There is a curious contradiction here with the people who think the morse code requirement is easy, yet anyone who is against it (or in some extreme cases doesn't use it) is stupid. Doggone it! After a while it gets annoying! I don't use CW because it isn't any fun for me. I proud I did it, and if I can do it, probably most people can.

But, I suggest that these folk pick something (probably more relevant than basketball or hockey) that is really hard for them, that they can only pass with months of hard effort, and all the while, other people can call them stupid and lazy while they are struggling to learn.

I know some people in my area who have passed the CW portion, but are struggling with the written parts which I've never had trouble with. Maybe I should call them stupid and lazy?

You know what? I actually have to agree wrt the prices. I ordered an item from HRO on Tuesday morning and it was delivered on Wednesday afternoon. Re. the "sales guy," I believe he's gone. I'm pretty sure I know who you're talking about. The guy that's there now can be annoying, (He does put on "the sell.") but he's friendly. The "other" fella was just plain rude.

Actually, no I wasn't. Here's the posting: (I can still see it above
this one in the thread.)

Let be clear not to confuse the word 'citizen' with the words 'traitor'
and 'terrorist', Dwight. I wouldn't be entirely opposed to hooking up
the latter to an IV filled with happy juice in order to get them into a
'chattier' mood.

The terrorist bill authorizes torture? Wow, the media sure missed a big
story there.

> And I know it gives you great comfort to know you don't look like
> "those" people, but who knows how these laws will be handled in the
> future.

Not only that, I'm not a member of any terrorist groups, nor do I
associate with members of terrorist groups or other criminals. I'd say
those kinds of activities would be inadvisable if you want to stay below
the law enforcement radar.

'zactly. As I heard it, the original F-4 design did not have a machine
gun, because it was thought by Those Who Know that the days of the
aerial gunning dogfight were gone, and the air-to-air missile would
decide those encounters. Didn't work out that way.

I did not know that!

The Japanese and Germans had better submarine technology in WW2 than
we did, but the top folks did not know how to use it properly, and did
not have enough of it. Had Germany put the resources wasted on
Bismarck and Tirpitz into the construction of more and better U-boats,
the Battle of the North Atlantic would have been even worse for the
Allies than it was.

This will happen in the long run. The Taliban will either be pushed
out or they will find a way to deliver OBL & Co. without "losing
face". Then billions of "humanitarian aid" will pour in to rebuild
Afghanistan.

> If they could hold
> out about another six months, a major fiasco would be brewing.

Winter is on the way. They don't send the 10th Mountain Division from
Fort Drum to do jungle ops.

> May very well get one anyway.

Sept 11 wasn't the Gulf of Tonkin. More like Pearl Harbor, the Titanic
and the Challenger all rolled into one, only worse.

In other words, you got a big lunch at the Reality Deli. A mayor of
Philadelphia once said: "A conservative is a liberal who just got
mugged".

You and I are almost the same age and grew up in a very confused era.
I had the good fortune to grow up in a place where things like the
realities of city-type life and "addytoods" are very clear.
>
> Nope, I am no longer willing to feel like I am in an extremely small

> think I could do something about it.

The first thing that has to happen is a clear definition of what the
"different world" should be, and how to get there, and what's in it
for all of us. This is where the peaceniks and beatniks etc. fail

miserably - they focus on all the wrong things.

> I have property; yearn for a bigger,
> better yard; ignore government (and the rest of the world) for the most
> part; don't think twice about paying taxes--just tell me how much I owe;
> just bought a foreign vehicle--ask me if I care;

Nothing wrong with any of that.

"Foreign" vehicles are often made here in the USA (Honda, Toyota,
Nissan, Subaru and BMW all have plants here), while "American"
vehicles often have huge "foreign" content.

Would you have bought the car you did if you knew some of the price
was going to wind up funding terrorism?

I understand your definition of "friend" as opposed to "acquaintance".
Most of us are in the same boat, if for no other reason than time.

You're talking on a personal level, Kim. I'm talking on a societal
level.

The USA used to be a pretty independent place. We grew, mined and made
virtually everything we needed. In fact, we had trade surpluses. But
since WW2 the USA has become more and more dependent on things like
cheap foreign oil to keep us going. The result is that our wealth is
being exported, and some of those who get it are using it against us.
We Americans keep "enabling" those who hate us and everything we stand
for, then we are mystified when they get violent.

The answer is that we have to become more, not less, concerned about
America and what needs to be done for ourselves. This isn't some deep
philosophical exercise, but rather a practical one where we focus on
the long term rather than the short term. Our freedom depends on not
being dependent.

The kinds of changes I'm talking about are things like ending our
dependence on foreign oil. Focusing less on being the world's
policeman and more on keeping our borders secure and our country safe
from outside aggression. Learning to "vote with our wallets", which
has far more effect than people realize. Building up our own basic
infrastructure so that we don't have nonsense like the rolling
blackouts in California. "Sticking to our knitting", it used to be
called.

Most Americans today simply don't see the connection between their
behavior (like what car they buy and how they use it) and world
events. That has to change, or we will have more Sept. 11ths.

73 de Jim, N2EY

btw, Texas used to be a net exporter of energy. That changed about ten years ago, to where Texas is now a net importer of energy.

The correlation is that competitors very often employ CW as a useful
points gathering tool. The reverse of that correlation is not
necessarily implied, or valid.

Well, I've tried SSB, CW, and PACTOR. PACTOR II beats all of them
by a long shot.

Many don't see the correlation between code testing and usefullness. I saw an argument here that it's a "basic communcation skill." That may very well be, but by the same comparison, riding a bicycle is a basic transportation skill, yet one doesn't have to prove such ability in order to obtain a driver's license. When the pro-code testing crowd sees that you apply the same logic towards their sacred cow, you're then a stupid, lazy, dumded down, liberal.

Of course. He'd walk over to Bill Cross' office and start with
"Hey Bill, I think that....."

That's how we got the logging and notification changes through in
the '70s.

Sort of an in-house RFRM......

I vote "aye"!

But the QCAO would gain tens of thousands of members overnight.
K3LT, W5YI, W5NET, and W5TIT would be on the Board of Directors.

With all kind wishes,

de Hans, K0HB

News Release: de K7SS
QCAO Reorganizes

The Quarter Century Appliance Operators was founded in the
early 1950's by a small group of Amateur Radio operators from
the Pacific Northwest. They had been active in their hobby for
over 25 years, yet still lacked the basic knowledge of radio
electronics and had no idea of how their equipment worked.

They banded together to try and protect each others honor
and pride. At radio gatherings and club meetings in the 1950s
one was considered unworthy of the name Ham Radio Operator if
he or she couldn't not only name components, but know how to
solder them together and make a radio work, or fix a broken set!

When faced with insults and dreision, those few hardy
pioneers banded together and formed the First Chapter and
National Organization of the QCAO. This was known as the "Cold
Solder" Chapter. They even coined the now-famous club byword
"e pluribus ignoramae" which is Latin for "We don't have to know
how to solder, we just wanna talk on our radios."

No veterans of that first chapter are known to be active on
the air today. In the late 1950s and early '60s, with the
worldwide interest in science and space and technology, the QCAO
membership went underground.

It is with great pride and dignity that today in the 21st
century that the revived QCAO stands ready to rise from the ashes,
and become the standard of mediocrity it once proudly was. In
honor of those first pioneering members, QCAO hereby invites all

eligible applicants to step forward and join!

The benefits of QCAO include not only the pride of membership. Think of the warm glow you will feel at club meetings and gatherings showing off your new all-plastic imprinted QCAO pocket protector! And that's not all! For your minimal membership fee, you will also receive a handsome, suitable-for-framing, certificate of honor, with hand-lettered name and Charter Membership Number. Other QCAO memorabilia will soon be available for members, including T-shirts, caps, pins, etc. At this date charter membership numbers are still available. Membership requires a 25 years (more or less) interest in Amateur Radio, coupled with a basic ignorance of how radios work and how to repair them.

Think of meeting other QCAO members on the air! No more embarrassing pauses when someone in the QSO mentions an RF choke or a parasitic bleeder...Be able to exchange meaningful sharing, talk about real things, yes, even swap QCAO numbers with each other! And soon perhaps . . . a worldwide QCAO contest!

You no longer have to shrink to the back of the room at post-meeting sessions of your radio club. Just display your QCAO protector and others will be able to identify you immediately. Who knows? Perhaps one of the originals from that old QCAO Chapter is just waiting for you to find him. Join now! Remember "We don't have to know how to solder, we just wanna talk on our radios"! Don't let technoids embarrass you and kick jargon in your face. Stand up for what's right! Join QCAO!

"e pluribus ignoramae"

I use a Kenwood THG-71A with the Maha NiMH 1600 Mah battery pack. Does 6w on 2m and 5w on 70cm. You can also buy a light weight VOX headset that plugs right in to the HT, and is powered off the HT battery pack.

http://www.kenwood.net/products/index.cfm?AMA=open&ama_hheld=open&radio=TH-G71A&selection=Amateur&ID=50

Another good HT would be the Yaesu FT-50R.

http://www.yaesu.com/amateur/ft50r.html

I would stay away from the super small rigs like the Yaesu VX-5R, not because they're bad rigs, but because they are TOO small. What many people forget is the case of the rig is used for the heat sink for the final PA section. A smaller rig gets way too hot way too fast at high power. You want something small to fit on your belt, or in your pocket, but still allows a useful TX duty cycle without burning your hand trying to hold the thing. The super compact rigs are mainly aimed at monitoring with a very low duty cycle TX. I assume you want one for emergency use so you will be doing a fair amount of transmitting I think, so consider a rig that can handle it.

Diversity sucks?

Tolerance sucks?

Sorry, but those are bedrock qualities on which our country
is built!

On my little one-block street we have people who belong to
4 different religions that I know of (Protestant Christian,
Roman Catholic Christian, Muslim, Jew). We have three ethnic
groups (caucasian, african-american, oriental). We have a
single mother, a gay man, 2 ham operators, republicans, democrats,
gun owners, a PETA member, and any number of other "diversities"
that I haven't counted. If we draw a bigger circle, let's say
20 blocks in radius, I could probably add 100 more "diversities"
to the list. It is an incredibly rich set of "diversities" that
probably wouldn't be tolerated in all but a handful of other
countries on this planet, let alone in a single small neighborhood.

And you think "tolerance" of "diversity" sucks? You are a
truly sick pup!

With all kind wishes,

de Hans, K0HB

I actually support the notion of having to build a radio, to FCC specifications, and not a kit, to get an amateur radio license. Or, something like having to build and connect altogether a packet station--with equipment provided by the FCC or approved examiners. Or, build an antenna capable, without tuning, of transmitting within 3:1 or lower SWR.

Anything, anything but testing a mode.

Leave me off the Board of Directors, though. a) Larry is there; and b) the above stringent requirements would leave me out of the hobby.

Kim W5TIT

>Of course they are. Grinding flour is a basic skill that is outmoded.

Since when have people stopped eating bread, pasta, etc.? And there isn't much skill to it.

Besides, nobody grinds flour. They grind grain, and the result is flour.

>The list of basic skills that have been outmoded by science and
>civilization is virtually endless and Morse code is on that list.

Science doesn't outmode anyhting. Engineering does.

"Scientists dream of doing great things. Engineers do them" - Werhner Von Braun

And Morse code is not outmoded in ham radio. Last weekendm in the ARRL CW SS I worked 309 different stations in 75 ARRL sections using the mode, in about 12 hours. Used a 5 watt transceiver and an inverted V at 35 feet. Those totals are no big deal - folks with better setups and more stamina than I contacted well over 1000 different stations in 24 hours. And the SS is just a weenie domestic contest with a long exchange. The DX tests are even bigger and bring out many more stations.

Pretty good for something that is allegedly "outmoded".

That isn't exactly what you stated is it, Cecil? Go back and read your
own statement and we'll talk further. As to Madison County, Texas: I
don't know about your county. I do know that prior to affirmative
action, the top scoring candidates received civil service jobs.
Standards were lowered under the quota system of Affirmative Action.
It doesn't really matter since your use of the Affirmative Action label
in comparing it to Morse testing was incorrect. You had it backwards.
This latest tangent is simply a Cecilian diversion.

There isn't a Morse Code Creed lunatic fringe, Cecil. Further, I'd no
more depend upon you as a source for what is good for amateur radio than
I would depend on "USA Today" for all of my news.

Please pay attention. I objected to law-abiding citizens losing
constitutional rights in the process of trying to catch terrorists.
Dick said (in so many words) that we cannot catch the terrorists
without taking constitutional freedoms away from law-abiding citizens.
I said his approach was playing right into the hands of the terrorists
and that law-abiding citizens need not lose any constitutional rights
during the process of catching the terrorists.

constitutional
> rights then no citizen possesses them.

US citizenship is easily proved and Mohammed Atta and his crew were not
citizens.

What rights do you think terrorists are entitled to that they haven't been
afforded?
****
I responded to your response to my posting:
Jim Kelley wrote:
> US citizenship is easily proved and Mohammed Atta and his crew were not
> citizens.

Who said they were?

> What rights do you think terrorists are entitled to that they haven't been
> afforded?

We're not discussing terrorists, Jim. We are discussing American citizens
losing constitutional rights. I'm against it. Dick thinks I should be
for it as he apparently is.
****
You wrote:

CAM wrote:
> We're not discussing terrorists, Jim. We are discussing American citizens

I'm talking about federal jobs, Dave. If it had been left up
to the local school board here, there never would have been a black
teacher in the schools around here. In my home county, the affirmative
action program forced the local racists to honor the civil rights
laws.

> There isn't a Morse Code Creed lunatic fringe, Cecil.

Of course there is, Dave. I have it on good authority that there
is an underground organization of lunatic fringe hams. The
organization is the Morse Forever Society Of Beepers (MFSOBs).
I know a few of them personally.

So do you grind your own flour, Jim? Do you make your own weapons? Do
you manufacture your own light? Do you raise your own cows? Do you make
your own clothes? The statement was that some skills are outmoded by
progress. The fact that virtually all radio services except a hobby
has dropped Morse code use is prima facie evidence that it is outmoded.
But lots of things that are outmoded are useful and fun within hobbies.

> And Morse code is not outmoded in ham radio. Last weekendm in the ARRL CW SS I

Last weekend I rode a horse. That doesn't keep horses from being outmoded
for most acts of transportation.

> Pretty good for something that is allegedly "outmoded".

It's a hobby, Jim. Lots of people enjoy outmoded stuff as part of their
hobby. I load my own ammo. I preserve my own figs. I brew my own beer.

>>license, and a reduction to a single class of license.
>
>That is all public knowledge...but taken out of context from
>my 13 January 1999 14-page-text Comments on 98-143.

How is it "out of context"? You proposed both those things to the FCC, and confirmed them here.

You claim that you are only interested in ending the code test. The above statements to the FCC prove that is simply not true.

btw, the comment period for 98-143 closed December 15 1998 and the reply comment period closed January 15, 1999. Reply comments are supposed to ONLY involve rebuttals to comments submitted by others, NOT new discussion. While most of your reply comments were indeed replies/rebuttals to others' comments, the age-limit and one-class proposals were not. You did not file comments during the comment period, and you waited to the very end of the reply comment

period to file.

>My suggestion to the FCC on age limits was the LAST item
>in those 14 pages, prompted more by the (referenced) "news"
>from the ARRL of two six-year-old new amateur licensees.

So? Does the order matter? You want an age restriction - that alone disproves your claim of wanting nothing other than an end to code testing. QED.

And you said they were four year olds in the reply comments. But you provided NO evidence that youth has any correlation or causation with problems in the amateur radio service.
>
>The main part of my Comments on 98-143 concerned the
>elimination of the morse code test for any class amateur
>radio license, followed by the elimination of the "class"
>distinction to eventually lead to only one license.

Which also disproves your claim of being ONLY interested in ending the code test. QED.
>

Recommending CW because it promotes good behavior is like recommending
walking to eliminate traffic deaths. Why do we need to promote walking
through governmental requirements? People who want to walk do so. People
who don't want to walk use a vehicle and take their chances. What's
wrong with freedom of choice?

No, you're not getting it, Larry. Again, if diversity and tolerance were applied EQUALLY, TO ALL in this country, I'd be a champion of those concepts too. But, that is not, AT ALL, how those concepts are being applied today (and THAT sucks). Now, I'm not going to sit here and explain why that is true because it would take an entire book to do so. So, I'll recommend a book instead. Try...

The Myths That Divide Us - How Lies Have Poisoned American Race Relations

http://www.atlasbooks.com/marktplc/00548.htm

It is an excellent book (over 600 pages, with 126 of those pages listing government documents, media sources, and other reference material for the book).

By the way, the fact that I don't champion those concepts does not mean that I have no tolerance for diversity. What it means is that I want that tolerance to be expanded to include ALL Americans.

I assume that you meant that you are *not* talking about Federal jobs. Fine. So if a teacher does not meet the standards set for a teaching job in your area, you feel that it is fine to reduce the standards and allow an unqualified person teach your kids. Now I have a better handle on how you think. Aside from that, this is all diversion on your part since your little "Morse Code Affirmative Action" scenario was backwards. The diversion didn't work. I still remember what you wrote.

If it is an underground organization, why would they let you in on the secret?

Don't cut off part of my message, the part that clarifies my position, and then attack what is left, Hans. I said _UNEQUAL_ diversity and tolerance, diversity and tolerance used as a weapon by those more interested in social engineering than unity, sucks. Sadly, there doesn't seem to be much tolerance for concepts like equality and unity in this newsgroup.

Well, to be honest, I don't know for sure one way or the other. It just seems to me that someone as visible as Riley has been over the last few years would at least have some influence with those responsible for the rules. But, perhaps you're right, so I'll let it go with that.

I thought so. It just didn't seem likely the different departments (sections, or whatever they're called) would be so isolated as to not heavily interact with each other, or those in more senior positions. And as visible, and as outspoken, as Riley has been over the last few years, he has to have some fairly strong backing somewhere in that agency (which generally leads to some influence).

But it is interesting how you describe it. Is it really that casual to get changes like the logging and notification you mention started? Have you ever considered a book on the day to day inner workings of the agency? I don't know how much of a market there would be, but I'd sure be interested in reading about how some of the more significant changes over the years went down (the people involved, the positions they took, the reasons behind the changes and the various positions of the people, how they perceived the outside reaction, some of the enforcement efforts, some of the more interesting cases, and so forth).

> Wow, the media sure missed a big
> story there.

Reading comprehension problem, Jim? I mentioned three things in that paragraph;

1. "...the laws being passed are not limited to just the FBI."

2. "The recent "terrorist bill" gave equal authority to local law enforcement - the guy down the street hiding behind an overpass waiting to write you a speeding ticket."

3. "And we have no more reason to believe that any potential law affecting torture in this country would be limited to federal law enforcement agencies either."

Where in any of that did I say "the terrorist bill authorizes torture?"

> Not only that, I'm not a member of
> any terrorist groups, nor do I
> associate with members of terrorist

Have you looked up the definition of "terrorist," Jim? Given enough creative interpretation, even the Girl Scouts could be defined as a terrorist group - they pound on our doors and threaten us with those

darn cookies every year (some consider sugar harmful).

> And thus aren't affected by them. Have
> you been affected by the RICO laws,
> Dwight?

No, thankfully I haven't. However that doesn't mean that I haven't read about those who have been unfairly affected, and the harm that has caused to those people.

If that is true, show me where the book is not factual, Hans? That book contains material, reprinted by permission, from HarperCollins Publishers, Random House, the Associated Press, Tribune Media Services, Georges Borchardt, the New Republic, the New York Times, United Media, Simon & Schuster, the Hoover Institution, US News & World Report, Beacon Press, William Morrow & Company, National Review, New York's Daily News, New Perspectives Quarterly, Saint Martin's Press, the Washington Post, various government agencies, and a number of other sources. Are all those organizations intolerant and darlings of the KKK and skinhead groups too? Or do you just define anyone who disagrees with your views, whatever they base those views on, as intolerant and a darling of the KKK and skinhead groups?

> allow an unqualified person teach your kids.

That's absolutely not what I said. What I said was that exceptionally
qualified black teachers were passed over so the job could be given
to some school board member's unqualified dumb $hit white cousin.
I would rather have a qualified black person teaching my children any
day than have some dumb $hit low-IQ white idiot teaching them.

I'm sorry you seem to support such a racist system. I'm glad
to see that system has been corrected to a large extent. Before you
object, why are you allowed to jump to irrational conclusions and
I'm not?

> If it is an underground organization, why would they let you in on the

I don't know who John Perazzo is. Let's assume that his is, indeed, a
darling of the KKK/Skinheads/Neo-Nazis. It's not uncommon for someone with a
certain agenda to do "research" and only include facts that fit their
agenda, ignoring anything else. Witness the rantings of Gary North, The late
William Cooper, and ham radio's own Wayne Green.

Sure, Dwight. As I told Cecil, I am too stupid to understand anything I read on this newsgroup - if that helps you make your point of debate.

> 1. "...the laws being passed are not limited to just the FBI."

didn't say they were

> 2. "The recent "terrorist bill" gave equal authority to local law
> enforcement - the guy down the street hiding behind an overpass
> waiting to write you a speeding ticket."

Gives authority for torture? I don't think so.

> 3. "And we have no more reason to believe that any potential law
> affecting torture in this country would be limited to federal law
> enforcement agencies either."

What is a potential law?

> Where in any of that did I say "the terrorist bill authorizes torture?"

You keep talking about torture in connection with the terrorist bill. Why?

> Have you looked up the definition of "terrorist," Jim?

Nope. Though I guess you had to look up the definition of terrorist in order to know what one was. Jeez, and you think I'M stupid?

Do you object to terrorists losing their "constitutional rights" too?
So far, you haven't demonstrated that ANYONE has lost any rights.

> Dick said (in so many words) that we cannot catch the terrorists
> without taking constitutional freedoms away from law-abiding citizens.

Yes, and I was responding to Dwight when you jumped in to yell at me
about it.

>
> I wonder if there is a correlation (unproveable) along the lines of
> "attitude."

Yes. The correlation is between contesting and competitiveness.

> I wonder if competitiveness is a factor in whether one likes
> and/or uses CW?
>
Nope. I know lots of ops who love CW but hate contests, and vice
versa. No correlation there. It's not a "guy thing" either.

As W3RV says, contesting is one form of radiosport. DXing is another.
Radioorienteering is another. Some folks love competitive sports,
others hate them, etc. Healthy competition is a very good thing.

SS is a good domestic contest, but it's only 30 hours long (of which you can only operate 24) and the exchange is quite long. Last year CW SS produced over 1200 logs, and the winners worked over 1500 different stations. 1440 QSOs in 24 hours is a QSO every single minute for the entire contest period.

The DX tests, with their much longer operating periods and worldwide scope are the World Series/Super Bowl events. Last year's ARRL CW DX test got about 2900 logs, with the winners bettering 2100 QSOs.

Whether Field Day counts as a "contest" is arguable.

Contests offer a way to rapidly build operating skill and test equipment capabilities under tough conditions. The desire for higher scores has pushed the development of many ham radio technologies, like antennas, amplifiers, receiver front ends, total station integration, etc., etc. First common use of computers in hamshacks was for contest logging. These are all good things.

Wait till next year!

That's a contradiction, Kim. No ham is required to use code, and no ham is required to build a rig or antenna, or work packet. Why is it OK to test for those things but not code?

Some years back I put forth the idea here on rrap of a "Homebrew Class" license. No code test, full privileges, fairly involved written. Only one special rule: the holder of a Homebrew class license could ONLY use equipment built by the operator.

I live in "county" out here--outside city or town limits. However, in town, I thought it was very interesting that the usual 30mph applies *until* the first house on the black side, then the speed increases to 40mph. Another interesting thing is the cemetery(ies). One is at one end of town and I am told that no black person is buried there; the "blacks" are buried in their own cemetery, which is on the "black" side of town. Now all this "stuff" is what I've been told by some very mean and weird acting people.

I don't ask questions.

I dunno. Twelve, maybe thirteen. Or something. I was in Aldan Junior
High when I got the Rado Merit badge. But I distinclty remember that
when I wuz in fifth grade (1948?) old lady Fisler tossed me outta her
classroom and made me sit in the hallway for dorking around trying to
find the hot spot on the Galena xtal in the radio I'd built into a
WWII USAAF headset in the back row of her classroom. I wuz always
"back row" kinda kid. Getting tossed out worked for me, there wuz a
helluva lot more space to string antennas in the hallway.

That (paraphrased) is also what I have understood Dick to be saying. And, I am in agreement with Cecil: we play right into the hands of evil doers when law-abiding citizens lose constitutional rights, and I'll add civil liberties, in the process of our government trying to catch terrorists.

I even go farther, I think, than Cecil or Dwight are willing to. I agree wholeheartedly with public access situations being under strict control. Why? Because they are public access areas (football games, grocery stores, shopping centers, airports, transportation terminals, whatever), and I have a *choice* as to whether I wish to be scanned and my belongings searched going in.

But, leave out phone/wire tapping, and *any* mechanism that impinges on private life/transactions in this country--regardless of whether or not I am a citizen, naturalized citizen, here on a Visa, or whatever. Whether or not I am killed by a terrorist, I'd rather die free than under the possibility of surveillance by my own government because "someone" thinks I am a terrorist.

The current anti-terrorism Bill, while making clear that the intention is to direct the actions toward non-US citizens, does not say or imply that it is exclusive in any way to other "types" of terrorism. By the way, I still have not found a definition for terrorism.

To me, testing a mode "singles" out a mode and creates the very situation which exists today in the huge debate of CW vs. no-CW.

To leave CW as a testing phase of licensing does not prove (or disprove in the case of failure) one's aptitude for anything related to ham radio--other than CW use. It does not prove credibility in the area of operation, ability to properly operate, or anything to do with safety.

If a "construction" project of some sort were to be brought into the testing arena, it at least proves that the ham is aware of FCC specifications, rules, regulations, and guidelines. While it is not required that I build anything once I am a ham--a successful building project that meets specifications of the FCC will assure the FCC--and *should* assure hams--that the new licensee at least knows something about the R&R.

PLUS I think getting rid of CW testing without something to take its place will really piss off a bunch of people. I'm willing to have CW testing ousted, and feel that a building project is a more favorable way to "test" one's commitment to ham radio. Hence, I would be out--because I truly just want to know the R&R, buy what I need to operate, aren't the slightest bit interested in why things work, and so would not really expend the effort to build anything for a license, either. CW, to me, was a piece of cake compared to having to learn anything related to getting RF power from Point A to Point B without blowing anything up.

But, Cecil, Affirmative Action is a quota system which lowers standards
for those incapable of meeting the standards which stood in place.
Civil Service, by the way, does not only refer to Federal Jobs but to
state, county and local governmental jobs. I'd rather have an
intelligent teacher teaching my kid than someone who could not pass the
teacher's exam. My statement does not address color.

> I'm sorry you seem to support such a racist system. I'm glad

I am wondering if Mr. Hollingsworth is paying more attention to some of our maritime and traffic nets since Sept 11th?

Am I the only one who sees a connection? I mean I think that some of these terrorists could have valid ham tickets and use these nets to pass traffic related to thier acts of terror. Should we exmaine the ranks of the nets and see who is middle-eastern and be on the look-out? I think its time we did.

Yes, you probably are the only one.

Previous two attempts to send this message were truncated
by the newsreader gizmo......

"Kim-W5TIT" says:

> I'm willing to have CW testing ousted, and feel that a
> building project is a more favorable way to "test"
> one's commitment to ham radio.

"Commitment" has nothing to do with it.

Hang around here long enough, and you will see someone write
something like:

" A really tough written test would surely separate those
who really have an interest in the hobby.", or..

" Other, more relevant, methods can establish an applicant's
dedication to the service.", or..

" I think it is effective at minimizing the undesireables.",
or..

" ..... the key to maintaining the quality of hamming is
making it something to work for.", or..
.
"My opinion is that any obstacle you put in the way to any
achievement guarantees that only those with dedication and
strong interest will get there."

All of the above quotations, gathered from RRAP threads, were
made by serious and well-intentioned licensees who want the best
for the Amateur Radio Service.

All of the above quotations also completely miss the mark, in
that they suggest that the examination process is the key to
ensuring that "the right kind of people" (those who are
"worthy") become licensed and, by extension, that "the wrong
kind of people" get filtered out.

First, the testing procedure is an "entrance" exam, not a
"graduation" exam.

Second, while "interest", "dedication", and "hard work" are
certainly hallmarks of good amateurs, the FCC and ITU regulations
do not specify levels of interest, dedication, hard work or other
measures of "worthiness" as requisites for a license. Therefor it
is not the function of the examination process to determine (even

if it could) if an applicant is "worthy" but rather to determine if he/she is QUALIFIED to use the spectrum assigned. There should be no "dumbing down", but neither can there be a requirement that the examination process screens out applicants who lack "commitment".

Don't get me wrong here, folks. I believe that the examination process ought to be rigorous enough to determine proper knowledge and skills so that a new licensee does not inadvertently trash the bands, hurt themselves, or harm other users/uses of the spectrum. I am not even suggesting that Morse testing is a "good thing" or a "poor idea". But I have no expectation that ANY examination can filter out "unworthy" applicants who lack the proper "commitment", "dedication" or "motivation".

Even if it could, who then would become the arbiter of "worthy"?

Yeah, since they dropped the code requirement to operate on 75m, the
quality has really gone down.

Oh. Wait.

Would you like to rethink your premise?

469. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.policy
Date: 2001-11-09 06:17:36 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <9sfse0pof1@news.hawaii.edu>
Source record: 23516
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any amateur radio-related message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information

posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis- trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is NOT the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists
==========

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent. This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

470. Veteran's Day, 2001

Newsgroup: rec.radio.amateur.policy
Date: 2001-11-09 08:08:04 UTC
From: k4yz@aol.com
Message-ID: <20011109030804.16759.00002598@mb-da.aol.com>
Source record: 23517

Well, this year certainly finds us in a strange, new world, doesn't it? I don't think there is a veteran alive who could have ever (realistically) concieved of the events tht have occured in our Great Nation, but they have, and a terrible war has been brought home to us. We did not ask for it, but it is here and we have responded. Once more into the battle....

For those of us who have served overseas and under arms, I don't think there is a one of us that "welcome" another conflict. I for one continually hope that "this one" will be the one to open other's eyes as to the horrors of war, but even with nearly-instant reporting of the horrific results of it, it never seems to be enough...

How sad.

I find it hard to say "happy" Veterans Day...What can be "happy" about remembering that someone, somewhere had to die in order for there to BE a "Veteran's" day...

So to each of you who have served under arms, conscripted or volunteer, in peace or war, "declared" or not, I say "thank-you". Thank you for your service and Thank-you for your sacrifice. It is appreciated more than you could ever know.

You may well be right, but given the apparent proportion of
whackos on shortwave it may be nigh on impossible to sort
out the ones of interest. Then again, wouldn't it be a bit like
using a licensed gun to commit your crime? Why would they bother
to have a license?

True, but I've seen that type before. I'm just not into extremism - on either side. I don't buy the BS from the KKK/skinhead fanatics and I don't buy the BS from the "diversity and tolerance" fanatics. In the end, both groups of fanatics are just about the same - no diversity of opinion allowed and intolerant of any views other than their own.

I tend to sway more towards the middle. For example, there are problems for each racial group in this country ("blacks" and "whites" for example). And unless we honestly address these problems equally, they are not ever going to end. Sadly, both of the groups above don't seem to realize that - the KKK/skinhead fanatics point fingers at the "blacks" while the "diversity and tolerance" fanatics point fingers at the "whites." In reality, the rest of us in the middle should be pointing fingers at both of these groups - and extremism in general.

>To me, testing a mode "singles" out a mode and creates the very situation
>which exists today in the huge debate of CW vs. no-CW.

It's not even a debate to most hams. And the FCC has made it clear where they stand on it.

Your proposal to test a packet setup singles out a mode, too.
>
>To leave CW as a testing phase of licensing does not prove (or disprove in
>the case of failure) one's aptitude for anything related to ham radio--other
>than CW use.

A CW test is only needed for access to the HF/MF ham bands. CW use is VERY related to ham radio in those bands.

The test determines whether the person being tested has a very minimal skill level, too.

> It does not prove credibility in the area of operation,
>ability to properly operate, or anything to do with safety.

Neither do the current written tests.
>
>If a "construction" project of some sort were to be brought into the testing
>arena, it at least proves that the ham is aware of FCC specifications,

The only way folks would be out would be if mandatory retesting were instituted. Not gonna happen.

>CW, to me, was a piece of cake
>compared to having to learn anything related to getting RF power from Point
>A to Point B without blowing anything up.
>
That's what transmission lines are for.

On top of all this, such testing would be too dependent on the subjective judgement of the VEs. These days such tests simply wouldn't get through federal regs.

--

How about this idea:

Divide the bands into three segments: CW, digital, analog voice. Separate licenses for each moce - if a prospective ham wants access to the parts of the bands used for certain modes, they have to pass tests on just those modes. All hams have to pass a basic test on safety and general regs.

Read the book, Krell.

http://www.atlasbooks.com/marktplc/00548.htm

"John Perazzo has marshaled compelling facts and persuasive arguments showing that what was once a moral struggle for civil rights has turned into a racial spoils system. The Myths That Divide Us shows where we've gone wrong and what needs to be done to accomplish the original goals of the civil-rights movement." --Dr. Walter E. Williams, Distinguished Professor of Economics at George Mason University

"John Perazzo's book blasts us beyond the myths of 'racism' with a shocking incandescence of truth that will inspire all who do not have a political stake in the lies of hate." --George Gilder, author of Wealth and Poverty

"Perazzo exposes the hypocrisies of 'civil rights leaders' like Jesse Jackson, Al Sharpton, Louis Farrakhan, and Leonard Jeffries in the most devastating of waysï¿½by using their own words and deeds. His case is backed by a seemingly endless string of anecdotes, facts, and statistics. This book is well researched and a valuable resource for anyone involved in the race debate." --Andrew Oliver, National Review

"The myth that most divides us is the myth that whites are relentlessly racist, that virtually all the failures of blacks can be explained by the anti-black malice that permeates America. John Perazzo dissects this myth with the coolness of a surgeon and the passion of a patriot. Our country can make no progress in race relations until we grasp the hard truths this book so eloquently lays bare." --Jared Taylor, author of Paved With Good Intentions: The Failure of Race Relations in Contemporary America

"John Perazzo's The Myths That Divide Us attempts to restore common sense and decency to issues lost in a sea of wishful, self-serving thinkers." --Phil Mushnick, New York Post

"Perazzo is a skilled writer who puts forth a most convincing argument that Martin Luther King's dream and worthy principles of racial harmony have been suborned and perverted by self-serving civil rights leaders who find racist bugaboos everywhere, everyday, to justify their own positions, power, financial backing, and political influence. Moreover, he shows how any critic who challenges them is immediately labeled a racist." --Independent Publisher

> Well, to be honest, I don't know for sure one way or the other.

I think it all depends on what the implications of a rule change are. It is clear from inspection of the callsign database that there are some calls that the FCC does not routinely issue. Look up calls ending in TIS or TIU, and you'll see almost all of them issued. Most of them are not vanity calls, either. Look up Kim's suffix and you'll see very few issued. The policy is obvious - certain calls are only issued if the licensee asks for them and is entitled via the vanity call rules. Kim ASKED for and paid for that call.

Refusing to issue that call, or trying to revoke it, would put the FCC in a tough spot. All other calls with the same suffix would have to be revoked or refused, too. Kim might have a really good discrimination case - after all, the person holding the W6 version has held it for more than two decades. She obviously doesn't find it offensive, and could probably produce lots of witnesses from the local amatuer radio community supporting that view. Riley & Co. know better than to get involved in such murky waters. Plenty of worse violations to go after. Look at the W6NUT repeater mess.

> It
> just seems to me that someone as visible as Riley has been over the
> last few years would at least have some influence with those
> responsible for the rules.

I'm sure he has some influence in how the rules are enforced and interpreted. But any decent LEO will tell ya that ya go after the clearcut big violators first. Specially when resources are so limited. And key elements in deciding what to go after is "who is being hurt?" and "what complaints have been filed?". Has anyone who has heard Kim's

call ON THE AIR actually complained to the FCC? I don't think so. End of story.

We only have Riley because the ARRL and others begged for YEARS to get him.

I would tend to believe this if the recent raids would have produced ham radio equipment. I don't know if they have or not. Your idea is nothing more than speculation at this point.

The problem that Affirmative Action was trying to solve was just the
opposite - fully qualified individuals not being employed because of
their skin color. In places, the pendulum has swung the other way.
That's unfortunate but the predictable outcome of racism. Racism is
directly responsible for the Affirmative Action program.

> I'm sorry that you seem such an uncomprehending fool too.

I was simply treating you the way you were treating me. You
engaged in mind fornication toward me. I mirrored that action
right back at you.

> out of phase?

They are both social engineering programs, Dave. In that way,
they are entirely similar. Not enough blacks on the police force.
Not enough Morse code operators. Why do you attempt to deny reality?
Morse code seems to some not to have enough merit to survive in a
free market of modes. That's exactly like Affirmative Action.

Hi Jim...

I think you mean 4 tests... three licenses... and the path is first the 'safety and regs' test then... whichever of three separate licenses in any order... correct?

This sounds like a great and simple solution... mmmm... now what are we missing... (can't be that easy...)

The idea of mode-specific licenses should not be tossed aside
lightly. It should be hurled aside with great force!

Key to the notion of *amateur* radio is the tendency to tinker,
experiment, and try different (dare I say "sometimes new") things.

Under the idea of "you can't use a mode until you've passed a
test on that mode" amateur radio would immediately be frozen
in place with no possibility of "advancement of the radio art".

Ya missed the implementation quagmire. How would that be done? Cancel
all existing liceses via one mechanisn or another and everybody has
the take the new tests? That woukld raise a few hackles. Or freeze all
exising licenses and only impose the new regime on newbies? Which
means that it would take a half century or more to fully implement.

Especially since the two most popular ham modes are more than
50 years old.

I can't help but believe the use of unencrypted radio communications would be about the bottom of the list of choices for this. Using a hidden spred-spectrum might make more sense, except that if it IS detected, you know who will be really watching - and not running in to make a bust over an unlicensed radio. Consider the drug problem in this country. Sure, many get busted - but can you honestly believe that anyone gets busted the FIRST time they ever buy or sell drugs? I remember about 9 years ago a kid (oh, maybe about 20 years old) got busted selling 10 pounds of marijuana to an undercover cop in HIS EMPLOYERS parking lot! Oh gee, Your Honor, I've never done this before. Sure. The terrorists strike but once. If it is a suicide mission, you'll never get them. If it isn't, they disappear back to some foreign country. One possibility is the use of a pager. A lot of people have them. Certain calling numbers (rather, the numeric message sent to the pager) could be looked up against a key. One finishes his aircraft training and dials a pager and enters a telephone number. This number may actually mean 'I finished my training'. Someone calls his pager and the number means 'acknowleged'. Once something starts, the key is destroyed and off they go. This may not be what has happened, but it makes much more sense than using a radio that anyone can listen to.

That makes no sense whatever. The Affirmative Action program led to quotas based on reducing standards for Civil Service exams, college entrance exams and the like. How is someone who can't pass such an exam without reducing standards better qualified than one who can pass the exam at the higher standard?

The pendulum swung the "other way" because qualified people were being discriminated against.

Chevettes and Volvos are both cars too. The current reduction in morse testing standards for HF access more closely resembles Affirmative Action than your Chevette scenario. You, my backwoods philosopher, still have it backwards.

Sometimes you wonder if the Texans didn't think so, too. The Alamo has been cleaned up a lot of recent years but the small memorial to San Jacinto is in the middle of the biggest toxic waste area this side of New Jersey.

It would be easier to make short, encrypted transmissions from
unlicensed stations. Why bother to get a license when you don't need
one? You're a terrorist after all, with no compunction to follow the
rules.

they
> stand on it.
>

Yeah, that's true. CW doesn't seem to be a major concern for the majority
of hams. I think for the most part, the hobby is just that--a hobby.

>
> Your proposal to test a packet setup singles out a mode, too.
>

I will challenge that only with the statement that I didn't intend to have
the "mode" tested. The testing objective would be to grade one's ability to
understand how to put things together to make them work. It could be a
packet station, APRS tracker, PSK, etc.

Only in terms of using the mode. It does nothing to prove a darned thing
amateur related other than the knowledge of the language of CW.

>

>
> Neither do the current written tests.
>

Ewww-boy. Don't even get me going on that. I wholeheartedly agree. One of my most emotional responses to the CW debate is if the people who want to use CW skill as a measurement of someone's genuine interest in the hobby of ham radio--spend as much energy changing what we can about the current written tests! What a joke.

> >
> >If a "construction" project of some sort were to be brought into the testing
> >arena, it at least proves that the ham is aware of FCC specifications,
> >rules, regulations, and guidelines.
>
> How?
>

Because the pass/fail score would be based on if the transmitting is within regulatory constraints; if the test provides for the building of an antenna that will transmit cleanly between a couple of bands--then the design would have to based on things like will a tuner be used, will it be a long-wire, inverted, etc. Not only would the project have to be built, it would have to be explained why it would work. Or, have the FCC exam present on paper a scenario with an embedded problem and the test is a full disclosure of what to do to resolve the problem.

>
> >While it is not required that I build

>

Heh heh. Maybe that should be clue number one to you. I can guarantee you that you are far more "into" the hobby than I am. While I am not saying *you* are like this, many believe people like me should not be in the hobby. People like me don't see the above as "simple tests" :).

heh heh. Appreciate the comments and sentiment. However, one correction.
Larry cannot "subject" me to anything. That's what he has never understood.
I read his comments--*IF* (big if intended) I happen to have the time. Most
of the time, I don't. There are two peoples' posts I don't read, and one
person's posts I don't read if they are responses to Len (sorry Steve
Robeson--gotta luv ya): Len Anderson and Larry Roll. I know exactly what
both are going to say, know it is going to drag on and on, and know that
there will be no sense made of any of it by the time I've just wasted all
the time...LOL...so I don't bother.

That is not what happened in my home town. What Affirmative Action
did was put legal teeth into the Civil Rights laws. Otherwise, black
people, no matter how well qualified would only have ever been hired
as servants and lawn mowers. The white power structure was determined
to keep them in their "place".

> Please produce the post in which I accuse you of racism.

You didn't accuse me of racism. You accused me of wanting to hire
unqualified people. That was a lie.

> You, my backwoods philosopher, still have it backwards.

Why are you afraid for Morse code to stand on its merits
without a social engineering program from the feds?

You want minorities to stand on their own merits without
a social engineering from the feds. Why not Morse code?

You obviously don't understand how newsgroups work, Krell. Since I'm not obligated to respond to anything you write, I respond to what I want to respond to and ignore the rest. However, your message is still there for all the read, regardless of what I quoted.

> You remind me of those loudmouths in

For example, I could have just ignored this because quite obviously you have not been shouted down (again, what you said is there for all to read). With that in mind, this part of your message is nothing but foolish nonsense that adds nothing to the discussion.

Everything you said is probably true. I think the FCC was perhaps "sensitive" of the fact that some operators might not want to have a "TIT" callsign (or some other callsign with a meaning outside radio). But, at the same time, I'm sure they also thought a callsign is a callsign, and they had no desire to caught up in endlessly changing callsigns every time a person objected. And you can be sure they've had objections over the years (you gave me an "ATT" callsign and I don't like that phone company, or whatever). In the end, they solved the whole problem with the vanity callsign system.

It's a balance, Kim. I have no problem with police officers at football games, grocery stores, shopping centers, and so forth (they've always been there - that's what we pay them for). But I don't think the National Guard has any business being in those places (they have no training in law enforcement). And I have no desire to have myself, or my belongings, searched when I walk into a mall, grocery store, or public event. At airports, I again have no problem police officers. And I'm even willing to have National Guard personnel at the airports as long as they act like security guards and leave the law enforcement to the people who are trained to do it.

> But, leave out phone/wire tapping,
> and *any* mechanism that impinges on

> country (snip)

And I certainly agree with this. I do not want to live my life with government employees watching my every move - listening to my phone calls, watching my bank transactions, video cameras on street corners, and so forth.

So the Affirmative Action as set up in your home town is different than
that set up in other towns in America?

Hello Rich,

Yeah, that's a better explanation. Everybody would take the common
"safety/basic theory/general regs" test, which covers everything that is common
to all modes. The mode-specific stuff resides in the mode-specific tests.

Hams could hold more than one license "class". It could be like an endorsement
system - a license would say "TDP" or "TP" or "P" or whatever.
>
>This sounds like a great and simple solution... mmmm... now what are we
>missing... (can't be that easy...)
>
Main trouble is the complete overhaul of how we and the FCC think about
licensing. Also, some parts of some bands are not worldwide amateur, si simply
dividing them into 3 parts gets complicated. 40 meters, for example, is
7000-7300 kHz in ITU Region 2 but only 7000-7100 in the rest of the world.

But overall I think it's doable.

It's true, I think, that police officers have "always been there." However, I hav never experienced a police officer as commonly as I do today (post 9-11). I also don't think that bags, purses, etc., are routinely searched as such places, are they? I don't know becuase I don't go to the airport, sports games, fairs, etc. *And* I am about to go to the mall for the first time since 9-11 today (hate shopping at malls but have to today). I'll see there if anything seems different than normal. It's hard to define and be familiar with normal when I only go to places like that maybe twice a year...LOL

>
> But I don't
> think the National Guard has any business being in those places (they
> have no training in law enforcement).
>

Hmmm, on that one I'd have to disagree. The National Guard have experience for "escalated" law enforcement conditions--which is their intended primary purpose (unless that's changed over the past years). It is my understanding that the National Guard are for heightened law enforcement required during times of disaster, emergency, etc. I like the National Guard at airports, and nearly any other public place--though I think it's much more "professional(?)" to have plain-clothed armed persons at places, say, like

malls, sports arenas, etc. The only reason I think that is I imagine that when people go to places like that, it is to "get away" and escape from reality for a while. Seeing an armed guardsmen is, I am sure, quite startling. I know it's a silly idea to have plain-clothed armed persons at the level of the National Guard--but it would be less alarming and more relaxing to go to a sports game without having to confront the scene of a camouflage suit with a rifle butt.

>
> And I have no desire to have
> myself, or my belongings, searched when I walk into a mall, grocery
> store, or public event.
>

Well, neither do I, I assure you. *However* I am willing to "concede" under current circumstances that the needs of the many outweigh the needs of the few (love Spock) in places like airports and areas where my actions (traveling on an airplane for example) put me out of control to keep harm from happening to potentially thousands of people (a suicide nitwit could simply choose to cause a plane to "land" in a very populated area--doesn't even need those tall buildings). Think about potential damage that could be done if I looked down on NYC, San Francisco, Hong Kong, etc., and just "picked" a nice, tightly cloistered, group of buildings to force the plane to descend upon.

>
> At airports, I again have no problem police
> officers. And I'm even willing to have National Guard personnel at the
> airports as long as they act like security guards and leave the law

I wasn't aware that the National Guardsmen are doing anything but patrolling the airports. What are they doing besides that? I don't have a problem with National Guardsmen, say, even going through bags and luggage. Isn't it kind of their duty and charge to even check IDs randomly as people walk by? I don't know if they *are* doing that--but I don't think it would concern me if they did. Now, if they walked up and said they were going to have to arrest me because I just put a cigarette out the wrong way, or ticket me for parking in the wrong area--I'd have a problem with that. That *is* for local enforcement and my federal tax dollars are not paying for "cops" trained at the level of National Guard to patrol for traffic violations. It would be a misappropriation of funds, and of resources, in my opinion.

DITTO. And, I don't want government doing any of that *any* time--war or no war. (It's never--that I know of--been done before even in a time of war and I don't think that needs to change now).

I originally pointed out that some people do research, and tehy only use that which supports their own agendas. They ignore anything to the contrary. How is that foolish nonsense that adds nothing to the discussion?

Nope..CAM got it right. The elimination of a requirement that
can not be justified is nothing like affirmative action because
the reason for eliminating the requirment is simply that it should
not be tested for anymore. Not because there is a desire to
attract any under epresented class of people, but rather because
it can't be justified. The same could be said for SOME changes
in requirements under affirmative action. There were, in fact,
some jobs that had artificially high requirements where some
of those requirements had no bearing at all on the ability
of an individual to do the job,

I always thought the model for retaining the code-testing
requirement in amateur radio licensing was more akin to
the labor union practice of 'featherbedding'. In both
cases, the current employees, or practitioners, get a
governmental agency to legislatively protect certain
inefficient job practices because it preserves the power
bases of those involved. A classic example of this was
the federal requirement for a fireman on all railroad trains,
even those powered by diesel-electric locomotives.
In the case of amateur radio, it was a reaction against
increasing radiotelephone operation back in the 1930's.

I definitely "get it" when you're talking about such horribly misused
government programs such as Affirmative Action. AA is nothing more
than a transfer of discrimination from one group to another, without
doing anything to eliminate the underlying problems it was created to
solve. The only way to put an end to discrimination, once and for all,
is for us to finally accept the fact that *all* Americans are true equals.
I just hope I live to see the day!

A poor example. Driving a ten thousand ton train almost two miles long is not anything like driving a car or truck.

Many of the early diesel-electric locomotives required a fireman to operate them. They were also relatively unreliable and quirky to operate. As the technology advanced, the fireman requirement was eliminated.

It was only "featherbedding" to some of those who didn't actually have to do it.

And nobody twisted your words, Krell. You said you had not read the book and then speculated on the character of it's contents. In response, without commenting on your speculation, I simply suggested you read the book (which would provide you with the answer to your speculation). So which of your words were twisted?

> I originally pointed out that some
> people do research, and tehy only use
> that which supports their own agendas.
> They ignore anything to the contrary.

And I ignored that comment. In other words, I didn't agree or disagree. I simply let your comments stand without response. Why would you be upset about that? Do you expect all of us to publicly state whether agree or disagree with each sentence you write in this newsgroup? I certainly hope not, because it's not going to happen.

Anyway, none of this is adding anything to anything, so I'll let it drop at this point. Take care, Krell.

It's true they've stepped up their presence at the mall (and so forth), but I don't really have a problem with that. And, no, they haven't started searching belongings yet, but some Senator was urging that on a talk show a few weeks ago (so I mentioned it). However, so far, I haven't seen any move to actually do it (thankfully).

> during times of disaster, emergency,
> etc. (snip)

They do receive some training for enforcement during conditions of Martial Law. Otherwise, during emergency deployments (disasters), they are trained to leave law enforcement to civilian law enforcement agencies. In other words, they are trained to just observe and call when they see something out of the ordinary. In fact, they're specifically instructed to not get directly involved because they're not armed (they carry empty weapons), which could lead to a bad situation for themselves if they actually did run into a crime. And, without extensive training, I'd like to see that balance remain. Sadly, some people are urging their expanded use for routine law enforcement (in effect, a new federal police force).

> Well, neither do I, I assure you.
> *However* I am willing to "concede"
> under current circumstances that

> the needs of the many outweigh the

However, an equal theme in that particular movie, and in the following one, was that the needs of the many cannot override the needs of the one - the needs of the one are equally important (it's the concept behind our individual rights in the Constitution).

> in places like airports and areas
> where my actions (traveling on an

> control to (snip)

I think we've already agreed on that.

> I wasn't aware that the National
> Guardsmen are doing anything but
> patrolling the airports. What are
> they doing besides that? (snip)

As stated above, nothing so far. There is only talk about that so far, but that was enough for me to add it in.

> I don't have a problem with
> National Guardsmen, say, even
> going through bags and luggage.

That I would strongly disagree with. Based on the relatively recent experiences I've had, I simply wouldn't trust the kids in today's military with my personal belongings. I know that sounds horrible, but I've been around the military for most of my life (dependent, active duty, civilian employee, and civilian contractor), and I've never seen the crime problems like they have to today's military.

> DITTO. And, I don't want
> government doing any of that
> *any* time--war or no war. (It's
> never--that I know of--been done
> before even in a time of war and
> I don't think that needs to
> change now).

Not so far (that I'm aware of also). During WWW II, phones were relatively rare so the government paid little attention to them. Plus phone lines were less centralized, so it was much harder to monitor anyway. During more recent incidents, the U.S. itself was never directly involved.

However, they've been monitoring international calls for many years (computerized "key" word monitoring). In fact, if you're overseas and call the U.S., you can experience this for yourself. During your call, simply mention a word you think the government might be interested in (the name of a current conflict, a branch of the military, the

president's name, or whatever) and often you'll immediately hear the clicks in the background as the various switching and monitoring devices kick in. What is equally interesting is that you don't hear the same clicks when placing a call from here to an overseas location. I guess they've figured out a way to filter the noise here, but not on all overseas phone systems.

Believe it or not, it seems to me that most US Citizens are pretty tired of
all the "security" issues and it is has always been the media and government
that almost seem to take peace in proliferating a fear response in people.

And, I agree with the corresponding philosophy. That is why individual
decisions that may have an impact on many need to be made with as much
caution as possible. I don't consider it much sacrifice for policing action
to be taking place in public places--because *I* can personally choose
whether I wish to conform to the particular policies at public places.

Oh, OK. Say, for instance the National-Guard-at-airports idea stayed with
us now from here on. I wouldn't mind at all having one or two guardsmen at
each security scanning station. I also think that the guardsmen should be
behind bullet proof glass (small guard shacks) at airports. I think that
sight is far more imposing than "just a soldier."

Well, I can certainly agree with you on your assessment of crime in the
military. I have "heard" such stories from friends, etc. And, I have even
seen some soldiers whom I cannot believe this Nation might have to rely on
for safety. However, all kidding aside, they are all we got. I think I'd
feel the same way about *anyone* going through my things: whether they'd be
careful, steal, etc.

Well, as disgruntled as you may be about this--remember that I am a former
peacenik activist. Your observations of above don't surprise (and the

reason you don't hear them from this side going in is because it has not been allowed until now--I think now it is allowed). At any rate, I have friends who have traveled to places like Central America and had *PRINTED MATERIALS* they have not been allowed to bring back. I mean things like books, journals, etc.!!! They got to the Honduras border where all was confiscated. Some of this stuff was from the church--but were theological books on things such as liberation theology, etc.--and were *not allowed* to be brought back here.

Jim:

I'll have to jump on the Brakob Bandwagon and say that this idea
should be shot from a cannon into a solid concrete block wall. For
one thing, the FCC wants to simplify the amateur licensing process --
not triple it's complexity. It'll never fly with the Feds.

Bob:

Hey, it's not Cecil's fault if he managed to outlive the 20 WPM code
testing requirement for Extra. At least he took full advantage of
TBD and got his Extra; I know a lot of no-code Techs who are still
there, and will never progress to General or Extra because of the *5*
WPM code test! They are now consigned to wait for TEBD (The Even
Bigger Dumbdown). But, as long as they aren't carrying 210 lbs of
fat on a 5' 5" frame, they might even be around for that!

>Never had the time to learn 20wpm. Appears the FCC decided it wasn't
>worth my time either.

That's funny. I didn't "learn" 20 WPM, I just got there by making QSO's
at 5 WPM, then 6 WPM, then 10 WPM, etc. until I eventually, and in
very little time, naturally got up to 20 WPM. In fact, I passed the 20 WPM
code test at a time when I thought I was only ready for 13. Makes me
wonder just how many hams have gone around, resenting Extra-class
hams and whining about the 20 WPM code test, when they were
perfectly capable of passing same all along? From my very first day as
a licensed radio amateur, I never had any doubt that I'd get my Extra.

I recall having to answer a lot of questions about repeaters when I
took my written exams for Tech, General, Advanced, and Extra. I
also had to answer a lot of questions about SSB, RTTY, and FM.
Why were these modes being "singled out?" All the code tests I
took proved was my basic ability to copy Morse code at a certain
speed. There was never any more expectation that I would use
CW than there was that I would use FM, RTTY, SSTV, SSB, or any
other mode that was "singled out" in the testing. However, without
the code tests, I never would have been able to use the Morse/CW
mode, a mode which has produced over 85% of my HF operating
achievements, and 99.999% of my overall enjoyment of ham radio.
The difference is, once I lost my childish, self-serving objections to
code testing -- based mainly on an immature fear of failure -- I saw
the code tests as just as useful and necessary as the testing on
any other mode. It's all about having the right attutude.

>To leave CW as a testing phase of licensing does not prove (or disprove in
>the case of failure) one's aptitude for anything related to ham radio--other
>than CW use.

That's exactly right. However, most hams who give it a proper try, with
the right attitude, succeed anyway -- in spite of their objections and
fears.

>It does not prove credibility in the area of operation,
>ability to properly operate, or anything to do with safety.

Now, except for the safety part, you'd be wrong. Code testing *does*
reinforce good operating technique, because you are tested in exactly
the same way you operate in CW and a variety of other modes.

>If a "construction" project of some sort were to be brought into the testing
>arena, it at least proves that the ham is aware of FCC specifications,
>rules, regulations, and guidelines.

How so? I was able to cobble together a lot of functional "homebrew"
radio projects long before I studied any specific FCC regulations. I dare
say any other experienced ham could say the same thing. However,
I still like the idea of a construction project being part of the licensing
process, if for no other reason, it results in the prospective licensee

learning some very practical, basic electronic theory.

>While it is not required that I build
>anything once I am a ham--a successful building project that meets
>specifications of the FCC will assure the FCC--and *should* assure
>hams--that the new licensee at least knows something about the R&R.

Just exactly which "R&R's" is a ham "learning" by building a simple regen receiver or one-chip, crystal-controlled transmitter? I can do both without knowing a damn thing about the R&R's other than which frequencies the devices I build need to operate on -- and that's something that even the most technically-uninvolved appliance operator needs to know!

>PLUS I think getting rid of CW testing without something to take its place
>will really piss off a bunch of people.

I don't think so, Kim. Eliminating code testing, and replacing it with a practical demonstration of technical knowledge wouldn't necessarily "piss" me off. The simple fact is, that the best projects for such a test would be simple CW transmitters/receivers. And what would a ham so tested need to know to use his creations on-the-air? You guessed it -- the Morse code!

>I'm willing to have CW testing
>ousted, and feel that a building project is a more favorable way to "test"
>one's commitment to ham radio.

Fine. Shall we co-author a Petition for Rule Making to the FCC?

>Hence, I would be out--because I truly just
>want to know the R&R, buy what I need to operate, aren't the slightest bit
>interested in why things work, and so would not really expend the effort to
>build anything for a license, either.

Ooops, sorry -- in other words, you're just another typical dumbed-down wanna-be ham. Never mind.

>CW, to me, was a piece of cake
>compared to having to learn anything related to getting RF power from Point
>A to Point B without blowing anything up.

Yeah, you managed to master that mean 'ole 5 WPM code test. But what I'd like to know is -- why haven't you since upgraded to General or Extra, since you're already at the top of the current code-testing heap? Don't tell me, let me guess -- you don't have enough time in your busy schedule to study for those additional written tests! I thought so!

546. The difference between Morse Code and other tested topics

Newsgroup: rec.radio.amateur.policy
Date: 2001-11-11 19:11:52 UTC
From: jason_hsu@my-deja.com
Message-ID: <f7d9a152.0111111111.525af6f5@posting.google.com>
Source record: 23492

Let's focus on JUST ONE aspect of the Morse Code testing controversy. (Remember: The testing requirement is the controversy, not Morse Code itself.)

There is one important difference between Morse Code and other topics tested. I hope I can avoid all the other arguments that have been beaten to death 100 times per day every day. (I apologize if this argument has also been beaten to death. I have only sporadically read this newsgroup.)

ONLY Morse Code has UNILATERAL pass/fail power under the current system of licensing HF operators. If you are completely ignorant about antennas and feedlines, you can still pass your written exams if you answer enough of the other questions correctly to earn a passing grade. For example, the Amateur Extra exam has 5 questions on this topic. If you only answer one question correctly (due to sheer blind luck), you can still pass if you answer 36 of the remaining 45 questions correctly. The same applies for other sub-topics like receiver components, band privileges, operating practices, propagation, emergency communications, test equipment, and other areas.

On the other hand, one MUST pass the Morse Code exam in order to upgrade to General and Amateur Extra, regardless of one's knowledge of other topics or performance on the written exams. Thus, Morse Code has the unilateral pass/fail power that NO other topic has.

QUESTION: Does Morse Code testing deserve its unilateral pass/fail authority that no other topic has? If so, why?

> full privileges on their respective segments. The tests for these
> endorsements would be specific to those modes.

The notion of a "Basic" amateur radio license with "endorsements" after passing tests for various modes is, IMNSHO, a really bad idea.

After all is said and done, the one underlying difference between the amateur radio service and the other personal radio services (CB, FRS, etc.) is the fact that we are licensed to build our own station and put it on the air. We alone are licensed to build a 1.5KW transmitter and put it on the air, without any "inspection" of that transmitter by the FCC before we stroke up on our favorite band.

This "permission to experiment", unique to our hobby both in the equipment *and* the modes we use, is what sets us apart. Restricting our operation and experimentation to only those modes or equipment types we have 'endorsements' for, such as is done in aviation for example, would be the end of the Amateur Radio Service.

Since we couldn't tinker with anything new until we had studied and tested for the endorsement, experimentation and tinkering would come to an immediate halt. There is little enough of it now, and the idea of qualifying for endorsements before we could tinker with a new mode or technology would end experimentation within the framework of amateur radio for all time.

The only legimimate function of testing in the context of amateur radio licensing is to ensure that the licensee has a basic familiarity of technical concepts, such that they can ensure that their experimenting and operation does not trash the electromatic spectrum for other users, and that they stay within the bands allocated to them.

I firmly believe that the amateur rules ought be simplified to:

97.1 To get an Amateur Radio license, you are required to pass a technical test to show that you understand how to build simple equipment which meets spectral purity specifications of (.....blah, blah, blah). You will be issued a license and callsign when you

pass the test. Transmit your call sign once every 10 minutes when on the air.

97.2 Your power limit is 1.5KW to the antenna.

97.3 Here are your bands. Stay inside of them.

97.4 Your are encouraged to tinker and experiment and communicate and do public service and talk to strangers in far away lands and launch communications satellites into space and any other cool technical "radio stuff" you may think up. The government doesn't care what mode you use for any of this. (See 97.3)

97.5 Play nice. We'll try to keep the CBers out of your hair. Deliberate interference, unresolved dirty signals, or other asinine behavior on your part will cause Riley Hollingsworth to come and permanently kick your ass off the playground. Have fun.

Love always,
/signed/ FCC

Ever notice that there are two CW subbands nocode hams can
operate on? There's 50.0 to 50.1, and 144.0 to 144.1

Also, maybe a way of making CW practice more fun is to
gather everyone in the same room, give everyone a code
practice osc and key, and pretend that you're all on the
air on the same frequency all trying to operate some rare
DX (ie, pileup). Or do a kind of WAS CW net, like those
the Century net does on 3905 SSB. Each operator is told
that he is in suchandsuch state, etc.

Cheap shot, Larry or at the very least a swivel gun on a sitting duck.

In this part of the planet, no one does 30 so the issue is moot. As far as cemetaries, these have been being done thru black churches for eons; the church may own a cemetary and provide its membership with a decent burial regardless of what are likely to be trying financial circumstances. Part of the Baptist tradition that the SBC long since forgot. Incidentally, the grave sites of my parents when the day comes border on a block owned by a local black church for precisely that reason. Take me when I'm gone to Forest Lawn.

There is also the matter of the funeral trade, perhaps the last bastion of racial, financial, and religious segregation in the old U. S. of A.

I live in the local version of the U.N. General Assembly although our Muslim population has declined. Damn, I really liked Uzbek rice pilaf. With the Latino invasion of the Omaha area we now have a pretty good representation. It is fun to polka with a 70+ year-old black lady to Mexican music on the lawn. Fakes the living daylites out of the Latinos but they are a fun-loving bunch; perhaps soon we can teach them to polka to Who Stole the Kishka if it doesn't snow. The prospect of a yard party featuring Frankie Yankovich and the Yanks (no relation to Wierd Al) and the Six Fat Dutchmen is almost too delicious to contemplate. Diversity is like being a grandpa, enjoy it then send them home.

Mad Richard's Immigration Policy: if they can cook, let 'em in. When I lived in WI, I regularly ate at an Albanian place (one of four in a very small SMSA) and miss it terribly. The Macedonian who ran the place swore that the Albanians taught the Greeks who taught the Italians who taught the French to cook. Might have been believable if the cook hadn't been named Jose. One of the major downers of living in the mid-Continent is that it is the land of the bland; vegetables consist of steam table peas, corn, carrots, and mixtures thereof cooked to oblivion. Anyone who can produce a decent steamed cauliflower should be granted immediate citizenship and kissed on all four cheeks by the INS.

Given the level of road maintenance in the poorer ends of town, and for that matter the total lack of hill-leveling when the roads were built, I strongly doubt anyone but the terminally fearful actually speed up in these neighborhoods. Nothing in the world like blasting down a brick street on a major incline in a B-350 trying like hell to hold it under 45.

Well, I have no idea how a lot of my equipment works, but I know how a much more basic pile o' electronics doing a small subset of their functions would work. Does that count?

If I take the cover off my D7A, I can't even make a guess at what some parts are for, but give me a sufficiently well-stocked junk box, and I should be able to assemble a rudimentary FM receiver, maybe even a TNC. OTOH, I haven't been able to find a good explanation of what AIP actually is, let alone how to implement it. (If anyone can point me to a worthwhile description of how it works, please do. The manuals are decidedly vague, and I can't find anything better on the web) I just know it helps cut down on the intermod. Most of the features, beyond turning RF into audio and vice versa, are beyond my current knowledge.

Am I an appliance operator, a 'real ham,' or some strange, undefined creature in between?

> When faced with insults and dreision,

You face me with dreision, buddy, and I'll have to figure out what the hell it is so I'll know what to do about it.

How about just handing them the appropriate test equipment, then
turning them loose in a half-dozen or so stations (assembled specially
for the test, of course) and telling them to find the ones which:
a) violate the regs
b) are improperly set up with regard to normal operating practices
(i.e. antenna on entirely wrong band for the rig, FM rig and
horizontally polarized antenna, etc)
c) should, theoretically work best for their stated purpose

> anything like driving a car or truck.

> Many of the early diesel-electric locomotives required a fireman to operate
> them. They were also relatively unreliable and quirky to operate. As the
> technology advanced, the fireman requirement was eliminated.

Well, it *was* a while ago, so my memory of this isn't perfect. And it
wasn't quite cut and dried. My recollection is that the 'firemen' couldn't
be reclassified as 'assistant engineers' or 'crewmen' because this would
have gutted the firemen's union of membership. So a real knock-down,
drag-out labor dispute ensued that threatened to shut down the nation's
railway system.

My point was that union power and federal regulations conspired to
maintain a status quo that prevented railroad management from crafting
a more modern, cost-effective... and safe... working system.

> It was only "featherbedding" to some of those who didn't actually
> have to do it.

Like a lot of other terms that came out of the labor disputes
of the twentieth century (yellow-dog contract, scab, goon),
it is a term we are stuck with to describe a certain set of
circumstances.

The Armenian judges gave this a 9.8 on the Olympic Troll-O-Meter, but
they were over-ruled by the umpires in instant replay, who award it a
1.4.

The Armenian judges lodged a formal protest!

It was sufficiently trollish, of course, but way too obvious.
It was poorly written, poorly executed, and was so incredibly
lame as to lack the true drawing power of a really masterful
troll. Maybe as high as a 1.6 for the intense stupidity of the
premise, but a 9.8? Never! The Armenian judges tear their
hair out, throw their balalaikas down in dismay, and perform
the traditional Armenian Dismay Chant! They demand a recount!

> That was not an unarmed rifle
> that killed!!!

True. However, if I remember correctly, I believe Kent State was declared a martial law situation (civil unrest) by the governor. Anyway, it is exactly because of that incident (and a similar, but less well known, incident in Florida) Guard members don't carry loaded weapons in similar situations today. Of course, I haven't been to the local airport recently, so I don't know if the Guard personnel there now are carrying ammo. The WTC attack was an unusual incident, so that may have led to a change in that policy.

> Oh, OK. Say, for instance the

> glass (small guard shacks) at
> airports. I think that sight
> is far more imposing than "just
> a soldier."

I suppose that makes sense at larger, international airports, but let's look at the other extreme. At the small airport here, with it's no international flights and only two or three flights coming in from around the country each day, it does seems a little silly to have 65 (yes, I heard it on a recent news broadcast) National Guard personnel sitting around that airport 24 hrs a day collecting full active duty pay. Remember, this is in addition to the airport's own security personnal and the local law enforcement personnel that routinely patrol the airport. To me, that seems to be some mighty expensive window dressing just to make people feel better.

Well, I'm going to cut this short, Kim. Since my news server is down again, I'm posting this from Google.com (which I find very distractingly unfamiliar).

Cecil:

Incorrect. The Affirmative Action program was instituted in order for
liberal Democrat politicians to be able to cement the votes of the
minority population, primarily blacks. Just another wagon on the
political gravy train, intended to keep certain groups of people
dependent on big government and keep Democrats in power forever.

The usual Moorecrap about the Morse Code being a "creed" snipped
to prevent further stinking up of the newsgroup.

of the NCTA.

>If you are completely ignorant about antennas and feedlines,

You should not get a ham license, either -- but, unfortunately, the written
tests are not structured that way. Were I in charge, they would be!

SNIP

>On the other hand, one MUST pass the Morse Code exam in order to
>upgrade to General and Amateur Extra, regardless of one's knowledge of
>other topics or performance on the written exams. Thus, Morse Code
>has the unilateral pass/fail power that NO other topic has.

Precisely. And this is one thing I would NEVER change.

>QUESTION: Does Morse Code testing deserve its unilateral pass/fail
>authority that no other topic has?

Yes, it does.

>If so, why?

Because the Morse/CW mode is the most uniquely practical, effective,
efficient, and universal communications modes available to radio
amateurs -- and this mode has many unique functional characterists which
cannot be exploited without operators trained in the use of the Morse Code.
History has proven that it is code *testing* which ultimately results in the
vast majority of code *usage* on the amateur bands. Without the testing, the
ability
to exploit the many benefits and advantages of this mode will eventually be
lost within the ARS. Therefore, this mode deserves special consideration in
the
license testing process. And a mere 5 WPM doesn't cut it. A minimum of a 12
WPM code test should be required for full amateur HF operating privileges.

All "firemen" today have qualified as "engineers" and the position
is now "assistant engineer". Regardless of seniority, the two trade
off as to who "drives" the train and who is the "assistant" for any
specififc run. Certain runs such as the Capitol Corridor passenger
runs in California now operate with a single cab engineer.

>My point was that union power and federal regulations conspired to

Interesting to note that last week the Brotherhood of Locomotive
Engineers and the United Transportation Union combined as a single
union that now includes all train and engine crew titles.

Actually, I was referring to thr fact that these tranmissions are coming in uninvited and we can't seem to turn them off.
My question really involved figuring out who is transmitting them on the ham radio, and if they are obligated to do something so the tranmissions are not heard, or if it is our obligation to buy some sort of equipment that will filter them out for us.

The answer is...it depends.

First - Are you positive as to the person being a ham? Do you
have the person's call sign (e.g. could be like K2UNK, WN4C,
KB6XYZ, etc.)

Second - IF you have a call sign, you can look it up on
a database published by the FCC.

Third - IF you have a valid identity, the ham, if you
contact his/her could have a technical problem with his
or her station equipment....however....

Fourth - It may well be the case that the consumer equipment
you have is not tolerant of certain legal signal conditions and
the ham is operating within allowed legal operation.

Did the "problem" start suddenly? Recently?

Anyway, just some info to help you.

Cheers,
Bill K2UNK

Walking is a universal and efficient form of transportation, but one doesn't have to prove they can walk in order to get a driver's license. Nor should one have to show high-speed code skills in order to use a microphone.

> amateurs -- and this mode has many unique functional characterists which

Larry, I will point out that Morse - up until the downgrading of everything to 5 WPM - did not necessarily have that total effect either. If you failed the 20 WPM test, you might well have still upgraded to advanced (or general). At 5 WPM, you either know the code or don't. Slowing to 1 WPM won't help at this point (unless during that 1 minute they happen not to hit one of the many letters or numbers someone doesn't know). Then again, I wouldn't know the difference between an E and a T at that speed. Kinda like measuring a 1/100 Hz signal with a counter with 1 second max timebase.

In general the ham radio community would like to avoid annoying
neighbors. What you may be having is called RFI (radio frequency
interference). A local RFI committee (a branch of the ARRL,
a national ham radio club) may be able to help. Look at
http://www.arrl.org
Odds are it's your equipment not successfully ignoring
legal ham radio transmissions. The ham doesn't *have*
to fix it, but odds are, with the RFI committee, would
want to fix it so you don't have the problem.

Jim:

Considering all the stuff on a diesel-electric locomotive that could possibly catch fire (2200 gal. of diesel fuel, and wiring carrying 4700 amps of current, among others), one would think that having a fireman aboard wouldn't be such a bad idea! (Naturally, I'm talking about the type of "fireman" that puts fires out, not ignites and feeds them, as on a steam locomotive!)

Typical no-coder response: Compare the Morse code testing requirements
to something with no comparable characteristics; i.e. driver's licensing
requirements. However, I'm sure you've seen this argument used
before, and re-using a stale, old, useless argument is a lot easier than
coming up with something original. And, *ease* is what this is all about,
from your point-of-view.

>Most of the hams I know were just damn glad to get the test out of the way
>so that they'd never have to listen to so much as another "dit" again.

Of this, I have absolutely no doubt. As stated above, it is a lot easier,
less challenging both mentally and physically, to pick up a microphone
and talk, than it is to learn a useful communications skill.

> True. However, if I remember correctly, I believe Kent State was
>declared a martial law situation (civil unrest) by the governor.

Yours truly has special insight to KSU and the events of May 4th, 1970.

Several of the "protesters" encouraged the crowd to disregard the Riot Act warning read to them by a KSU police sergeant and told them the Guard's weapons were not loaded.

Please notice that none of the figures of the "leadership" of the protesters was hit. They were not only NOT at the front of the crowd, they weren'a anywhere near the events themselves.

Thier sole purpose at KSU was to create a riot situation and incite the crowd to unrest, however unmotivated they may have initially been.

It succeeded. Unfortunately for them, the NatGuard had just come off the Independent Truckers strike and they were tired...TOO tired to put up with a bunch of snot nosed kids loking to enliven thier week by destroying brand new dorms and libraries. AND....they were armed.

>Anyway, it is exactly because of that incident (and a similar, but
>less well known, incident in Florida) Guard members don't carry loaded
>weapons in similar situations today.

Oh?

True, the Guard does train in non-lethal riot control techniques, but you can bet, Sir, that if you see a firearm brandished, it HAS ammunition in it.

>The WTC attack was an unusual incident, so that
>may have led to a change in that policy.

If you see a magazine in the well, it's loaded.

Every electronic device that is capable of either radiating or being interfered with by an RF radiator (intentional or otherwise) usually has a "Part 15" caveat on the back.

Unfortunately most people do not know what this means...In brief, it means your UNlicensed device may be subject to interference from LICENSED services, and that there is no recourse available.

The good thing is that if this problem IS originating from an Amateur Radio operator, he/she will probably be morem than glad to assist you in getting the problem fixed.

Unfortunately, too many people refer to any kind of "errant" electronic interference as "ham" radio in nature. That's as foolish as calling every small airplane you see a "Piper Cub".

You might refer your problem to the American Radio Relay League in Newington, CT. They have an extrememly talented gentleman there who specializes in rectifying this kind of problem. <w1rfi@arrl.org>

Good Luck

I have had a very cordial e-mail QSO with them covering essentially the same ground that has been covered here. The case is a bit more complex than what has shown up here but my best guess is that they have a CBer pumping some AM heat thru an Antron 99 or somesuch. Part of the problem is that there is no antenna in sight.

Good people, be nice.

AMATEUR RADIO NEWSLINE(tm) REPORT #1265 – NOV. 9, 2001

Amateur Radio Newsline report number 1265 with a release date of Friday, November 9th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Ham radio leads the way at the New York City Marathon. This story is first on Amateur Radio Newsline report number 1265 coming your way right now.

(Billboard Cart Here)

**

HAM RADIO AND SPORTS: - THE NEW YORK CITY MARATHON

Ham radio was once again at the start and finish -- and all along the route of this years 32nd running of the New York City Marathon. This years event was held Sunday November 4th and was dedicated to victims of September 11th terrorist attacks. Its theme -- “United We Run.”

The starting line was at the Staten Island Side of the Verrazano Narrows Bridge. According to Stew Seit, WA2JNF, who was assigned there, it was a moment of total patriotism:

--

WA2JNF: “On the bridge waiting for the cannon to go off, everyone began singing patriotic songs. It would brng a tear to your eye. There were 30,000 people singing. It was something to be seen.”
--

But Seit and almost 500 other hams were there to provide communications for the event. And according to WA2JNF, even though there were lots of cellular phones, it was ham radio that was the communications backbone once again:

--
WA2JNF: “Everyone was running around with digital radios, Nextel’s, cellular phones. But when the need came to get the message through they turned to us hams. Regardless of how many cell-phones or trunked radios they have tied around their necks, when the message was of priority nature, and they wanted to make sure it got through, they spoke to one of the hams who was handling the communications and we got the message through”
--

The crowd lining the route was estimated at more than two million. Many were waving small American flags in memory of the thousands killed in the terrorist attacks.

ARRL Hudson Division Vice Director Steve Mendelsohn, W2ML, heads up the the ham radio communications for the Marathon. In fact, he has been organizing the ham radio effort ever since Amateur Radio became a part of the event many years ago. He says that for him, for the group of Amateur Radio volunteer communicators and for the people of the Big Apple, this years New York City Marathon was like none ever before:

--
W2ML: ”It was truly a celebration of life. It was a way of saying to the terrorists: ‘look -- we are going on with our lives. You didn’t stop us. On the contrary, you united us.’ “
--

Tesfaye Jifar of Ethiopia set a record in winning the mens catagory. He ran the 26.2 mile course in 2 hours, 7 minutes, 43 seconds. The old record of 2 hours, 8 minutes and 1 second was set in 1989. And as Jifar broke the record it was a corps of ham radio operators that guided him -- and the 30,000 other competitors in the New York City Marathon -- to a safe completion of this years run.

More on the Marathon is on the web at www.nyrrc.org. Our complete interview with Steve Mendelsohn W2ML can be downloaded from our FTP page by clicking on the newscast number at the top of the www.arnewsline.org home page. (ARNewsline(tm))

**

RADIO AND SPORTS: THE SANTA CLARITA MARATHON

Sunday November 4th also saw another Marathon where ham radio played an important role. This one took place in Amateur Radio Newslines’s own back yard. It was the Santa Clarita 5 K Marathon and featured ham radio as it primary communications. Take a listen:

--
Audio Here
--

About three dozen hams from the Los Angeles County Disaster Communications Service and the Santa Clarita Valley Amateur Radio Club provided this years communications support. Most of it was on two meter F-M using the 146.79 MHz W6JW club repeater.

--
Audio here
--

The Santa Clarita Marathon may take place in a Los Angeles suburb, but it is by no means a small event. Several thousand runners take part and its course is USA Track and Field certified. In fact, this event is a qualifying race for the famed Boston Marathon.

More information on the event is at www.scmarathon.org. The Santa Clarita Amateur Radio club’s home in cyberspace is www.w6jw.org. (ARNewsline(tm))

**

TECHNOLOGY AND RADIO RULES: FCC PUTS KENWOOD "SKY COMMAND" PETITION ON PUBLIC NOTICE

Turning to regulatory matters, the FCC has put a rulemaking petition from Kenwood Communications Corporation requesting that the government relax restrictions on Amateur Radio auxiliary station operation on public notice. Amateur Radio Newsline’s Bruce Tennant K6PZW has the details:

--
The FCC assigned the rulemaking number RM-10313 to the petition in which Kenwood asks the government to permit hams to use control methods like its own Sky Command radio remote system.

According to the ARRL Letter, Kenwood’s Sky Command lets a user control a fixed location High Frequency station using a pair of dual-band VHf/UHF transceivers on frequencies in the 70-cm and 2 meter bands. Kenwood wants a change in Part 97 rules that would expand permission to operate an auxiliary station on all 2-meter frequencies above 144.5 Mhz, except on 145.8 to 146.0 MHz.

And while not mentioning Sky Command by name, Kenwood says that the proposed rule change would allow the development and use by amateurs of new technology devices and increase the utility of the limited amateur allocations. Current FCC rules limit auxiliary operation to certain frequencies above 222.15 MHz.

In July 2000, the FCC declared that use of the Sky Command did not comply with Amateur Service rules--specifically Section 97.201(b). It also declined to grant a waiver make it legal. The ARRL commented in opposition to Kenwood's earlier efforts to have the system eclared to be in compliance, and it refused to permit Sky Command advertisements to be published in its QST magazine.

In its Petition for Rule Making, Kenwood asserts that auxiliary operation is poorly defined and significantly overregulated in the FCC rules. Kenwood also argues that present limitations on auxiliary operation no longer are appropriate in today's amateur environment and should be withdrawn.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW.

--

Again, the Commission has assigned the rulemaking number RM-10313 to the petition from Kenwood. Those interested may view and comment on it via the FCC's Electronic Comment Filing System. (ARRL)

TECHNOLOGY AND RADIO RULES: DIGITAL WIRELINE REMOTE BASE OPERATION BEING TRIED IN THE UK

A British ham radio operator has been granted permission to experiment with a digital wireline multi-band remote-base system. The experimental station was made possible by combining a popular H-F transceiver, the support of the national ham radio society and a cooperative government regulatory agency. Jeramy Boot, G4NJH, reports from Nottingham in the U-K:

--

Dave Gould, G3UEG, has received a Notice of Variation as a Special Research Permit to set up an HF station that is remotely controlled over the telephone network. This has come after 16 months effort liaising with the RSGB Licensing Advisory Committee and the Radiocommunications Agency and has been finally approved after a site inspection. The system is based on a Kachina 505DSP transceiver and Kachina's own specially-designed remote control system. The audio is digitised and then multiplexed with the control signals. The resulting single data stream is encoded and then passed over the telephone network using standard modems. At the remote end the data is decoded and the audio is split from the control signals and passed to the transceiver. The system will operate at a line speed of 28K or better and includes strong security, failsafe and shut-down measures.

Jeramy Boot, G4NJH
--

While we in North America take wireline and radio remote-base operations for granted its new to many other parts of the world. Anyone interested in receiving further information or with ideas to assist Dave Gould, G3UEG, may contact him by e-mail at david.gould@btinternet.com (RSGB)

**

ATTACK ON AMERICA: COMANDO SOLO DOES NOT WANT RECEPTION REPORTS NOW

If you are an SWL or ham who listens to shortwave -- and -- if you are planning to send a confirmation card to Radio Solo, the word right now is -- dont! This as the United States forces 193rd Special Operations Wing asks that reception reports and cassette tapes of its Commando Solo flying radio station broadcasts over Afghanistan not mailed to them at this time.

According to the Media Network e-newsletter there are two reasons. Obviously, they are involved in operations over a theater of war and need to lessen their peripheral workload. Also, due to the Anthrax scare in the United States, the U.S. mail system is overloaded with new safety procedures. In other words, your report may be indefinitely delayed or never opened. (Media Network E-Newsletter)

**

ATTACK ON AMERICA: NYC TELEVISION SEEKS NEW HOME

Seven weeks after a terrorist attack caused the collapse of the World Trade Center, hundreds of thousands of homes in the New York City area remain unable to receive more than four television stations. Because the main antennas atop the north tower came down, all the local stations, except Channels 2 and 41, which had backup antennas on the Empire State Building, had lost a significant part of their audiences. The situation improved last week when two more of the stations that lost their main transmitters began broadcasting from the Empire State Building site. Amateur Radio Newsline's Henry Feinberg has more:

--
On Thursday morninng, October 31st, Tribune-owned WPIX-TV channel 11 switched on a transmitter giving it an over-the-air signal said to be similar to what it was prior to the terrorist attacks. WNBC-TV channel 4 -- which in the late 1940's was the first to broadcast from the Empire site -- made a triumphant return later the same day when it flipped the switch on its new Empire located transmitter.

As an interim step to get back on the air, most local broadcasters had opted to use the old Armstrong Tower located in Alpine New Jersey. But the Alpine tower is not high enough and is to far away from the majority of the New York City demographic audience to provide clear reception throughout the metropolitan region.

The Empire State Building was the home to almost all New York City television broadcasters before the World Trade Center was built. Many broadcasters want to return to it but the New York Times says that Empire has to little space and not enough electrical power to accommodate the demands of all the stations. So a coalition of 11 broadcasters in and around New York are exploring options that include sharing management of a broadcast tower built to their specifications and needs.

The Times says that the long-term situation may be the construction of an enormous stand-alone broadcast tower. One that is perhaps 2,000 feet high and preferably be somewhere near the World Trade Center twin towers site.

But broadcasters will face a large number of issues if they persue the stand alone tower idea. Chief among them are the wants and desires of the residents of New York City. Many of them have made it clear that the area where the twin towers once stood be rebuilt a both a new trade center and also as a lasting monument to those who died in the terrorist attacks of September 11th, 2001.

Not far from the Armostrong Tower in Alpine New Jersey, I'm Henry Feinberg, K2SSQ, reporting for the Amateur Radio Newsline.

--

Aside from the political issues mentioned in Henry's report there will be numerous other technical roadblocks. First is that of protecting the Philadelphia and Boston demographic television markets from interference. And if such a project is approved by the city at a different location, the Federal Aviation Administration will likely demand that it be built where it will avoid established flight patterns for local airports. And there are not very many of those in and around the metro New York City area. (ARNewsline(tm) from various published news reports.)

**

ATTACK ON AMERICA: VERTEX STANDARD / YAESU DONATES GEAR

According to a recent story in the ARRL Letter, Vertex Standard, which manufacturers Yaesu brand gear, has donated several pieces of equipment to Virginia ARES. The manufacturer had arranged to loan an FT-7100 transceiver and three of it's VX-5 hand-held's during the response to assist the Salvation Army at the Pentagon terrorist attack site. When the work concluded, Virginia Section Emergency Coordinator Tom Gregory, N4NW, e-mailed to thank the company and to inquire about returning the equipment. Vertex Standard Executive Vice President Mikio Maruya, WA6F told him that Virginia ARES was welcome to keep it on hand for future emergencies. The Woodbridge, Virginia, Ham Radio Outlet store cooperated in providing the Virginia ARES team with the needed equipment on September 13th. (ARRL)

**

REPEATER COORDINATION NEWS: NFCB AND NFCC ELECTION RESULTS

The National Frequency Coordination Council -- or NFCC -- has elected Nels Harvey, WA9JOB as its new President. Harvey replaces Owen Wormser, K6LEW. Wormser had served as Chairman of the original drafting group that resulted in creation of the NFCC back in mid 1990's and as several terms as President.

Also elected to office are Dave Baughn, K4XI as NFCC Vice President, Dick Isely, W9GIG as Secretary and Clay Freinwald, K7CR as the organizations Treasurer. Meantime, Clay Freinwald, K7CR, and Nels Harvey, WA9JOB, have also been elected for two year terms on the National Frequency Coordinators' Board of Directors. Both ran unopposed. (ARNewsline(tm))

**

REPEATER COORDINATION NEWS: SERA DROPS UNKNOWN CATEGORY

The South Eastern Repeater Association says that it has dropped use of the term 'unknown' for listing repeaters that it has little or no information on. According to the organizations publication Repeater Journal, the listing of about 150 repeaters as 'unknown' was intended to prod their owners to file delinquent updates or help clear the groups records of repeaters that are no longer on the air.

It did neither, but it did cause confusion for ham radio enforcement efforts. This occurred earlier this year when FCC Special Counsel Riley Hollingsworth cited the South Eastern Repeater Association's Unknown Repeater List as grounds for dismissing a complaint against an uncoordinated West Virginia repeater that had been accused of interfering with a coordinated system in Kentucky. The coordination counsel's FCC Liaison is reportedly working with Hollingsworth's office to clear up the confusion. (SERA Repeater Journal)

**

HANDI-HAMS: WINTER RADIO CAMP IN MALIBU IN MARCH 2002

The next Handiham Radio Camp session will take place the first week of March, 2002, at Camp Joan Mier in Malibu, California. That camp will be offering classes in Technician, General, Extra, Operating Skills, and JAWS computing.

There is no tuition charge for West Coast or D-X members aside from the $45 registration and insurance fee. If you want to receive a camp application packet, please e-mail handiham@courage.org or call 1-866-426-3442 -- days -- Central Standard Time. The most current camp information is available on the Handiham website located in cyberspace at www.mtn.org/handiham. (Handihams)

**

INTERNATIONAL – BAHAMAS: FEES GOING UP

The annual fee for those holding a Bahamian Amateur Radio license has increased to $25. According to the ARRL news, The new fee applies for licenses renewed after August 1. The cost to "catch up" on past renewal fees prior to 2002 is $6 per year. Some US amateurs with Bahamian tickets were surprised to get letters requesting the back renewal fees and threatening fines and revocation. According to Dick Long, C6AKE, the Bahamian Public Utilities Commission--which handles licensing there--collects $6 a year for the years your license has been expired--this has always been its policy, he says. If you don't plan to use your license anytime soon, Long advises returning it to the P-U-C or sending a letter stating that you won't be using it again. "If, at some future time, you want to return to the Bahamas, you can always apply for a new license," he added. The P-U-C e-mail address is puc@batelnet.bs. (ARRL)

**

INTERNATIONAL - BELGIUM: A BLESSED EVENT

Hams in Belgium are getting to take part in a truly blessed event. This, as John Devoldere ON4UN who is the President of the Belgian national Amateur Radio society announces that nations radio amateurs can use the special prefix OQ instead of their usual ON or OT prefixes.

According to Devoldere, Belgian telecom authorities issued this special prefix on the occasion of the birth of Princess Elisabeth. The permission to use the OQ prefix began on October 26th, runs until December 31st. (RSGB)

**

INTERNATIONAL - NEW ZEALAND: THE NATIONS HAM-STATS

The New Zealand Ministry of Economic Development reports that as of November 1st that nation has 3,295 General Class license holders, 1717 Limited license class, 24 Limited Novice and 25 Novice class operators. These hams share 205 voice repeaters, 19 television repeaters, 29 digipeters, and 42 beacon operations. Mix in two fixed licenses and the grand total is 5358 licenses issued. (NZART)

**
HAM RADIO IN SPACE: ISS TALKS TO NEW YORK CITY SCHOOL

Ten elementary school students from New York City had some very specific questions about current events for International Space Station Commander Frank Culbertson. To the question, "What did it look like in New York on September 11," Culbertson responded that he could see the smoke rising from the World Trade Center site and drifting south.

--
Culbertson: “On September 11th we happened to be coming over a few hours after the attack and I could see a large column of smoke coming out of the World Trade Center and floating off to the South and a kind of a fog of smoke all over the Southern part of the city.”
--

Culbertson went on to explain that he took pictures of the tragedy from space. He further related that he found out about the event while talking to his doctor during a scheduled medical conference.

Another youngster wanted to know, "What does Afghanistan look like from space?" Culbertson answered that it appeared to be very desolate and rugged.

The questions could be expected. The children are students at P.S. 234, with its regular campus only two blocks from the site of the World Trade Center.

On September 11, all 650 students at the school and their teachers evacuated their building without a single casualty. The school community has stayed together despite the turmoil, and is now housed in temporary quarters elsewhere in Manhattan. Culbertson told the students that he admired them for their courage, and told them to continue to study.

--
Culbertson: “ I want you to know that the whole world is very proud of you. Its to bad that you had to move from school to school, but we are very proud that you are continuing to work and take your education seriously. Things will be alright. Don’t worry.”
--

The students asked a total of twenty questions during the ten-minute contact. Some thirty teachers and parents and reporters were also on hand as were reporters from the New York Post and New York Daily News newspapers.

The ham radio contact was made through the Amateur Radio on the International Space Station project, an international coalition and was carried live by MSNBC on its website. Former NBC science editor and Newsline anchorman Roy Neal, K6DUE, moderated the event. Communication was handled through W6SRJ, a club station at Santa Rosa Community College in California, with Herb Sullivan at the controls.

P.S. 234 has its own website. Its in cyberspace at www.ps234.org/about.html (ARISS via K5YFL)

**

HAM RADIO IN SPACE: AMSAT-OSCAR 40 UPDATE

AMSAT's Peter Guezlow, DB2OS, reports magnetorquing of the OSCAR 40 ham radio satellite is again in progress. Guezlow also says that operational periods for the RUDAK system have been extended recently. This, to allow downloading of several important RUDAK G-P-S files.

AO-40 is currently in a long period during which the Earth eclipses the sun near the satellite's perigee. This actually began about August 28th, and will rapidly increase in length. The eclipses will continue well into June 2002. (AMSAT-NA)

**

SPACE AND SCIENCE: A LOT OF BIRDS UP THERE

SpaceDaily reports a new survey by the Teal Group has identified some 600 active satellites in Earth orbit or in deep space. The survey factored in all satellites launched since 1980, and, after a process of elimination, arrived at an estimate of 600 to 610 for satellites that remain active today. (AMSAT-NA)

**

DX

In D-X, you may recall that shortly after the September 11th terrorist attacks on New York City and the Pentagon, the government of Kuwait permitted its ham radio operators to the call sign 9K2USA. Now Bob Furzer, 9K2ZZ, reports a very positive response to the use of 9K2USA.

9K2USA was used by all Kuwaiti hams through September 30th as a token of the sympathy and support for the people of the United States from the citizens of Kuwait. It was also meant to be a statement of deep condolence.

Furzer now tells the Ohio Penn D-X Newsletter that the Kuwait Amateur Radio Society wants to thank all of those radio amateurs who e-mailed their support of the use of this special call. 9K2ZZ also says that the design of an official commemorative 9K2USA Q-S-L card has been finalized and is now posted on the website at www.k4cy.com. (OPDX)

From the U-K comes word of a new microwave D-X record. At least a new record for that nation. On Sunday October 21st the UK distance record for the 47 GHz band was raised from 163 to 203 kilometres. This happened when G7MRF and G0HNW, from Cambret Hill in grid I-O-74 had a two-way CW contact with G0IVA in gridsquare I-O-73 in North Wales. This distance comfortably exceeds the former record of 161 kilometres set in September 1999 by the same group. Reports of RST 519 and 419 were exchanged. (RSGB)

**

THAT FINAL ITEM: A MESSAGE TO REPEATER OWNERS FROM THE FCC

And finally this week, a word about repeater communications responsibility. It comes from the FCC's chief ham radio rules enforcer Riley Hollingsworth, and was included in a recent RAIN Enforcement Log Question and Answer session. If you own and operate a repeater, the next few minutes will be very important to you:

--

First of all, no licensee is required by the [FCC] rules to set up a repeater. When you do so, you do have certain responsibilities.

First, assuming that you have applied for and received coordination from your local repeater coordinating body -- if there is one -- and in a lot of areas there are not and in which case you would skip that step. As long as you are not interfering with a coordinated repeater, everything is all-right.

Once you start a repeater, you have to keep a few things in mind. First of all, if it is using your call sign -- it is your station -- and you are responsible for it. You do have a few alternatives as far as controlling it, but essentially it is your station and your responsibility.

The rule that states that you are not responsible for inadvertent transmissions I am afraid is often misunderstood. It only applies to inadvertent transmissions. [These are] transmissions that you let through on the repeater -- and I think it was designed for [modes like] packet anyway that you let through on the repeater before you realized what was happening.

Now, rules violations that occur by your users on a day-in and day-out basis or rule violations that go on for several hours are your responsibility as well as that of the users that are committing the violations. No dictionary in the world would define those types of situations as "inadvertent," and I am afraid that a lot of people just do not understand that.

If you put a repeater on [the air] you are responsible for its proper operation. Now, if you can't do that, or you do not have the time or the inclination [to properly control it], then your choice is to shut if off and to do something else. This is very important in these times because Amateurs are being listened to more than ever before.

Everyone seems to be buying scanners and short-wave radios. Very often a repeater is new person's first exposure to Amateur Radio -- and a potential recruit -- I might add. And, very often, it is the news media's first exposure to Amateur Radio.

If your repeater is an embarrassment to Amateur Radio, then you should shut it down and seriously examine your motives for wanting a repeater. You will be held responsible for regularly occurring rules violations, as well as the people committing the violations.

I would hope that more and more Amateurs would understand this. I think that the rule that you are not responsible for inadvertent transmissions has been misinterpreted by a number of people.

--

What Hollingsworth really seems to be saying is that your repeater is kind of like your house and your surrounding property. Yes, you have responsibility to make your home secure for you and your family. You also have a responsibility to keep it and its surroundings neat and clean so that your neighbors will also enjoy the view. (FCC, RAIN)

One easy way to tell; can you understand it?

If so, it's AM, and almost certainly coming from a CBer, rather than a
ham. If it sounds garbled, it's SSB, and could be from either.

Grab a cheap CB and check through the channels until you find him,
then listen until he gives away his location. Once you have that, go
to the FCC.

I'm sorry, Steve, but you're wrong about that. Remember we're talking about civil actions in non-combat areas. In those situations, the military, including the National Guard, does not allow a bunch of enlisted personnel to run around with live ammunition in their weapons that might endanger civilians or other military personnel in the area. In many cases, there is no magazine in the weapon, and, when there is, there is often no ammunition in the magazine. When involved in a routine situation (force protection, civil duties, etc), the ammunition is kept in a secure location and cannot be issued without the specific orders of a senior officer. Those orders will not be given unless the situation truly warrants it (an immediate threat) and there is sufficient supervision of each armed person. Until those orders are received, personnel are instructed to observe and to allow local law enforcement personnel, or the military police (if on a military facility), to handle the situation.

Now, as I said earlier, I do not know for certain if National Guard personnel at airports following the WTC attack have access to live ammunition (if the attack constitutes an immediate threat), but I doubt it. In fact, if I thought they were actually armed with live ammunition, I would be even more concerned (they are more likely to accidentally shoot themselves, or a civilian in the area, than any terrorist).

Exactly the point, Larry! Thank you for stating it so succintly.

If "fireman" is defined as "one who controls fires", we're all set.

btw, 2200 gal fo fuel and 4700 A are numbers applicable to a single, small
diesel-electric locomotive.

>questions correctly. The same applies for other sub-topics like
>receiver components, band privileges, operating practices,
>propagation, emergency communications, test equipment, and other
>areas.

Yup. That's a problem with the written test. People with big hoes in their
knowledge can still pass the writtens.
>
>On the other hand, one MUST pass the Morse Code exam in order to
>upgrade to General and Amateur Extra, regardless of one's knowledge of
>other topics or performance on the written exams. Thus, Morse Code
>has the unilateral pass/fail power that NO other topic has.

Depends what you consider a "topic". If you subdivide the topic "theory" into
things like "antennas", "DC Ohm's Law", "symbols" etc., etc., that is true. If
you consider "theory" as a single topic, it's not true.
>
>QUESTION: Does Morse Code testing deserve its unilateral pass/fail
>authority that no other topic has? If so, why?

You miss a ery important fact, Jason. The separate, unilateral Morse test is
there because international treaty requires it. The FCC has made it clear that
the treaty requirement is the ONLY reason the test is being retained. It cannot
be made part of another test for that reason.

I have never read a more arrogant and ignorant piece of tripe about
current policy and procedure for the carrying of automatic or personal sidearms
in the Armed Forces, Dwight. And insulting, to boot.....

Where are you getting this tripe? From Lennie the Clueless? Do you
really believe this crap or are you just TRYING to be foolish in public? If
you are, you have succeeded.

>In many cases, there is no magazine in the weapon, and, when there is,
>there is often no ammunition in the magazine.

(1) Show me a RECENT picture of a Guardsman carying an M-16 that DIDN'T
have a magazine in the well.

(2) PROVE (by reference to current NGB Directive or Flag Officer order)
that says they are to "pretend" these weapons are loaded.

I'll quote an acitve NG MP Officer...."They won't order us to carry a
weapon that we do not have the resources to use. There are criminal elements
that would mob every Guardsman they saw if they thought that they (the
Guardsman) didn't have the werewithall to defend themselves and that weapon. If
we are ordered to carry our firearms, we are locked and loaded. The only
occassion where you will see us in public carrying an unloaded weapon is
ceremonial sitautions".

>When involved in a
>routine situation (force protection, civil duties, etc), the
>ammunition is kept in a secure location and cannot be issued without
>the specific orders of a senior officer. Those orders will not be
>given unless the situation truly warrants it (an immediate threat) and
>there is sufficient supervision of each armed person.

We learned a looooooong time ago (Lebanon, to be specific) that you DON'T
carry an automatic weapon and NOT have the ammunition to USE it. If the weapon
is being carried, the person carrying it has the ammunition, the orders and the
TRAINING to use it...

And by "training" I do not mean just the skills of how to manipulate the weapon, Dwight.

Todays Guardsman are, without fear of contradiction, the finest trained and EDUCATED that the United States has ever fielded. They undergo HUNDREDS of hours of classes on riot control, including the use of deadly force.

WHEN was the last time you saw a National Guardsman unsling his weapon, let alone aim it at anyone, Dwight?

>Until those
>orders are received, personnel are instructed to observe and to allow
>local law enforcement personnel, or the military police (if on a
>military facility), to handle the situation.

This is as close to the truth as you come, and with good reason. The Guard does NOT want to be in the position of being the regular police force...They WANT local law enforcement to handle it. And that's the way the laws and military policy are written. >>I<< wouldn't want it any other way.

>Now, as I said earlier, I do not know for certain if National Guard
>personnel at airports following the WTC attack have access to live
>ammunition (if the attack constitutes an immediate threat), but I
>doubt it. In fact, if I thought they were actually armed with live
>ammunition, I would be even more concerned (they are more likely to
>accidentally shoot themselves, or a civilian in the area, than any
>terrorist).

This is nothing less than insulting and ignorant, Dwight. And not necessarily in that order. The last wrongfully wounded civilians at the hands of the National Guard died in May, 1970.

Now...please TRY to post something that has some semblence of factual substance to it, please.....

Steve,

Ignore Dwight. He makes vast pronouncements based on half-vast knowledge, then tries to find wiggle-room when his ignorance is exposed.

Incredibly, he claims to be presently serving on the National Staff of the USCG Auxiliary as a member of the Marketing & Public Affairs Department with responsibility to provide the general public with information about the Coast Guard Auxiliary.

Do you think they'd endorse his apparent disdain for our men and women in uniform?

Hans

Could also be something like an Antron that does not, like a beam or ground plane would, light up and say antenna. Might be hidden in a flagpole or somesuch as well. It will be interesting to see what a survey of the neighbors turns up.

With any luck they live in a burg with the ordinances in place and our friendly neighborhood illegal gets a visit from Officer Grumpy.

Alan Canfora tells a different story from yours, and he most certainly was one of the legitimate leaders who was wounded. Go to www.alancanfora.com You must be talking about Terry Norman, an FBI rat who was chased from the scene after pistol whipping another student with a .38 revolver. Strange how he showed up at an anti-war rally with a gas mask, camera, and was packing heat. All of this happened before the rally even started, and before the guard showed up ordering the crowd to dispearse

Absolutely. I mentioned looking for a LARGE version of something that looks like a rotatable TV antenna and also described a ground plane. You are correct, of course, that not everything advertises 'antenna'. The only question is one of proximity. I have a Hammond X-66 organ which is bothered by CB radios (albeit infrequently) when on the job. Once in a while you hear a CB getting louder then softer as the car drives by the club. Twice, however, the thing kept getting MUCH LOUDER (to the point I killed the power to the equipment). Those two birds were obviously running illegal amps. In any case, the normal ones I've heard (perhaps a dozen over the years) were only picked up from perhaps a hundred feet or less to the road and for perhaps a hundred feet either way down the road. Normal 5 watts would unlikely cause problems as described from much more than a couple of hundred feet (at best). Illegal powered CB or amateur would of course affect the stuff farther away, but it is still likely comming from a fairly close location.

I think as a bare minimum, it should be 25 wpm, a Ph.D. in physics, and successful passing of a background check for the privileges. I'm pro Morse code, but if we are going to be elitist, we might as well be really elitist.

5 wpm is just fine for starting out. Why would it not be?

Larry Roll K3LT wrote:

Dear OM,

My name is Franï¿½ois.
I am a member of a french logistic team going to Geographic North Pole each april. We establish a drifting base at 89 North Latitude, wich name Borneo, for scientistific researchs.

When I was student, my hobby was HAM, with the call sign FE4834.
Actually, I dont have a station, because I have 2 young children. But I hope I will have a new one in some years!!

My hobby actually is collecting polar QSL cards from North or South Pole.
So, can I ask you if you can help me ?
Do you have any spare QSL from Antarctica?

I can send you letters and post cards I have cancelled at the North Pole station with the official post office cachet during my past expeditions.

I'll send you also a SASE with IRC.

I hope we can do good exchanges!
I send you all my best regards and 73's,

SWL Franï¿½ois.

[Response posted AND e-mailed:]

On 13 Nov 2001, TheHirts wrote:
>My husband and I are picking up a ham radio broadcast on our computer, our
>radio, and our telephone. Can anyone tell me if this is legal and if not, who
>I contact to stop it? Please email us at TheHirts@aol.com with any suggestions.
>Thank you!!!

In addition to the other responses:

If you have a cordless phone, note also:

Both the 900 MHz band and the 2.4 GHz band are also amateur radio
bands, and that your phone, as a part 15 unlicensed device, MUST ACCEPT
interference from any properly operating licensed station (amateur, broadcast,
public safety, or other). A 49MHz cordless phone does not overlap an amateur
radio band, but may be sufficiently close to the 6m amateur band that it could
be "overloaded" by a strong signal.

If your computer is relatively new, note this:

The 1.2 GHz band (1240-1300 MHz) is an amateur radio band as well. If
your CPU clock speed falls in this range, this may explain why you're receiving
this through your computer.

For your television:

The amateur 6m band (50-54MHz) is just below channel 2.
The amateur 2m band (144-148Mhz) is the same as CABLE TV channel 18.
The amateur 1.25 band is the same as CABLE TV channel 24.
The amateur 70cm band covers CABLE TV channels 57-61.

If you are hearing the signals ONLY on those channels, and except for 6m, you
have cable TV, then you need to call your cable company. It is legally their
problem to fix.

606. Re: Picking up broadcasts on my computer and telephone

Newsgroup: rec.radio.amateur.policy

Source record: 23603

Could also be something like an Antron that does not, like a beam or ground plane would, light up and say antenna. Might be hidden in a flagpole or somesuch as well. It will be interesting to see what a survey of the neighbors turns up.

I found an antennae about 3 houses away, but upon asking them nicely if they were using a CB, it turns out it is a woman using it. (The voice we a re picking up is a male)
There is a TV antenna next door, I will ask ever-so-nicely if they happen to have a CB or ham.

<<With any luck they live in a burg with the ordinances in place and our friendly neighborhood illegal gets a visit from Officer Grumpy>>
LOL We live in Spokane, WA
I'm not looking to get anyone in trouble here. I just want to be on my computer without a man's voice calling out loudly to someone in Alaska. (When I am alone at night his voice makes me jump about 3 feet in the air!)

Thank you for your help!
~Tracey

Did the "problem" start suddenly? Recently?

It started in the last week or so. The first time we heard him he was telling someone in Nebraska (We are in Washington State) that he got some new equipment.

> bunch of "CB'ERS. If she wants that call, that is her right.

Agreed, although I would have stated it a little different. If Kims callsign is *so wrong*, then the FCC should not have issued it. Since they have issued it, just grow up and get over it everyone! Shift the blame where it belongs..... the issuing agency.

If you can understand the transmission then they are transmitting
AM and that pretty well narrows it down to some CBer who is
probably running illegal power levels (that is probably his new
equipment, an illegal high power amplifier). Ham operators operate
SSB (single side band) and you would not be able to understand the
transmission (would sound very garbled) unless you were receiving
them on a receiver capable of SSB reception. When you think you
have located him, call the FCC.

Good idea. That sounds the most feasible of all, so far. In fact, that could be accomplished with clearly presented photos--maybe even schematics--that could be rotated and changed out every few months.

Sounds like you don't like the idea that there is a difference of opinion about
it, and that people can express their opinions here.

>Shift the blame
>where it belongs..... the issuing agency.

Why? Cobsider the following:

The FCC does not routinely issue the suffix found in Kim's callsign. It is only
available as a vanity call. She asked for, and paid for, that particular
callsign.

Yet you say it's all the FCC's fault. As if it's governments job to "save us
from ourselves".

Sorry, I don't buy it.

What a palaver. They would just buy a cell phone for cash
from the street, then buy a pre-paid card under a fake name,
again with cash, exchange phone numbers by word-of-mouth
or buried in some other info, and chat to each other as much
as they like. The way to hide a drop of water is to pour it
anonymously into the ocean of telecoms.

One comment on this subject. I would lay odds that most people who position themselves as high and mighty on morals are on no more than equal ground with me--in terms of morals and behavior.

I have a callsign which "seems" to be objectionable to some as they boldly pronounce my inhumanity and insults to the amateur radio hobby for having such a callsign. Yet, I'll bet that many of those same people have trashed the hobby in many ways: having an off-color conversation on the air; acting meanly on the air toward either another amateur or someone who can't even defend theirself on the air because they aren't a ham; participating in a political discussion as you express inhuman thoughts toward other people; refusing to support someone for club membership because of some protected class under other circumstances (race, color, nationality...etc.); how many of you have keyed up illegally and made some disgusting comment on the air under cover of a disguised voice?

Don't posture yourself--at least to me--as having higher moral ground than me, because you're nothing but a thief of emotion. Mine is a callsign, simply pronounced on the air as W-5-T-I-T, with *NO* overt comments made about it, nor received about it, save occasionally. While I disagree with you that there is even call for any kind of pause on the morality of my callsign--I surely call you to task about your own activities in ham radio before you appoint yourself as judge! Because with your behaviors on this newsgroup and your comments and sneering, I can assure you that you have neither the respect of myself nor many others; and you surely don't act in the manner you expect others to.

So, save your definition of morality for another time when you've matched your own demands.

One comment on this subject. I would lay odds that most people who position themselves as high and mighty on morals are on no more than equal ground with me--in terms of morals and behavior.

I have a callsign which "seems" to be objectionable to some as they boldly pronounce my inhumanity and insults to the amateur radio hobby for having such a callsign. Yet, I'll bet that many of those same people have trashed the hobby in many ways: having an off-color conversation on the air; acting meanly on the air toward either another amateur or someone who can't even defend theirself on the air because they aren't a ham; participating in a political discussion as you express inhuman thoughts toward other people; refusing to support someone for club membership because of some protected class under other circumstances (race, color, nationality...etc.); how many of you have keyed up illegally and made some disgusting comment on the air under cover of a disguised voice?

Don't posture yourself--at least to me--as having higher moral ground than me, because you're nothing but a thief of emotion. Mine is a callsign, simply pronounced on the air as W-5-T-I-T, with *NO* overt comments made about it, nor received about it, save occasionally. While I disagree with you that there is even call for any kind of pause on the morality of my callsign--I surely call you to task about your own activities in ham radio before you appoint yourself as judge! Because with your behaviors on this newsgroup and your comments and sneering, I can assure you that you have neither the respect of myself nor many others; and you surely don't act in the manner you expect others to.

So, save your definition of morality for another time when you've matched your own demands.

>Get ahold of QST, Jun 01, page 75, upper right hand corner.

>By my eyeball, the RF starts about half a millisecond before the key closes,
>and stops a good 10 milliseconds before the key opens.

Hi, Jim,

I was told that one of the threads had my name on it, so I had to take a look.

The on and off delay in that photo are int he order of tens of milliseconds. In a key line in virtually every solid-state transceiver that I know of, key closure is represented by a logic 0, so the very left of the upper trace going from positive to negative is the time the key is closed. The positive transition on the key signal represents the key being released, so the radio unkeys tens of milliseconds later.

Perhaps it would be helpful if we put a bar over the word "key" in the caption to indicate that the key signal is actually a "key not" signal, indicating that the key line is active on a logic low. That way, those who are not fully versed in circuit and station design won't be confused.

>Do you think you could get Ten-Tec to publish the pulse anticipation circuit

Why? The idea is to have a license with limited but useful privileges
to get new folks started, then full privileges for those who want
them. No learning stuff that one isn't interested in so as to get
privs for the stuff one IS interested in.

> After all is said and done, the one underlying difference between
> the amateur radio service and the other personal radio services (CB,
> FRS, etc.) is the fact that we are licensed to build our own station
> and put it on the air.

There is also the strict non-commercial nature of the ARS.

The concept of "radio operator" is rapidly vanishing from other
services. I understand that the US Navy no longer has the "Radioman"
specialty at all. From what I read, the GROL is more of a license to
adjust and repair equipment than it is to operate.

>We alone are licensed to build a 1.5KW
> transmitter and put it on the air, without any "inspection" of that
> transmitter by the FCC before we stroke up on our favorite band.

Yup. But how many hams actually design and build stations from scratch
and put them on the air? I have done exactly that, and they were not
simple stations, either.
>
> This "permission to experiment", unique to our hobby both in
> the equipment *and* the modes we use, is what sets us apart.

It's not the only thing.

> Restricting our operation and experimentation to only those modes
> or equipment types we have 'endorsements' for, such as is done
> in aviation for example, would be the end of the Amateur Radio

> Service.

How so? The "Basic" license would give some access, in the form of limited power and frequencies. Full privileges would be earned by learning more about the modes and methods used.

Nowhere is type acceptance mentioned in my posts on this.

If a potential ham wants to tinker with 20 meter HF gear, at least a General class license is needed. For tinkering on the low end of 20 meters, an Extra is needed. Does this really stop anyone with a technical interest? Not that I can see.

Not having to learn lots of stuff that is of no interest would increase access, not decrease it.
>
> Since we couldn't tinker with anything new until we had studied
> and tested for the endorsement, experimentation and tinkering would
> come to an immediate halt.

Nonsense. You don't understand the idea, that's all.

>There is little enough of it now, and
> the idea of qualifying for endorsements before we could tinker with
> a new mode or technology would end experimentation within the framework
> of amateur radio for all time.

The reason there is "little enough of that now" has nothing to do with license tests being too hard or limiting people's interest. It has to do with factors like the more non-technical people becoming hams, the constant reduction in real-dollar cost of really good equipment, time constraints, and the increased complexity of typical amateur gear. Plus the fact that most new hams enter via the VHF/UHF route rather than the HF route of years ago.

The new Novice of 1951, 1961 or 1971 was quite likely to build a simple HF CW transmitter to get on the air. Relatively few new Technicians of 2001 are building VHF/UHF FM transmitters to get on the air - not because they are "bad", but because they have so many inexpensive options of manufactured gear.
>

I disagree. There is also the function of promoting the bases and purposes of the ARS.

It won't be "a simple test" if it really tests whether a person knows
how to build equipment that meets the spectral purity specifications.

It's been tried, Hans. They called it CB. The result isn't pretty.

Nothing in the ideas I presented would reduce or restrict
experimentation by hams. You're assuming stuff that isn't there.

Bull. You got that particular callsign for its giggle factor, Kim.
You've said so yourself. At least be honest about the motivation for
that particular choice of letters. It wasn't about birdwatching.

I sure don't want to have to take a new test every time I get
interested in a different mode. Since I've been a licensed General in
June, I've gotten into PSK, Slow Scan TV, and am casting an eye at
meteor work. If I had to take a new test for any of these modes, it
would slow me down a lot.

What would be a good reason to have an amateur have to test for any of
the above, beyond what is already in the tests we take now? For PSK. I
made up the equipment I needed, "listened" in for a couple days to get a
feel for how people operated, and then started in myself. Simple and neat.

> > Restricting our operation and experimentation to only those modes

Sounds like an administrative nightmare.

> Not having to learn lots of stuff that is of no interest would
> increase access, not decrease it.

From a nice narrow viewpoint, maybe. Sounds almost like saying, "I
never plan to parallel park my car, so I want that taken out of the
driving test for me. People who want to parallel park should be the only
ones required to study that".

> >
> > Since we couldn't tinker with anything new until we had studied
> > and tested for the endorsement, experimentation and tinkering would
> > come to an immediate halt.

>
> Nonsense. You don't understand the idea, that's all.

Me either, I guess. I decided to try PSK31, and looked up a few schematics, talked to some local hams, and watched one operating his station. Then I went to buy the parts, and in a weekend I was using the mode (didn't transmit for a while though) If I had to take a test in the mode, it probably would just have been put off. Not to mention I'm going to have to give up a Saturday and another ten bucks every time I want to try a new mode. Major drain on enthusiasm after a while.

Now tell me what this "testing" will improve?

Besides, enforcement would be a nightmare. I can see it now, FCC reports about the dirty low down they caught doing unendorsed meteor scatter work.

Well, maybe it's kinda like when your mom washed your mouth out with
soap. It never really changed the fact that you said what you said. It
just made your mom feel that she had done something about it.

I remember the nuns in CCD class telling us that saying gee and darn was
just as bad as saying Jesus and damn. Guess you can find filth where
ever you want to find it Larry.

On the contrary, I think your callsign expresses humanity at some base
level and you lack of respect for those who might find it objectionable.

It looks like the above is an example of "everyone else is as bad as I
am" and that sentiment does not have any basis in fact. It is simply a
guess on your part.

I think it's a funny callsign. I always thought it was a funny name for
a bird. As a female anatomical part, they're one of my favorites. :-)

Really? I think it's off-color and disgusting that some of these old coots
on 20m talk about their medical problems on the air in graphic detail.

As you see, everyone has something which they're offended by.

If Ed is correct about the logic levels, then it looks like there's
about an 18 msec turn-on delay, and about a 10 msec turn-off delay.

There's a few things that look kinda weird there. Methinks the radio
doesn't like to be keyed that rapidly. Notice the second burst isn't
the same as the first, which isn't unusual necessarily, but there's even
a longer turn-on delay - apparently due to turn-on shaping. At that
keying rate (20 msec pulse width), the RF burst is virtually 180 degrees
out of phase with the key.

Maybe Ed is just being polite about how poor the performance appears to
be.

I've steered clear of this thread (because I think it's inane), but you
keep flogging it, so here are my thoughts.

First, I don't have a clue about your "morals and behavior" and I'm not
interested at.

>I have a callsign which "seems" to be objectionable to some as they boldly
>pronounce my inhumanity and insults to the amateur radio hobby for having
>such a callsign.

Second, don't flatter yourself. Nobody has called you inhuman that I know
about. Nobody has called you immoral that I know about. You're just too
low on the radar screen to rate such sort of serious labels.

I just think your choice of callsign is really, really tacky (as in low
class trash).

Third, I've never engaged in any of the other trashy behavior you listed
in your jeremiad.

->
->If Ed is correct about the logic levels, then it looks like there's
->about an 18 msec turn-on delay, and about a 10 msec turn-off delay.

Oh, I think I see what you are saying...but that doesn't make any sense either.

The upper trace is key closure, and I'm presuming the standard "up is positive" orientation. That means that the key is closed when the upper trace is at the fifth graticle line up, and the key is open when the trace is at the seventh line. The transmitter is "on" when the bottom waveform is "fat" and "off" with a straight line.

Now look at the picture. The first thing we see at the first vertical graticle line from the left is the start of the trace. Evidently the key is "on" (low), but at this time the transmitter is "off". When the key is high ("off") the transmitter turns on.

Now if we presume opposite logic for the key trace (up is on, down is off) then we still have the original pulse anticipation problem.

Either way, I don't understand how this picture was taken. And it's not the traditional "printer's goof" of printing the picture in mirror because the numbers on the screen (the 90-10 risetime ticks) at the left side of the screen is clearly right-reading.

Depends on what level one starts with when you "build" a station.
One could use components defined as: transceiver, power supply,
coax, linear, dedicated 230VAC circuit, more coax and antenna.
And a code key and/or mic. Or do you want to build your own
vacuum tubes, wind coils, smelt silicon and make your own ICs? :-)

Remember the purpose of any and all modes is to communicate
with other hams with equipment set up for that particular mode.
If you don't do it right, you don't achieve communications. Seems
enough of a "test" or "endorsement" to me.

Talk about not making sense. :-) According to Ed (and common sense),
the trace is low when the key is closed.

> The transmitter is "on" when the bottom waveform is "fat" and "off" with

That is consistent with my observations (and my comments).

> Now if we presume opposite logic for the key trace (up is on, down is off) then

I wouldn't bother with that presumption (unless you believe in
anticipation circuits). ;-)

> Either way, I don't understand how this picture was taken. And it's not the

The pictures indicate that there is about an 18 msec turn-on delay, and
about a 10 msec turn-off delay. Whether there is a printers goof or not
is unknown to me. Interestingly, the ARRL lab measured receive-transmit
turnaround time (tx delay) for SSB as being 20 msec in their written
specs. Also note that Ten Tec did not supply any CW keying
specifications in their literature for this radio.

Jim, N2EY, posted:

> The concept of "radio operator" is rapidly vanishing from other
> services. I understand that the US Navy no longer has the "Radioman"
> specialty at all. From what I read, the GROL is more of a license to
> adjust and repair equipment than it is to operate.

Sad, but true. I think it started when broadcasting management
questioned the necessity for having to hire licensed operators when,
in fact, it was the station licensee who was ultimately responsible
for station operation in any case. The other commercial services'
lobbyists piled on and my First 'Phone became history.

In light of this history, I have wondered, like Hans, whether
the 'operator' part of the combined amateur operator/station
license is obsolete. Perhaps he's right -- all you do is sign
a form saying you are cognizant of the relevant rules and regs
and are not a convicted felon or previous radio miscreant -- and
back comes a *STATION* license. Screw up and the FCC jerks
the STATION license. Strict accountablility, but no a-priori,
operating-skill qualifications.

Jim, N2EY, responded to Hans' proposal with:

> It's been tried, Hans. They called it CB. The result isn't pretty.

That's been hashed over -- a lot. Other factors, like very poor
frequency selection for a "local" service, play in there too.
But a lot of the opinion I see is that a corner was definitely
turned when the FCC transitioned it to a completely licenseless
service and gave up on enforcement. I don't think that is what
Hans was proposing.

Till now, you just call her low class trash. A callsign is a sequence
of letters and numbers assign by the FCC to identify a station/operator.
You the one that assigns another meaning to her callsign.

W5TIT mean W5TIT and only W5TIT, nothing else.

Larry

->specifications in their literature for this radio.

Ah, no, one of the Jims in this exchange isn't getting it. Right now I'm not sure which one it is. {;-)

OK, let's start with the key pulses going from left to right, just like a normal oscilloscope sweep.

Are you saying that the key pulses and the transmit pulses are almost 180 degrees out of phase because of DELAY????

That is, at the far left side of the screen we just barely see the fall of the key line, supposedly turning the transmitter on. Twenty milliseconds later (see further comment) the transmitter turns on. Then the key turns off and ....

AHA. Hoist on my own petard. See how the center of the oscilloscope screen all of a sudden has a twofer graticle change? That is, what is one graticle on the outside of the screen is actually two divisions on the center? Which one do you suppose the boys in the lab meant when they said 10 ms/div? The outer? Or the inner? I was seeing 4 divisions between the center-screen off-on key pulse (comes down right exactly on the center graticle) and the transmitter turn-on. You can argue that this is either 20 or 40 milliseconds, depending on your interpretation of "ms/div".

So what you are really saying is that the pulses are really 180 out because of turn on / turn off delay? Sheesh. Bit in the butt again.

Thanks for the interchange...

It's been a long time since we've heard from Larry the homemade lawyer.
If you've followed this thread, you'll note *why* Kim chose the call.
It wasn't randomly chosen. It was chosen so Tugboat Annie...er, Kim
could have fun with the boys.

Try to keep up.

>diesel-electric locomotive.

Jim:

You mean, they make bigger ones? I'd like to see the numbers on them! I thought that they just ganged several similar locomotives together in order to pull longer, heavier freight trains.

I've also wondered why the diesel-electric hybrid scheme hasn't been applied to other vehicles, like over-the-road trucks, busses, even passenger cars? Seems like that using the right combination of engine, generator, and traction motors, a great deal of efficiency could be achieved. Present day hybrid cars persist in making a direct mechanical connection between the small gasoline engine and the drivetrain through a transmission; eliminating that step, and going to direct traction motors would seem to take a lot of slack out of the system. While stationed in Germany and England, I rode a lot of Inter-city trains and trolley cars. I was always impressed by the smooth, responsive delivery of power by those traction motors. From a standing start, they generated almost neck-snapping torque; then smoothly and quickly accelerated a very heavy vehicle to very impressive speeds, never seeming to labor at any part of the acceleration curve. Then, to stop, they are put in generator-braking mode, and actually create more electricity as they decelerate. What an extraordinarily efficient system!

I have a feeling that the only reason we're not using more hybrid vehicles is because the oil companies would see all their profits go out the window -- and they'd have to be selling fuel at 50 cents a gallon to consumers with vehicles that got 75 MPG. Where is the outrage?

> to boot...

Lets bring everyone reading up to date on the discussion so far. While talking about the National Guard in domestic situations, you made the statement, "...you can bet, Sir, that if you see a firearm brandished, it HAS ammunition in it." You followed that up with, "If you see a magazine in the well, it's loaded." I responded with, "I'm sorry, Steve, but you're wrong about that."

You responded with the garbage at the top of this message and then later challenged me to prove it (by reference to current NGB Directive or Flag Officer order). Okay, I'll be glad to. Take a scroll over the the Michigan National Guard's home page, look under the JAG's (Judge Advocate General) directory, and take a careful look at the document; "Command Legal Issues, Domestic Operations: Support of Civil Authorities.

http://www.michguard.com/jag/domestic%20operations.htm

Towards the bottom of that document, you will see a sample ROE (Rules of Engagement) for domestic operations. This one is the Los Angeles Civil Disturbance ROE prepared by the Joint Task Force LA. About half way down that document, you will see a chart describing the various types of arming orders - six arming orders to be specific.

Notice that four (4) of those arming orders describe weapons carried with no ammunition in them. The fifth one describes a weapon with the magazine in the weapon, but no ammunition in the chamber. And, finally, only the sixth describes a weapon fully loaded. Notice also that only the officer in charge can issue the sixth arming order, and, if you look back through the document above that, you will see that he can only issue that order under the situation described in my previous message (an immediate threat).

Now, after reading that, do you still want to claim that "if you see a firearm brandished, it has ammunition in it," Steve? Before you continue to attack me over an issue you know so little about, I suggest you read up on the subject first. When you're through reading the document above, pop on over to the Army's Training and Doctrine Digital Library and look at Field Manual 100-19 (Domestic Support Operations)...

http://www.adtdl.army.mil/cgi-bin/atdl.dll/fm/100-19/fm10019.htm

...and Field Manual 27-100 (Legal Support to Operations)...

http://www.adtdl.army.mil/cgi-bin/atdl.dll/fm/27-100/toc.htm

Both of these manuals contain material about the use of military personnel in domestic situations. Both contain material about the role of the National Guard in domestic operations. And, finally, both contain material about the use of weapons, and other force, in domestic operations.

> I'll quote an acitve NG MP Officer....

Don't try to change the subject, Steve. Of course the military police are armed. Nobody has disputed that. But, we're not talking about the military police. We were talking about National Guard personnel at airports or other civilian facilities around the country. Now, certainly some of those may indeed be military police officers, but the overwhelming majority are not (the National Guard simply does not have enough military police officers to patrol the facilities currently being patrolled).

> We learned a looooooong time ago (Lebanon,
> to be specific) that you DON'T carry an
> automatic weapon and NOT have the
> ammunition to USE it. If the weapon is being
> carried, the person carrying it has the
> ammunition, the orders and the TRAINING
> to use it...

The United States is not Lebanon, Steve. There are very different policies concerning weapons in a possible hostile situations overseas and weapons used in domestic operations right here in the United States.

My association with the Coast Guard Auxiliary has absolutely nothing to do with this discussion, Hans. The opinions expressed are solely my own (based on information found through public news sources). They do not represent the views of the U.S. Coast Guard or Auxiliary, nor do they represent a statement of my position as a member or representative of either organization. This is further underlined by the fact that I did not attempt to identify any association with either organization when I made those statements.

> Do you think they'd endorse his apparent
> disdain for our men and women in uniform?

And I have no disdain for the men and women in uniform. I made a statement about military policy concerning weapons in domestic situations, which I have backed up with military documentation (read my message to Steve). I also made a statement about personnel with loaded weapons in a domestic situations, which also does not differ from current military policy. If the military was not also worried about accidental shootings, why else would they have arming orders for weapons without live ammunition?

>such a callsign.

Kim:

Your callsign doesn't merely "seem" to be objectionable -- it is *patently*
objectionable!

>Yet, I'll bet that many of those same people have trashed
>the hobby in many ways: having an off-color conversation on the air; acting
>meanly on the air toward either another amateur or someone who can't even
>defend theirself on the air because they aren't a ham; participating in a

>refusing to support someone for club membership because of some protected
>class under other circumstances (race, color, nationality...etc.); how many
>of you have keyed up illegally and made some disgusting comment on the air
>under cover of a disguised voice?

I'm sure that kind of thing happens, but since I know how to use CW and a
handful of digital modes, I generally don't run into that type of on-the-air
behavior.

>Don't posture yourself--at least to me--as having higher moral ground than
>me, because you're nothing but a thief of emotion. Mine is a callsign,
>simply pronounced on the air as W-5-T-I-T, with *NO* overt comments made
>about it, nor received about it, save occasionally.

So…which is it, Kim? *No* overt comments, or only *occasional* overt
comments? I suggest that it is exactly this type of confusion which caused you
to make the poor choice of selecting that callsign in the first place!

>While I disagree with
>you that there is even call for any kind of pause on the morality of my
>callsign--I surely call you to task about your own activities in ham radio
>before you appoint yourself as judge!

I think that before you do that, you'd better take a close look at who
decided to choose a sexually provocative callsign which is demeaning to
hams in general, and female hams in particular!

>Because with your behaviors on this
>newsgroup and your comments and sneering, I can assure you that you have
>neither the respect of myself nor many others; and you surely don't act in
>the manner you expect others to.

Kim dear, you're the last one who would be qualified to make judgements about other people's "respect" for themselves or others. If you had any, you wouldn't have selected your callsign in the first place, or, at the very least, would endeavor to change it with all due dispatch.

>So, save your definition of morality for another time when you've matched
>your own demands.

Again, you are not the one to be making such statements. In case you haven't noticed, *you* are the Captain of a burning, sinking ship. If I were you, I'd be looking for a life raft! I'm sure you can find one at the ULS web site!

Don't look just now, Jim, but I hear the FCC is planning such a
license. They're going to call it "Technician", have a quick and
easy test (no Morse test), and new folks can immediately operate
any mode they want, up to 1.5KW, on any frequency above 30MHz.

> The concept of "radio operator" is rapidly vanishing from other
> services. I understand that the US Navy no longer has the "Radioman"

We are not "other services". BTW, the Navy "Radioman" rating has
it's name changed to "Information Technician" and their range of
duties and skill increased (still includes radio), and they still
wear sparks on their sleeve.

> > --

Nope. And it shouldn't be simple. If you want to play with powerful
toys, you better understand how to keep them from trashing the
playground.

> Nothing in the ideas I presented would reduce or restrict
> experimentation by hams. You're assuming stuff that isn't there.

Of course it would restrict experimentation! Under your plan,
no new mode could ever be developed by experimentation, since
you must first take a test to use a new mode. Kinda Catch-22'ish,
huh?

I flew to California for a few days. I'm wondering what good is
an M-16 in a crowded airport? How many people can an M-16 steel
jacketed .223 round penetrate before it is spent?

Self righteous ranting snipped.

Nice copy from regs, but not current in recent applications.

>> I'll quote an acitve NG MP Officer....

> Don't try to change the subject, Steve.

A recital of CURRENT policy and procedure is "changing the subject"..?!?!
Just like Lennie.

>We were talking about National Guard
>personnel at airports or other civilian facilities around the country.

Yes we are. If there's a magazine in the weapon, the weapon is loaded.
Period.

>The United States is not Lebanon, Steve.

No screaming Eagle doodo, huh Dwight? That's not what I said.

We got our butt's waxed by rag-tag militia because they saw us "patrolling"
in war-torn streets with M-16's that didn't even have a magazine in the well.
They knew we were not loaded and ready to fire. That's how that suicide bomber
got by the gate. By the time the sentry could react and get a round off, it
was too late.

>There are very different
>policies concerning weapons in a possible hostile situations overseas
>and weapons used in domestic operations right here in the United States.

Hot flash, hot rod...the use of deadly force is authorized. And it's
authorized right here at home.

Now, unless you can show me a regulation that says "carry a weapon with a
blank magazine and fake it", the rest of your rant is trashed.

Adios.

Steve

Your message to me was from policy manuals all dated before 1 September
2001.

It's a new game, Dwight, and you obviously don't know the rules.

And your "comments" were derogatory and snide about the professionalism
and character of the Armed Forces, especially the enlisted personnel.

>I also made a statement about personnel with
>loaded weapons in a domestic situations, which also does not differ
>from current military policy. If the military was not also worried
>about accidental shootings, why else would they have arming orders for
>weapons without live ammunition?

If there's a magazine in the well, the weapon is loaded. Never once in
almost 20 years in the Armed Forces did I ever carry a weapon that had an empty
magazine in it.

If there's a magazine in the well, it's a loaded weapon. Period. Or
perhaps YOU would like to run past some of those guardsmen brandishing a weapon
of your own and find out if they ARE loaded or not....?!?!?

The biggest problem is getting service capabilities in place before letting them loose. Similar problems arose with both the disc brake and the alternator when they were introduced. When Mopar brought out the alternator the urban legends were rife. Automatic trannies were terra incognita at the time they were brought out, the Hydra-matic from the Sherman tank.

The series motor is an admirable device, maximum torque and minimum efficiency at stall and all that but like any DC motor it cannot be sealed. The early diesel-electric locos had some real problems with flooded track and snow. In fact the economics didn't really work over steam until the guy figured out how to allow one engineer to run multiple units; in and of itself steam is cheaper but getting rid of the supporting cast was what tipped the balance toward diesel. The Union Pacific until fairly recently ran moose steam locos on the snow blowers in the Wyoming passes -- and the UP had some real meese in the steam days.

The only good reason the hybrid works, and it is a far better idea at $4 gas BTW, is that it does allow the killing of the engine in urban areas and allows the engine to essentially run at a constant efficient RPM to get its MPG. This is done at the price of what is really a really poor transmission. Another trick that has been tried and is coming out on some Saturns soon is the continuously variable transmission, a neat name that boils down to two cones and a shitpot of belts or chains. First one I ever saw was on a Zenith Cobramatic record changer but they were used on Harley motor scooters and a Dutch car called a DAF. Driving one is an experience if you drive on engine sound.

While I think the energy guys are capable of all sorts of shenanigans this is not their doing but that of building a product that can be repaired by nincompoops and bought by yoyos that buy an SUV to whip granny down to the pool hall.

>w1rfi@aol.com (W1RFI)
>shared these priceless pearls of wisdom:

>>The on and off delay in that photo are in the order of tens of milliseconds.

>The horizontal sweep speed was listed as 10 ms/div.

I guess I had assumed that an on delay of 18 milliseconds for the first dit and about 22 milliseconds for the second dit were close enough to "in the order of tens of milliseconds." I didn't have the photo in front of me when I offered that approximation. I am pleased, however, to share more exact figures with you if it will help you through this confusion.

> Then we've got a more serious problem YET. Are you saying that the
> transceiver RF turns OFF with key closure and ON with key opening? If so,
> that is exactly what that photo is showing.

Not at all, Jim. Perhaps a more detailed explaination to you will make it more clear.

If you look at the photo, the upper trace represents the key line. The key line sits at a level of about 12 volts until the radio is keyed. We do it this way so that the photo can represent the first dit and second dits when the radio is first keyed. This is necessary because different radios can have different characterisitics for the first character after being unkeyed for a while, as the T/R circuitry inside the radio does its things.

To measure the RF delay between the key line going low and RF appearing, we set up the 'scope to trigger on the trigger signal from the keying generator. The result is that only a fraction of a millisecond of key "up" is visible, in the upper left corner of the scope photo. The low level visible immediately following represents the key closure. It stays low for 20 milliseconds, then goes high for 20 milliseconds, then low for 20 milliseconds, then high for 20 milliseconds. Test over.

Now, if you look at the photo, the RF envelope to the left on the lower trace is the first keyed dit after the key closure on the upper trace. At 10 milliseconds per division, that is about 18 milliseconds by my eye, looking at the .pdf on the ARRL members-only web page. The scope sweeps from left to right, so if you start with the key closure on the very left of the screen, as the key line goes from the very briefly shown logic high to logic low, you can easily use the graticule to measure the approximately 18 milliseconds to the appearance of the RF envelope shown to the right of the keying event.

>One way or the other, I believe that the photo is honked, unless there is
>something I'm just not understanding.

Did my more detailed explanation help, Jim? I will talk to the ARRL test engineer to see if we can add about 5 milliseconds of delay between the external trigger output of the keying test generator and the actual key line solid-state-switch closure that keys the rig. That way, about 5 milliseconds of unkeyed signal will appear in the upper trace to help ensure that those who don't know much about keying-circuit desing, use and testing will not misunderstand what they are seeing.

Nope, I sure don't say my callsign like that on the air. It would be
illegal. Since you didn't caution me on that, I presume that you didn't
know that. Many others don't know that, either. So, I suppose I should
guess--as you did with me--that you talk on the air just like you do in your
posts?

Let's see...can you read? It is *NO*, save occasionally. Maybe you don't understand. That means that the incidence of times that anything is ever overtly said on the air about my callsign is negligible in terms of statistics. Oh, I had no confusion at all when I picked my callsign. That it was a poor choice--as I've said many times--is your opinion. (And I hardly care about your opinion).

>

I disagree. I am quite qualified to "make judgements" about other peoples' respect for themselves or others. Your opinion of me is yours, as mine of you is mine. And, unfortunately for you, I respect myself highly. And, I can assure you that the behavior you display on this newsgroup *does not* gain the respect of me or many others. And, I can assure you that you *don't* act in a manner you expect others to. See? That's *my* opinion. And, I'm sorry--but you just can't have it or mold it.

What burning, sinking ship? Are you talking about the ARS? You're so wrong. Ham radio is growing, more and more people are entering the hobby, and even lots of new hams are experimenting with electronics. If you'd get down off your high horse (that's really nothing more than one of those cute little burros) you'd realize that, Larry. I know it would please you to no end to have the ARS just "go away" but it won't, Larry. One can only hope that maybe you will.

Also, I assure you that I am not as attached to my callsign as you are, Larry. Not at all. I'll concentrate on seeing how long I can keep this thread alive. Bet it goes to about...let's see, March? That's about how long you last every year.

> and fake it", the rest of your
> rant is trashed.

Again, I offered an official National Guard document concerning the arming of National Guard personnel in domestic situations. In that document, it described four arming orders where a weapon is carried with no ammunition. That directly contradicts what you said before and directly backs up what I said. Now, lets see if you have the integrity to admit you were wrong.

Oh yes. The biggest current production model I know of is the SD-90MAC freight locomotive.

> I'd like to see the numbers on
>them!

6000 hp, 6000 gallon sectionalized fuel tank, AC traction motors, top speed 75 mph with stock gearing, microprocessor control, all sorts of innovations. There's a link to the EMD website on the site you gave. Or search "SD-90MAC" on your favorite search engine.

> I thought that they just ganged several similar locomotives
>together in order to pull longer, heavier freight trains.

That is still done, of course, but it is more efficient and more economical in most cases to have a few big locos rather than several small ones.
>
>I've also wondered why the diesel-electric hybrid scheme hasn't been
>applied to other vehicles, like over-the-road trucks, busses, even
>passenger cars? Seems like that using the right combination of
>engine, generator, and traction motors, a great deal of efficiency could
>be achieved.

Probably the weight, cost and complexity considerations make it impractical. There's also the imbedded idea of how those vehicles are supposed to work. Look how long it took for the idea of transverse-engine front-wheel drive cars to replace the longitudinal-engine rear-wheel drive concept.

>Present day hybrid cars persist in making a direct
>mechanical connection between the small gasoline engine and the
>drivetrain through a transmission; eliminating that step, and going
>to direct traction motors would seem to take a lot of slack out of

>the system.

Only if the weight and cost of the motors is less than that of the transmission it replaces.

> While stationed in Germany and England, I rode a lot
>of Inter-city trains and trolley cars. I was always impressed by the
>smooth, responsive delivery of power by those traction motors.
>From a standing start, they generated almost neck-snapping torque;
>then smoothly and quickly accelerated a very heavy vehicle to very
>impressive speeds, never seeming to labor at any part of the
>acceleration curve.

Yup. Electric vehicles that are powered by third rail or overhead wire have a BIG advantage: Their energy source is not on the vehicle, so it can be very powerful without adding to the vehicle weight. In addition, electric motors can be designed to deliver very high horsepower for short periods.

> Then, to stop, they are put in generator-braking
>mode, and actually create more electricity as they decelerate. What
>an extraordinarily efficient system!

Yup. Plus they use electricity generated by any method available - coal, oil, hydro, nuclear, etc. Reduces/eliminates dependence on imported oil.

What was the price of gasoline in those countries?
>
>I have a feeling that the only reason we're not using more hybrid
>vehicles is because the oil companies would see all their profits go
>out the window -- and they'd have to be selling fuel at 50 cents a
>gallon to consumers with vehicles that got 75 MPG. Where is the
>outrage?

Hybrid drive is not the answer to that problem. The efficiency of road vehicles will not be tripled or quadrupled by it. Vehicles like the Insight also use batteries and every weight-reducing trick available.

Look up the Volkswagen TDI and see what kind of efficieny is available today in midsized production cars.

The real problem in this country is that the market has long demanded big heavy inefficient vehicles and all but ignored smaller, more efficient ones. Even at $1.50/gallon, the cost of fuel is not a major consideration to most new car buyers. A car that gets 15 MPG and is driven 15,000 miles/yr costs $1500 to fuel at $1.50/gallon. Doubling the MPG to 30 saves only $750/yr.

How many SUVs do you see on the road being used as commuting vehicles, with just one person in each? How many of them NEVER go off-road? Where is the outrage?

The USA could reduce or even eliminate our dependence on imported oil by adopting more efficient transportation. We could have efficient surface transportation systems that would make the Euros look shabby. But it's not fashionable here yet.

And if/when that happens, how long do you think the Morse test will
last? I say the FCC will simply issue an executive order eliminating
the requirement for Element 1. If the FCC doesn't do that right away,
rest assured that there will be at least one petition for it on their
desk within a business day.

The document describes the current policies on the arming of National Guard personnel in domestic operations (if you follow the links I gave you, you will see that the document also applies to domestic terrorist operations). I've seen no document dated after September 1st that would contradict that document.

> And your "comments" were derogatory
> and snide about the professionalism
> and character of the Armed Forces,
> especially the enlisted personnel.

BS, Steve. My comments were accurate and fully in agreement with official military policy. The military does not want to see civilians, or other military personnel, harmed by accidental weapons fire and neither do I. Yet there are several hundred military personnel killed or injured each year by accidental weapons fire. Therefore, if they are armed with live ammunition, it is true that those personnel at the airports are more likely to accidentally shoot themselves, or a civilian in the area, than any terrorist (just like a home owner is more likely to shoot a family member, or themselves, than any robber).

> If there's a magazine in the well,
> the weapon is loaded.

You're changing your story, Steve. You originally said, "...if you see a firearm brandished, it HAS ammunition in it." Now that I've shown that statement to be false, you now change your claim to a "magazine in the well."

Of course, that is equally false. Unless you've figured out a way to fire a weapon without a round in the chamber, a weapon is not loaded until a round is in the chamber. The document I offered also describes an arming order for a weapon with a magazine in the well with no round in the chamber.

>I've seen no document dated after
>September 1st that would contradict that document.

It doesn't have to be a "document", Dwight...just an order from competent authority.

They are armed, Dwight, and capable and trained to use that option. Live with it.

>> And your "comments" were derogatory
>> and snide about the professionalism
>> and character of the Armed Forces,
>> especially the enlisted personnel.
>
>
> BS, Steve. My comments were accurate and fully in agreement with
>official military policy.

No...YOU'RE the "BS" Dwight. NONE of the Armed Forces treats their personnel as Barney Fife, which is exactly what you described.

The weapons are loaded, Dwight, Live with it.

>The military does not want to see civilians,
>or other military personnel, harmed by accidental weapons fire and
>neither do I.

And I am sure that in your rush to believe that there will be no such incidents, you have deluded yourself into believeing that those weapons are empty.

What's empty is your rant.

If there's a magazine in the well of the weapon, it's armed.

>Yet there are several hundred military personnel killed
>or injured each year by accidental weapons fire.

Name me ONE incident where a Guradsman or Soldier, walking a post, has had "accidental fire" that killed or injured anyone.

Those incidents usually occur on the rifle range or in live fire training incidents. Not walking a post.

>Therefore, if they
>are armed with live ammunition, it is true that those personnel at the
>airports are more likely to accidentally shoot themselves, or a
>civilian in the area, than any terrorist (just like a home owner is
>more likely to shoot a family member, or themselves, than any robber).

So by your analogy, all cops carry blank weapons?

Dwight, you are again showing your arrogance against the Armed Forces. Those guys are not Rambo...They are not John Wayne...they are TRAINED, PROFESSIONAL, and RESPONSIBLE soldiers of the Armed Forces of the United States.

>You're changing your story, Steve. You originally said, "...if you
>see a firearm brandished, it HAS ammunition in it." Now that I've
>shown that statement to be false, you now change your claim to a
>"magazine in the well."

Be nit picky, Dwight. The bottom line is that if there is a magazine in the well, it is armed. SO FAR...I ahve yet to see a picture of a Guradsman carrying a weapon that did not have a magazine in.

>Of course, that is equally false. Unless you've figured out a way to
>fire a weapon without a round in the chamber, a weapon is not loaded
>until a round is in the chamber.

Now YOU are changing stories.

If there is a magazine in the well, it is armed.

>The document I offered also describes
>an arming order for a weapon with a magazine in the well with no round
>in the chamber.

If there is a magazine in the well, the weapon is loaded.

It really is THAT simple.

Steve

I think the callsign is fine... and you're partly right Jim... the name
for a bird is actually names for many bird species...

The following are all commonly referred to as TITS...

Titmice is the family Paridae...

TUFTED TITMOUSE
BLACK-CRESTED TITMOUSE
PLAIN TITMOUSE
BRIDLED TITOMOUSE
SIBERIAN TIT

also...

WRENTITS are in the family Muscicapidae

BUSHTITS (ahem) are in the family Aegithalidae

And then there's my personal favorite... the red-breated sapsuck....

errr..... never mind ;-)

I can just see it pinned on one of those "If it's not CW, it's just CB" t-shirts.

Crap like this is why I favor coordinating ARES/RACES/REACT clothing with local emergency services; you want to look professional, (unlike the blaze orange REACT t-shirts) but at the same time, you want the color scheme and insignia to be hard to mistake for any of the other services that might be around.

> specifications in their literature for this radio.

I haven't been able to look ;at the picture in question but...

The truth is a key does NOT close instantaneously. in fact, well before what would be presumed to be 'closure' there is an exchange of photons between the plates when they are in close proximity to each other. Remember these are not two separate and distinct plates but are (in reality) two collections (bundles) of electromotive force so there is an exchange on a sub-atomic level which can and does intigate current flow and changes in signal level well before the perceived (assumed) closure time.

It probably, because of the high impedance nature of the circuit, takes very little of the initial charge to 'snap' the circuit on.

While working in the lab one day a 'newby' engineer was trying to clock his counter circuit with a common switch he was expecting one clock per finger press. In reality he was getting two orders of magnitude more clocks than he expected. ;-)

I had him look at the output of the switch and the scope indicated that his switch flailed btween one and zero about a hundred or so times before it stabilized at closed. When I told him to use a Hall Effect switch his problem went away.

Rich

Hmmm.... I wonder if Hall Effect switches have been tried as keyers...

That is easy to answer, and welcome to "rec.radio.cb" where you just fell victim to a forged news group message. You'll find that is a VERY common occurrence here, and when the CB pirates get mad enough they pull the stunt in other newsgroups as well. Sooner or later if you like me and several others voice your opinion against illegal CBer's you'll find yourself a victim sooner or later too.

By the way any post from me will NEVER contain a valid return E-mail address, to me, as an anti Spam measure. The forged messages contain them as a sorry attempt at harassment. In fact when the forged messages do contain a valid E-mail address to me it saves me the trouble of looking for the forged messages. I don't ever bother to look for them anyway. Others find them and contact me instead, and I just pass along the message with headers to the forger's ISP, which then either blocks their access or cans the account. Takes about 2 minutes using a saved boiler plate message I send to the ISP involved.

w1rfi@aol.com (W1RFI)
shared these priceless pearls of wisdom:

->Did my more detailed explanation help, Jim? I will talk to the ARRL test
->engineer to see if we can add about 5 milliseconds of delay between the
->external trigger output of the keying test generator and the actual key line
->solid-state-switch closure that keys the rig. That way, about 5 milliseconds
->of unkeyed signal will appear in the upper trace to help ensure that those who
->don't know much about keying-circuit desing, use and testing will not
->misunderstand what they are seeing.

No, I misinterpreted two things about the picture. One, I couldn't get it through my head that the RF pulse could be so coincident with the "key off" pulse as to be totally misunderstood. Two, if you look at the center of the oscilloscope face (where I generally make my measurements, as it is considered the most linear part of the screen) you will see "divisions" that are half as wide as the outer divisions. This caused a 2:1 misinterpretation in the data. When you say 10 ms/div, you really ought to say 10 ms/cm and there wouldn't have been the problem.

I don't think giving the test engineer the direction that more or less of the trigger ought to be shown. The easiest way to clear up confusion like this is to make the on/off keying pulse asymmetrical. That is, twice as long off as on, or some other ratio so that there can be no confusion about what waveforms go together.

Just my 8% of two bits worth...

Actually, I get a bit uneasy about the motives of amateurs who
"want to look professional". They mostly seem to have a 'wannabe
official' attitude, rather than just pitch in and help with the
emergency. After many local incidents (floods, tornadoes, etc.)
I have learned to steer clear of "amateurs in uniform" who more
often than not have no expertise other than wearing blue jumpsuits
with lots of embroidered patches.

Maybe I didn't word that quite as well as I should...I want to be identifiable, but at the same time, I don't want to be associated with the guy in the bermuda shorts, knee socks, cowboy boots, "Beer Man" baseball cap, and stained white T-shirt with an ARES patch on his vest. Besides, nobody wants a bunch of sloppy looking guys hanging around, regardless of who they're helping.

I *primarily* don't want a victim or bystander, etc mistaking me for a medic, law officer, or anything other than the radio guy. Brass badges, therefore, would be way over the line.

:-) All fine.

There's even the Allan Sherman Titwillow, as I recall. Sounds like a kind of tree, but from what I understand it's actually a species of mouse. :-)

Yes sir. That's what the traces show. They noted that they were
testing at a 60 WPM rate. But just doing some napkin figuring, 60 WPM
*5 CPW = 300 CPM. 300 CPM / 60 SPM = 5 CPS. That's 200 msec per
character. At a period of 40 msec, it looks like they're really testing
at a rate more like 300 WPM.

Small switch engines generate 1500 hp. Modern freight diesels
generate 3000 hp and upwards.

>mode, and actually create more electricity as they decelerate. What
>an extraordinarily efficient system!

An all-electric system owes its efficiency to feeding the electric
power created by "regenerative braking" back into the system to be
used by other traction vehicles on the system. A diesel-electric or
gas-electric vehicle, however, is a stand-alone vehicle and has no
place to ship said energy other than to dissipate it in resistor
banks. This is known as "dynamic braking". There is a mechanical
equivalent on large over-the-road diesel trucks known as "Jakes
brakes".

These schemes work pretty well with large engines and large
vehicles. We wouldn't be happy with the handling characteristics
of a passenger vehicle with such a system.

>I have a feeling that the only reason we're not using more hybrid
>vehicles is because the oil companies would see all their profits go
>out the window

Consider that the most efficient vehicular battery storage is with a
silver-sodium cell, where an otherwise $20,000 vehicle will have
$100,000 worth of silver in the battery.

Are you going to park that in YOUR driveway?

Here's something I agree on with Larry. Putting an "and a" before the last
letter of one's callsign sounds as stupid as those hams who say "hi hi" on
phone to indicate something humorous.

Wouldn't the reason that the FCC didn't routinely issue that call also
stop them from granting it as a vanity call? I doubt that I could
get "foxtrot uniform charlie" or "foxtrot uniform kilowatt" as a
vanity call suffix.

Which is why the most advanced diesel-electric locomotives now have AC
traction motors. No brushes, more HP, greater reliability.

Not really. Diesels cost more to buy but less to run, particularly
back in the days of really cheap diesel fuel. MU'ing was well
developed on electric locos by 1930.

The real economy of diesels over steam, besides lower fuel cost, was
indeed the reduction in the supporting cast, in the form of no more
water tanks or pans, simplified fueling, no more ash disposal, no need
for turntables, and many other simplifications. Crew cost was but a
small part of the cost of operation.

> The Union Pacific until fairly recently

Yup. Plus the layout of the vehicle can be whatever is convenient for
maximum use of space and weight.

> This is done at the price of what is really a really poor
> transmission.

What! I disagree!

Look at WW2 diesel submarines for an example. Their technology wound
up in locomotives.

Bingo. 20 or so years ago VW demonstrated an improved diesel Rabbit
that got 75+ MPG. Used a turbocharged three-cylinder engine, lots of
aluminum for weight reduction, and was so efficient that the only
cooling system was the lube oil. But the market simply wasn't there,
so it was never mass produced.

Look around America's highways and see how many high-mpg cars are on
the road, compared to SUVs and other guzzlers. It ain't pretty.

Not true, Larry.

FCC assigns callsigns sequentially but skips over certain callsigns
because some people might not like them. The skipped calls can be
bought via the vanity call program. That's what Kim did. Her callsign
suffix is not sequentially issued by the FCC.

Note that the period would be that for a "dit", not a whole character.
40 msec "dits" would let you send 5 Hs or Rs per second, so if the
"average" character is about the length of an H or R then 40 msec dits
are about right for 60 WPM. That's pretty quick.

I knew the FCC had certain callsign they would not issue. I am also
aware that if a licensee object to their callsign they request the
issuance another. But the fact remains, the FCC issued W5TIT
and are apparently they satisfied, but some still object.

The tramcars or whatever Larry refers to date from the days when no one wanted steamers in the cities so they were electrified. When they got out beyond the third rail or overheads on came Dr. Diesel's wonderous engine. The hybrid design is somewhat accidental. Electric drive does make more

sense in that the series motor does have a torque curve more related to the problem and the thought of Big Hans slipping the clutch is terrifying.

And I will stand on the system being a really crummy automatic transmission for efficiency alone. It is covered by the vastly increased efficiency of a gasoline engine running at a constant rpm with no changes but a direct coupling, like the continuously variable, is in theory at least a far superior solution. The hybrid, however, does allow a smaller engine so long as one is ready to blow the battery charge to top up the gasoline moxie.

The big advance of the US subs was to be able to charge the batts on the move.

And no matter what advance you make, you still gots to get it fixed.

I wouldn't call it 'switch bounce' since that's not really what's going
on. It's an exchange of charge across the gap when the plates are close
enough for the flashover to occur.

I stand corrected. The switching rate (if we neglect proper Morse spacing) is indeed equivalent to 60 words per minute.

It's apparent that higher rates would be best sent in SSB mode using a sound card, rather than by keying the rig in CW mode in order to avoid shortening the character elements.

>stop them from granting it as a vanity call?

Nope. Not at all. The concept is that they don't sequentially issue certain calls because the recipient might not like them. The result would be a paperwork headache.

I remember years ago a ham got the suffix LID and complained to the FCC. They issued a different call.

But if a ham specifically requests a call on the non-sequential-issue list, and is willing to pay the vanity fee for it, that person is obviously not offended by the proposed call. Refusing to issue it would put the FCC in the position of having to explain why the desired callsign was offensive, what other callsigns were offensive, which ones were not offensive, why and how the decision was made, yada, yada, yada. No way FCC wants that sort of mess. Result is what we have today: certain calls not issued sequentially but available under vanity.

N2EY says:

>I dunno. Check the callsign database.
>
>http://www.qrz.com
>
>You may be surprised.

True story. At the beginning of vanity calls a few years ago, the callsign K0TEX was issued to the Red River Radio Club (in Texas?). Ponder that club name a moment. The call was pulled out of circulation (I seem to recall Riley was involved). A local lady was issued the call N0OKY directly in rotation. KF7UCK is another vanity call which was around for a few months, issued to "Mustang Ranch Radio Club" in Nevada.

Trash no longer surprises me.

To each his own, Krell. I absolutely can't STAND people talking about traffic on the air--that is about as CBish as it can get--in *my* opinion. I can't stand it when people key up on an empty repeater with the sole purpose of making an announcement about the traffic (totally illegal--one way transmission) or weather. I can't stand it when, on one of our local Dallas repeaters the under-sexed bubbas take off with conversations totally inappropriate--in *MY* opinion--for ham radio.

To each his own...

Kim W5TIT (but IDing with the "and a" would be illegal I do believe)

Oh, no, not at all. I don't mind a bit someone telling me I am offensive to
them. What really bothers me is the presumption that their morality must be
everyone else's! Larry has the perfect right to his opinion, and perfect it
is (the right). He really does even have the right to say all the things he
says. He *thinks* he has some kind of empowerment over me to make me mad or

feel guilt, or feel something, anything over the things he says directed at me. Again, I feel nothing other than contempt for someone who believes his morality should be everyone else's.

Ryan:

Please do nothing in support of me--do what you will for your own satisfaction, enjoyment, and conversation. Not knowing you, I wouldn't be able to even give you out some funny ones that would match your personality. Also, please remember that I really didn't choose my callsign based on its obscenity (I don't believe it is obscene)--I chose my callsign because it is the closest thing to *my* vanity (get it...vanity callsign?) that I could get.

I have a friend who's a ham and has the callsign N5BIG--celebrating his quite large shadow he casts (I think he's probably 6' 2-3" maybe taller, and I bet near or a little over 400 pounds).

As to *THE* most offensive 3-letter suffix? I just really don't know. We don't call each other by our suffixes around here, I am still called Kim on the air. But, I heartell of areas where hams call each other by their suffixes. I doubt I'd be offended by much--I am a fairly liberal person. I don't "get" the brotherhood of ham radio...so you'd really have to discuss this with your friends, other older hams, etc. Maybe someday you'll buy into the "brotherhood" of ham radio thing--something I don't think I'll ever identify with. Tradition, to me, is a rather meaningless issue to get involved with when the topic is a hobby. Put me in charge of family tradition, national tradition, holiday tradition, etc. But leave me out of the hobby tradition stuff.

Good luck on your contemplation for a vanity callsign. But part of the whole vanity callsign thing is to make it uniquely yours.

I give up. You are, apparently, never wrong even when confronted by
fact.

If you know it, why the feeble attempt at comparing morse testing with
affirmative action? In what way have you given up the issue when you
make frequent references to it?

No one at any point in this thread has ever claimed that the FCC assigns
meanings to callsigns. It is also not true that I am the only one
wasting time with this. Numerous others, with views pro and con, have
contributed to the discussion. You are among them.

In the '50s the New Haven had some hybrid locomotives built for
passenger service into/out of Grand Central Terminal in New York by
EMD/General Motors. They drew power from electric third rail
(nominally 750 V DC) until White Plains whereupon they used the
diesel engine to generate the DC. They are still in use, as are
several modern General Electric-built Genesis locomotives (same
scheme) used by AMTRAK on the Albany-Penn Station (NY) portion
of the Lake Shore Limited.

All it really means is that the FCC isn't going to be the guardian of good
taste in the choice of amateur callsigns.

There's a BIG difference between what's legal and what's good for a society.

There are _far_ too many such people in our country. I'm one
of those odd-balls who believe that morality is a personal
decision--if your actions don't harm the person or property of a
non-consenting individual (or, of course, a child), it's no one's
business to judge you or your values.

Isn't it funny how some hams seem to be committed to policing
the ars to insure that all of us adhere to THEIR personal values? I'll
bet it cooks Larry to know that "Nudenet" exists on HF and is composed
of nudist/naturist hams who choose to share their interests on the
air--and, of course, in group get-togethers. If it bothers him to see
the "TIT" in your call sign, imagine how he'd feel if . . .

Likewise, dear. Your character is everything I find unattractive in a person. And, I am sure that our definitions of "fun" are diametrically opposed. For instance, I would hardly take pleasure in being a kept woman.

Jim, not that Richard is right or wrong--but your response makes it sound as though your degree means more than the knowledge or intellect on the subject. Not that it matters to you...but a whole lot of people wouldn't get past that and give you half a minute of time...

In other words, I am certainly unimpressed with your attitude; and I'll bet a whole bunch of people would be (based on casual observations and prior experience with humans, N2EY :>). An attitude such as the one you express above would have me "respecting" you much less than I would have otherwise.

I'll bet the less degreed Richard puts forth a much more dignified response.

So you don't consider the Judge Advocate General (JAG) Corps of the Michigan National Guard to be a competent authority? Okay, I see where you're coming from - you're not going to accept anyone as a competent authority unless they agree with you.

> So by your analogy, all cops carry
> blank weapons?

National Guard personal are not law enforcement officers ("cops," as you call them), so there is no possible analogy to be made.

> Dwight, you are again showing your

Yes, they are well trained, professional, responsible, soldiers, who are excellent at doing what they were trained to do - fight wars. But we're not talking about their ability to fight a war - we're talking about carrying loaded weapons in a civilian environment here in the Unites States.

> If there is a magazine in the well, the

Yes, I guess things would be simple to a person who blindly holds to a position in spite of clear evidence opposing that position.

Now you'd have us believe that your area is the whole South or the whole U.S. How much of the Affirmative Action era did you spend there? Do you know anything about other parts of the country? Can you come up with any verifiable facts to support your claim or are you just blowing smoke?

Steve, you have no idea what you're talking about. It is clear that you know very little about military policy, so lets see some evidence that you know more about current practice than anyone else reading this thread. The military works hard to establish policies for situations like this (they don't like to be caught off guard), and I've seen nothing to even suggest they have deviated from those policies in this situation.

By the way, have you noticed the recent change in this situation? Just within the last week or so, the National Guard personnel at the airports have begun to wear holstered pistols instead of carrying M-16 rifles. Seems someone was bothered by the spectacle of soldiers walking through crowded airports with rifles haphazardly slung over the shoulder (the haphazard handling is what made me suspect the weapons weren't actually loaded).

Sez you. How about your actions offending the sensibilities of another?
What you do in the privacy of your domain is one thing. Anything you do
in public is...public. If you'd like to assign yourself a secret
callsign, known only to you, it is fine with me.

Isn't it funny that some will go to great lengths to offend in order to
prove a point that they "have a right" even while others have a right
not to be offended. Your lack of judgement or taste is only protected
to a point.

This is certainly beginning to sound Freudian, Kim. You made the comment, not I. Now you've added this "kept woman" thing. I've certainly not mentioned, thought or written at any time, anything about wanting you or making you into a kept woman. I like my women taller, thinner and less "in your face". I'm married to the only woman who interests me. I will accept your disdain for my type to be a compliment and you comment about the differences in our concepts of fun to reflect upon my good judgement. You'll also note that I don't refer to you as "dear".

If your yawn indicates boredom, you needn't bother yourself with
responses to thread. If it indicates lack of sleep, perhaps that's why
you have trouble following along. Cecil is the person who made the
comparison between morse testing and Affirmative Action. He was, as he
is frequently, wrong.

On the contrary, I said I don't know how it was except in Small Southern Town, USA. If you would read my postings instead of just emoting, you wouldn't embarrass yourself like that. You know absolutely nothing about what happened in my home town yet you present yourself as an expert on my home town. You can start to redeem yourself by telling me how many traffic lights we have.

> Can you come up with any verifiable facts to support your claim or are you
> just blowing smoke?

I commuted to Sam Houston State Teacher's College with a black lady while I was obtaining my Texas Teaching Certificate. She was getting one also along with a Master's Degree. She was a superior person with a high IQ. She could not get a teaching job in Madison County so she got one in Harris County. Affirmative Action later allowed her to move back to her home town and teach. Incompetent white teachers were let go and competent black teachers were hired. Left to the tyranny of the white majority, that would not have happened even with the civil rights law in place. My low-IQ cousin, who had flunked out of Texas A&M, was one of the teachers who was let go. He was teaching his students that transistors were made out of geranium.

To you, perhaps. It is *not* objectionable to everyone, as evidenced by
other postings in this newsgroup. And it isn't objectionable to me.

I don't understand why there's a big fuss about this. Sheesh. If Kim were
male, I'd at least have an idea why some found it objectionable -- but
she's not. Would people have the same objection for 'W5TEAT'? (You do know
the correct pronounciation of 'teat' is 'tit', right?)

wrote:

>Sez you. How about your actions offending the sensibilities of another?

I'll make you a deal. If you agree not to offend MY
sensibilities, I'll agree not to offend yours.

BTW, mine include the public practice or promotion of
Christian religion, prejudice, hypocrisy, and voting Republican! :-)

Since you believe my actions should not offend your
sensibilities, I assume you are willing to avoid ALL of these offenses
to MY sensibilities, right?

Or are YOUR values somehow more relevant than mine?

>What you do in the privacy of your domain is one thing.

Tell that to the morality cops! In many states consensual
sexual activities between MARRIED couples are illegal, in 37 states
homosexual activities between consenting adults in private are
illegal, and in every state the government bans nudity on PRIVATE
property (i.e., nudist clubs, etc.). "Swing clubs" which involve
activities only concerning consenting adults in a private setting are
illegal (and commonly raided), many communities ban adult businesses
which are frequented only by consenting adults. Obviously, these are
only a few of the many possible examples.

Given that the state insists that it has the right to tell
people what is or is not moral for us to do, it's unreasonable to
expect anyone to avoid doing something (such as choosing a call sign
that you don't personally like) that is NOT illegal. It isn't our
responsibility to investigate the sensibilities of others if the state
has chosen to make those decisions for us.

More importantly, we live in a free society, at least
theoretically, if not in fact. That means, basically, that we all have
to agree to accept the differences that exist between us and to
tolerate behaviors that _may_ offend our sensibilities. To paraphrase
Peter McWilliams, it's rather like two children playing with their
toys. You may not like watching Johnny playing with his toy soldiers,
but unless you are willing to tolerate his doing so, you have no right
to offend HIS sensibilities by playing with your dolls. In short, if
you want the right to live by your own moral standards you must, by
necessity, allow others to do so as well.

> Anything you do in public is...public.

Ok, stop attending church. I find the position of the
Christian Churches offensive in that they oppose freedom of choice and
they attempt to influence laws that restrict my rights as a
non-Christian who doesn't share their particular moral values. Since
churches offend my sensibilities, either move them to places where I
needn't see them or be exposed in any way to their influence, or
eliminate them completely.

How does the shoe fit now?

> If you'd like to assign yourself a secret
>callsign, known only to you, it is fine with me.

Really?

I didn't know you supported freebanders (who do precisely
that).

Amazing!

>Isn't it funny that some will go to great lengths to offend in order to

The Turboliners have third rail shoes, too.

When Grand Central was built at the turn of the century, the New York
Central tried to run steamers in the tunnels. A fire convinced the
city fathers to enact an ordinance forbidding the use of steam engines
underground, so the
railroad electrified as far north as Harmon and used electric locos.
The Harlem and some other lines were eventually electrified, too. Now
it all belongs to Metro-North.

No, Dwight, I am going to accept the word of a man who is out there right now, in uniform, carrying an M16 that has a loaded magazine in the well and four extra magazine on his belt, "patrolling" Chattanooga's airport.

"Orders" change as the mission neccessitates. The mission changed on 11 September 2001.

Or do YOU have a problem with reality?

>National Guard personal are not law enforcement officers ("cops," as
>you call them), so there is no possible analogy to be made.

No, they are not "law enforcement"...But they ARE consatbulatory when under the direction of the governor who CAN impose THIER authority in a given area that HE declares as an emergency or disaster area....Which, by the way, is exactly what has occured.

Dwight, I am sorry that you, like Lennie the Loser, insist on believeing ONLY what you can find on websites, but I am a realist and the REALITY of this situation is that National Guard troops are patrolling American territory with loaded weapons against possible foreign terrorists.

It really is THAT simple. Maybe in Michigan or somewhere else someone is pretending to have a loaded weapon, but in Tennessee they are taking this seriously. The Guard's commanders are NOT allowing thier troops to go into harm's way unprepared or incapable of defending themselves or thier assigned posts. This includes the training to know what to do and the tools to do it with.

>Yes, they are well trained, professional, responsible, soldiers, who
>are excellent at doing what they were trained to do - fight wars. But
>we're not talking about their ability to fight a war - we're talking
>about carrying loaded weapons in a civilian environment here in the
>Unites States.

Your GROSS ignorance is showing again, Dwight. The NATIONAL Guard (NOT the Army or Army Reserve) is SPECIFICALLY trained to act and react to CIVILIAN distrubances, using a wide range of weapons and techniques, including the use of deadly force IN ADDITION to thier "warfighting" skills.

That is why the Governor calls out the National Guard....That's thier job...That's what they are trained for.

Live with it.

>Yes, I guess things would be simple to a person who blindly holds to
>a position in spite of clear evidence opposing that position.

The "evidence", Dwight, is a REAL Guardsman carying a REAL M-16 with REAL ammunition...IN the magazine, IN the well of the weapon, READY to fire the weapon if necessity mandates.

It really is THAT simple.

Steve

And you are lying.

>By the way, have you noticed the recent change in this situation?
>Just within the last week or so, the National Guard personnel at the
>airports have begun to wear holstered pistols instead of carrying M-16
>rifles.

Do you know why? The 9MM pistol is NOT supplied in the same quantities as the pistol is, Dwight. The standard persoanl weapon for enlisted personnel is the M-16. Staff NCO's and Officers carry the pistol. IF the situation changes that EVERYONE has to cary thier TO weapon again, you will see lot's of "junior" troops carrying rifles WITHOUT pistols, and lot's of SNCO's and Officers with sidearms.

Furthermore, the M-16 is inappropriate for close quarters combat in which collateral damage is of the highest concern. Even standard ammunition from an M-16 will penetrate several walls in that enviroment, causing death and harm to persons no where near the incident.

>Seems someone was bothered by the spectacle of soldiers
>walking through crowded airports with rifles haphazardly slung over
>the shoulder (the haphazard handling is what made me suspect the
>weapons weren't actually loaded).

"Haphazardly"...sounds awfully liberalish to me...

The sight of armed soldiers carrying armed weapons intimidates even me, and well it should. We have foolishly allowed ourselves to believe that warfare and terorism canot happen here.

Well, it has. And there will continue to BE armed troopps, with one weapon or another, to one degree or another, for the near future to come.

As for what you "suspect", it has no basis in FACT.

Is it also your contention that those sidearms are also empty?

Steve

The main Post Office in St. Louis is built along a tunnel that runs from
Eads Bridge to (old) Union Station. The tunnel is equipped with some mighty

ventilation stacks along 8th St. But when the door to the PO was opened in the 1880's for the first and only time, the loco smoke went right into the PO causing its evacuation. They get the mail on trucks.

I remember the old C&NW beltline in OMA. The Northwestern was one of the last to convert to diesel. I have no clue where they got their coal but it smelled like every two-holer I have ever been in.

Dick

You seemingly change your mind and correct your mistakes over the span of ten or fifteen minutes here. You also attempt to make your 180 degree swivel appear as if it were a virtue. If changing your mind is the key to knowledge, you must be the smartest guy I've ever run into.

I certainly wish I could take you seriously.

Well, Mr. Backwoods philosopher, I've made no attempt to discuss your town. You've tried to discuss only the place where you currently live. I'm not buying into your diversion from your original erroneous claim comparing morse testing and Affirmative Action.

I guess my knowledge base is larger, Cecil. I've lived in the Midwest, and the South along with some of Europe and much of Africa. You talk about what you can from your limited perspective.

If you choose to believe that Affirmative Action lowered no standards and did not cost more qualified whites jobs, stay with your pet theory. Maybe you'll be able to find a way to rationalize why the program was dismantled.

In the mean time, your analogy between Affirmative Action and morse testing is just as poor as it was when first stated by you.

Yep. I'm old enough to remember a time when a First 'Phone opened doors to good jobs for many people. I'm sure employers would argue that it was "featherbedding" to require operator licenses, though!

>In light of this history, I have wondered, like Hans, whether

>operating-skill qualifications.
>
This would not be a good thing. The unique thing about the ARS, and one of the bases and purposes of its very existence, is that hams are technically knowledgeable AND operationally skilled. And in 99% of cases, the amateur is both station owner and operator.

>Jim, N2EY, responded to Hans' proposal with:

>turned when the FCC transitioned it to a completely licenseless

>service and gave up on enforcement. I don't think that is what
>Hans was proposing.
>
Let's look at what happened to the CB service.

The first CB service (1948?) called "Class A" and "Class B" was in the 460 MHz region. Unpopular because of the cost of decent equipment for those frequencies.

1958 saw the Class C and D CB, at 27 MHz or so. The band was chosen because equipment cost was far less. Overtone xtals could be used for a MOPA transmitter, and a single-conversion 455 kc. IF receiver would work OK. Common tubes and parts could be used throughout, and total cost kept below $100.

For the first couple of years things were relatively sane, but by the mid 1960s there were over a million CBs and the FCC couldn't enforce the rules. There were simply too many violators. The end of licensing came about because so few were bothering to be licensed in the first place.

The FCC had egg on its face big time when an AP story with picture showed "First Mama" Betty Ford, mike in hand, joining the CB craze of the '70s. License? What license?
>
The problem was that from the beginning the FCC had never imagined that huge numbers of Americans would buy CB radios and proceed to violate virtually every rule in the book, with impunity. Things were further complicated by a legal loophole involving unlicensed persons.

In the mid '70s the EIA proposed reallocating 220 for a new "Class E" CB service. Fortunately that was shot down.

The BIG question is this: Why did CB go so rotten so quick, but ham radio stay so well behaved, even though both lacked adequate FCC enforcement? The answer is simple: Hams had developed a culture of playing by the rules, while CB had developed a culture of ignoring the rules. The culture of playing by the rules is ingrained in newcomers in part by the licensing process.

In your practice of homosexual activity in your home, how many times
have you been arrested? There are numerous nudist clubs in a number of
states which are legal and which are not raided. Your information is
false. I do not have to attend them and they are not in plain view.
I don't have a problem with them. I don't feel the need to participate
in a "swing club".

> Given that the state insists that it has the right to tell

It is not necessary to do everything not prohibited by law just to prove a point. The "state" is not some faceless and nameless entity. It is us. If you can convince enough of your neighbors that we should have porn palaces, nude dancing, nudist camps and the like on every corner, perhaps you can get some laws changed.

I don't care if Johnny plays with his toy soldiers. I care if ham radio is ruined by obscenity, racism and even Kim's *wink-wink* humorous attempt at adverstising her sagging assets.

Freedom in our society has limits. That you don't like the limits imposed by the society is too bad. We are not an anarchic state.

Your premise is ridiculous.

I don't attend church in the public square. I attend church in a church building. Don't like it? Don't show up. No fair peeking in the windows either.

>No, I misinterpreted two things about the picture. One, I couldn't get it
>through my head that the RF pulse could be so coincident with the "key off"
>pulse as to be totally misunderstood.
We actually had one other inquiry from a fellow who made the same mistake. In actuality, though, the on and off delays are only several milliseconds longer than typical rigs and they do not affect the on-the-air performance in any way I can picture. Keep in mind that they keying speed is about 60 wpm, chosen to represent a speed that allows us to show the rise and fall times and two dits on the screen.

> Two, if you look at the center of the oscilloscope face (where I generally make
> my measurements, as it is considered the most linear part of the screen) you will
> see "divisions" that are half as wide as the outer divisions.

Now I am really confused. The graticule markings on the screen are the same across the entire screen and the linearity is about 2% or so, if I remember Tektronix's spec. I feel quite comformable assuming the screen to be perfectly linear and making measurements at any point on the oscilloscope screen. Am I mis sunderstanding what you are saying?

>This caused a 2:1 misinterpretation in the data.

In what way? The screen is linear?

>When you say 10 ms/div, you really ought to say 10 ms/cm and there wouldn't
>have been the problem.

What are you calling a "division?" I was referring to the graticule markings on the screen, which correspond to 10 ms/cm or 10 ms/div, if one means "division" to mean the graticule markings that divide the scope screen into easily-read divisions.

>I don't think giving the test engineer the direction that more or less of the
>trigger ought to be shown. The easiest way to clear up confusion like this
>is to make the on/off keying pulse asymmetrical. That is, twice as long off as
>on, or some other ratio so that there can be no confusion about what waveforms go
>together.

I think that doing so would really confuse the issue, not help it. The way it is done now, one can draw quite a bit of visual conclusion just by looking at the dits -- if they are occupying about 50% of the time, one knows the rig

won't sound "choppy" on CW. If they are, as some rigs are, less than 25% keyed, one knows that the weighting will be weak at higher speeds, etc. The actual on and off times are secondary, so I would rather have the on/off time the same.

If you have any difficulty figuring out that the initial key closure corresponds to the first dit and the second key closure corresponds to the second dit, feel free to email me and I will be glad to help you interpret the published data.

No. The higher speed (13 & 20 wpm) code tests were unnecessary,
bad public policy and not in conformity 5 USC 706(2)(A). The FCC
dropped the 13 & 20 wpm tests in its 1999 License Restructuring
Decision, but retained the 5wpm test because of ITU rule S25.5.

ITU WRC 2003 meeting will delete rule S25.5, and national
administration will follow by deleting their domestic code test rules.

Not only has the above argument been beaten to death many times
over, it is one of the classics among the empty, meaningless whines
of the PCTA (Pro-Code Test Advocates). The FCC rejected all of the
PCTA's arguments in its 1999 License Restucturing Decision.

It's good to see that they somehow solved the problem of switching
on the fly, which the FL-9s could never do without tearing something
up.
>
>When Grand Central was built at the turn of the century, the New York
>Central tried to run steamers in the tunnels. A fire convinced the

IIRC when the FL-9s were pretty well worn out (1980s) the engine
crews would keep the diesel running all the way down into the
hole in fear that they wouldn't restart and the air in GCT was
the highest smog zone in the US.....

OnTopic - when I rode the Lake Shore Limited from CHI to NYP in the
summer of 2000, there were two other hams working 2-m railroad
mobile as well. It is rare that I ride an AMTRAK run that does not
have another ham as well.

In 1988 I had the opportunity to make an inspection of the AMTRAK
trackside area west of NY's Penn Station and saw that the chutes
which dumped mail sacks from the Main Post Office across the street
to trackside where the Railroad Post Office cars used to stand are
still there. Mail sacks from the RPOs to the PO went up by a
screw-conveyor system, long since removed.

That area has been electrified for most of the 20th Century.

High-sulfur bituminous. I wonder whether there is a market for that
in the US any more.

Snip liberally applied.

Larry, Jason, get off your sophomoric kiesters and get it done. Get your pride out of the way, get your gonads out of the way, get it done. It is not the first and it will not be the last time in your life you get to do something you do not believe makes any sense.

We all recognize this discussion for what it is, the whining of two brats wanting it handed to them. You might be right, you might be wrong but adults do their bitching when they have earned the right to do so.

I suspect you will get to wait another decade. It is not even on the discussion agenda for 2003.

Dick N&#65533;BK

FCC did not agree in its 1999 License Restructuring Decision. To wit:

25. Decision. We have considered the comments on this issue and conclude
that the public interest will best be served by reducing the telegraphy
examination requirement to the minimum requirement that we have found that
meets the Radio Regulations and that has been accepted as proving that the
control operator of a station can ensure the proper operation of that
station. To achieve this result, we will amend Section 97.501 of our Rules
to eliminate the requirement that an individual demonstrate 13 wpm and 20
wpm proficiency in telegraphy before qualifying for any amateur radio
operator license. In reaching this decision, we note that one of the
fundamental purposes underlying our Part 97 rules is to accommodate the
amateur radio operator's proven ability to contribute to the advancement of
the radio art. We believe that an individual's ability to demonstrate
increased Morse code proficiency is not necessarily indicative of that
individual's ability to contribute to the advancement of the radio art. As
a result, we find that such a license qualification rule is not in
furtherance of the purpose of the amateur service and we do not believe that
it continues to serve a regulatory purpose. Consistent with our decision to
eliminate 13 wpm and 20 wpm Morse code proficiency as licensing
requirements, we also are streamlining Section 97.503(b) of our Rules to

reduce the number of telegraphy examination elements from three to one -- specifically, a 5 wpm telegraphy examination. We also conclude that, due to the Radio Regulations, we can not grant the request of the ARRL that we authorize privilege on all amateur service bands below 30 MHz to Technician Class licensees who have not passed a telegraphy examination. While we do not disagree with the ARRL's belief that the best way to learn telegraphy is to use it on-the-air, and that actual use of telegraphy to communicate is proof of the ability to send and receive telegraphic texts, the Radio Regulations provide that the telegraphy requirement may be waived only for an operator of a station transmitting exclusively on frequencies above 30 MHz. In this regard, we also note, as the ARRL states, that the Radio Regulations remain an obligation of the Commission that can not be waived.

26. When considering the issue of telegraphy as an examination requirement to obtain an amateur radio operator license, we begin with a number of general principles. First, the Radio Regulations contain certain requirements that an applicant for an amateur radio license must satisfy. With regard to the telegraphy requirement specifically, the Radio Regulations require that persons seeking a license to operate an amateur radio station must prove that they have the ability to send correctly by hand and to receive correctly by ear texts in Morse code telegraphy signals. The Radio Regulations also provide that this requirement may be waived only for an operator of a station transmitting exclusively on frequencies above 30 MHz. In order to comply with the Radio Regulations, our rules require that every class of amateur radio operator license that authorizes privileges below 30 MHz has, as one of the examination elements that an applicant is required to pass or otherwise receive credit for, a telegraphy examination element. The other principles that we consider relevant to examination requirements are that those requirements pertain to the privileges the operator license authorizes and that they constitute the minimum requirements necessary to demonstrate that the control operator of a station can ensure the proper operation of that station.

27. Few issues coming before us present such a clear dichotomy of viewpoints as does the issue of the appropriate telegraphy examination requirements for an individual to qualify for an amateur radio license. Many of the comments we have received, including comments from groups of amateur radio operators and individual amateur radio operators, support reducing the emphasis on telegraphy proficiency as a license qualification requirement. Other comments contend that any significant reduction of telegraphy examination requirements will be detrimental to the amateur service while providing no long term benefits. In fact, some commenters suggest that a reservoir of operators proficient at the higher Morse code speeds is a public interest benefit and should be encouraged through our Rules.

28. As mentioned above, in the Notice, we asked whether, in the context of the amateur radio operator licensing system and in view of the technologies that amateur radio operators use to communicate today, three telegraphy proficiency levels remain relevant to today's communications practices. We also asked whether we should add elements to the written examination to

ensure a working knowledge of the newer digital technologies, were we to reduce the required Morse code elements. Some commenters state that the current licensing structure overemphasizes the importance of manual telegraphy. Similarly, the ARRL states, "... the current examination structure places a strong emphasis on demonstrating Morse code proficiency, while not requiring demonstrated proficiency in more technically advanced communications techniques". Further, the ARRL states that "telegraphy should not be overemphasized to the exclusion of other operating modes [in the examination system]". Mr. Samuels notes that communications has divided into many different modes, and each one has its own technology and technical requirements. NCVECs and others agree with our assessment that the role of Morse code is decreasing in modern communications. Kenwood states that licensing of persons because they are proficient in Morse code is inconsistent with encouraging those interested in modern telecommunications to join the ranks of amateurs and become skilled in the technical sciences. Another commenter states that potential recruits to the Amateur Radio Service consider the telegraphy requirement archaic and quickly lose interest in becoming amateur radio operators. Many individual commenters also agree that Morse code proficiency is not relevant to modern communications practices and technologies. Other commenters state that the Morse code requirement exists only as a roadblock to prevent current and possible amateur operators from obtaining worldwide frequency privileges or have been used to control access to the HF amateur radio bands. Mr. Robert H. Stephens states that although he passed the 5 wpm examination, he uses telegraphy less than five percent of the time.

29. On the other hand, several commenters equate passing a telegraphy examination to the type of on-the-air operator a licensee will be, proof of skill level, or emergency communication capabilities. Kenwood, however, states that Morse code telecommunications is not a skill used often in emergency communications or disaster relief any longer. Other comments express a personal preference for exchanging messages with other amateur radio stations using telegraphy. While Kenwood agrees with these observations, it states, however, they are not a sufficient justification for keeping Morse code proficiency as a licensing requirement. Courage HANDI-HAM System agrees that while Morse code is fun to use and retains a following in the amateur community, it is no longer essential to HF communications.

30. Based on our review of the record, we are not persuaded by the arguments of those commenters opposing reduction or elimination of the emphasis on telegraphy proficiency as a license requirement in the amateur service. To the extent that these commenters put forth arguments premised on personal preference or concerns regarding on-the-air etiquette amongst amateur radio operators, we reiterate pronouncements made in the Codeless Technician Decision. In that decision, the Commission stated that passing a telegraphy examination, for regulatory purposes, is no more and no less than proof of the examinee's ability to send and receive text in Morse code at some specified rate. Additionally, it addressed the issue of personal preference for telegraphy and claims that passing a Morse code examination would make for a better operator by stating:

We do not concur with the comments alleging that the passing of a telegraphy examination is an indication of the examinee's good character, high intelligence, cooperative demeanor, or willingness to comply with our rules. These traits are also found in individuals who have not passed a telegraphy examination rather that being exclusive to those who have passed such a test. With respect to comments that make claims for the superiority of telegraphy over other types of communications, we do not consider these arguments as germane to this proceeding. The Notice did not propose to discontinue the authorization of telegraphy CW emission types on any amateur service frequency. The amateur service in the future, as it has in the past, can provide to those who personally desire to do so the opportunity to communicate by telegraphy.

We are persuaded that because the amateur service is fundamentally a technical service, the emphasis on Morse code proficiency as a licensing requirement does not comport with the basis and purpose of the service. We note, moreover, that the design of modern communications systems, including personal communication services, satellite, fiber optic, and high definition television systems, are based on digital communication technologies. We also note that no communication system has been designed in many years that depends on hand-keyed telegraphy or the ability to receive messages in Morse code by ear. In contrast, modern communication systems are designed to be automated systems. Given the changes that have occurred in communications in the last fifty years, we believe that reducing the emphasis on telegraphy proficiency as a licensing requirement will allow the amateur service to, as it has in the past, attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves in the areas where the United States needs expertise.

31. We also find unconvincing the argument that telegraphy proficiency is one way to keep amateur radio operators ready to be of service in an emergency. In this regard, we note that most emergency communication today is performed using either voice, data, or video modes. We also note that most amateur radio operators who choose to provide emergency communication do so, according to the amateur radio press, using voice or digital modes of communication, in part, because information can be exchanged much faster using these other modes of communication. Further, we note that in traditional emergency services, such as police, fire, and rescue, there is no requirement that emergency service personnel hold amateur radio licenses or any other license that requires telegraphy proficiency. We conclude, therefore, that telegraphy proficiency is not a significant factor in determining an individual's ability to provide or be prepared to provide emergency communications.

32. The Notice also asked whether we should continue to have three different telegraphy examination standards or whether the telegraphy standard should be reduced to one or two telegraphy examination elements -- and, if so, what the required speed(s) should be. Numerous commenters support a reduction in the number of telegraphy elements from three to one. These commenters disagree, however, regarding what the required telegraphy speed should be. Some commenters state that the only telegraphy speed should be 5 wpm. Other commenters express a preference for a speed of

seven wpm, or the lowest speed allowed by international agreement. Mr. Holton E. Harris states, however, that reducing the Morse code element to a single 5 wpm examination trivializes it to the point that there is no longer a meaningful examination requirement and, thus, it might as well be eliminated.

33. Some commenters support retaining the present 5, 13, and 20 wpm telegraphy examination requirements or increasing the telegraphy requirements for obtaining a FCC-issued amateur service license. Other commenters suggest that we revise the telegraphy examination requirements so that they sunset if the Radio Regulations are revised in year 2001 to eliminate the requirement that an amateur radio operator demonstrate the ability to send by hand and receive by ear texts in the Morse code. Another option advanced in the comments is to reduce the number of telegraphy examination elements from three to two. The American Radio Relay League suggests that we substitute a 12 wpm telegraphy examination for both the 20 wpm telegraphy examination currently required for the Amateur Extra Class operator license and the 13 wpm telegraphy examination currently required for the Advanced Class operator licenses. It also suggests that we reduce the telegraphy requirement for a General Class operator license to 5 wpm, and requests that we authorize privilege below 30 MHz to Technician Class licensees who have not passed a telegraphy examination. Numerous other comments agree that the telegraphy requirement for the General Class operator license should be only a 5 wpm telegraphy examination, while others suggest other proficiency requirements for telegraphy examination elements.

34. We have considered the comments on this issue and conclude that the required speed for the telegraphy examination element should be 5 wpm. In this connection, we note that this is the minimum telegraphy speed that has been required for the Novice Class operator license since 1951, and is the minimum telegraphy proficiency that must be demonstrated by a Technician Class licensee to be authorized HF privileges. Because both of these classes of operator licenses authorizes HF privileges, 5 wpm is a speed that the Commission has found sufficient to meet the requirement of the Radio Regulations, and the slowest telegraphy speed in the amateur service examination system. We believe that, consistent with our decision to reduce the number of telegraphy elements from three to one, we also should use the least burdensome requirement, the 5 wpm requirement, as the standard for that element.

35. Likewise, we will not revise the rules so that the telegraphy examination requirement automatically sunsets if the Radio Regulations are revised to eliminate a mandatory telegraphy proficiency requirement. In this regard, we do not believe that it would be prudent, at this time, to premise the resolution of this issue on decisions to be made at the next World Radio Conference (WRC), particularly given that it is uncertain whether the WRC will actually address this issue. We also note that the International Amateur Radio Union Administrative Council has stated that it opposes changing the Radio Regulations to reduce the minimum international qualifications for an amateur radio license, making the potential changes to

this Radio Regulation even more uncertain.

Correct. Both IARU and ARRL have changed their positions, and now
support the deletion of the ITU S25.5 rule. It is general agreed that
WRC 2003 will delete the rule.

Jason, if you would like more information, go to No-Code International

All right, all right...one more innuendo and then I am out...LOL

Your comment above re: stripping to operate your station? That would give a whole new meaning to the "sticky key" concept, eh? (Just watch out for an open mic).

Ok, gahbye,

Kim W5TIT :o

Hmmm, two of the three geographical locations you mention about, Davey Dear, are not under the jurisdiction of the Affirmative Action laws of the United States. So, exactly in what way is two of the three locations you mention above (i.e., 66% of your submission) relevant to the discussion?

>
> If you choose to believe that Affirmative Action lowered no standards
> and did not cost more qualified whites jobs,
>

Wouldn't *some* level of balance be desirable. You point up that Affirmative Action did not cost more qualified whites' jobs (apostrophe added), yet--what happens when there is *no* affirmative action? More qualified blacks, hispanics, etc., are not even *considered* for the job.

>
> stay with your pet theory.
> Maybe you'll be able to find a way to rationalize why the program was
> dismantled.
>

Davey Dear...please think of something other than slanted comments to efficiently argue your case. You are making Cecil's point (at least to affirmative action), i.e., you demonstrate the irony of the whole situation.

>
> In the mean time, your analogy between Affirmative Action and morse

> Dave K8MN

Things that happen in real life across different disciplines aren't just analogies, Dave, they are real examples of *attitudes* that proliferate and begin to affect the ways in which we approach many things. Getting burnt on the stove top doesn't preclude my making the same assumption about heat from *any* source.

Kim W5TIT

PS--next thing ya know we'll be arguing now over campfires

Not really, Kim. I hardly "talk" on-the-air at all. On Tuesday night, I had my first QSO on the local repeater in over two months -- and that was just because I was on my way to the radio club meeting! Last time I "talked" on HF was during Field Day '99. I was control op for a SSB station during JOTA '98 and '99, but then, a bunch of kids were doing all the "talking." If it wern't for that type of thing, I'd probably just sell my HF microphone.

Oh, I'm a big believer in diesel engines, I make my living driving vehicles
powered by the Ford Powerstroke Diesel and whatever diesel they're
using in '97 GMC full-sized vans. As big and heavy as our Paratransit
busses are, they'll walk away from 95% of the vehicles sitting next to
them when the light goes green!

>The real problem in this country is that the market has long demanded big
>heavy
>inefficient vehicles and all but ignored smaller, more efficient ones. Even
>at

>fuel at $1.50/gallon. Doubling the MPG to 30 saves only $750/yr.

Well, since September of 2000, I've been driving a vehicle that gets up to 40 MPG -- city and highway *average!* I, for one, am perfectly happy to not be shelling out twice the gas money my old '91 Taurus was consuming!

>How many SUVs do you see on the road being used as commuting vehicles, with >just one person in each? How many of them NEVER go off-road? Where is the >outrage?
>
>The USA could reduce or even eliminate our dependence on imported oil by >adopting more efficient transportation. We could have efficient surface >transportation systems that would make the Euros look shabby. But it's not >fashionable here yet.

Ordinarily, I'm against taxing things for the sake of taxing them, but I think I
could make an exception for the smartly-dressed woman driving all by her lonesome in a Lincoln Navigator I saw today. I think that she, and others like her, should have to swipe her credit card in a slot just to open the door of the damn thing! She wasn't getting anywhere any faster or with any more safety or comfort than she could in a Lexus sedan which costs the same money and gets twice the fuel economy! When people make stupid choices, they should pay out the nose for the privilege!

Rick:

It would be interesting if the ARRL would conduct a poll, in QST and/or
their website, to find out just what hams really *do* think of the
availability of callsigns that spell out certain words of a sexually or
scatologically implicit nature.

> Personally, I don't find it the least offensive--on the other
>hand, I'm not a prude.

Then fear not -- your liberal credentials are fully intact. I'm sure
nobody will accuse of being "closed minded." Just remember --
an open mind is usually caused by an inability to think
independently of the crowd you wish to follow.

>>I'm sure that kind of thing happens, but since I know how to use CW and a

>Dave K8MN

Dave:

Precisely, and that point is reached when our behavior as hams causes
potential newcomers to be turned off by people who choose to exercise
their "right" to offend others. This permissive attitude has brought us a
generation of young people who don't possess the words "please," "thank
you," "Sir," or "Ma'am" in their vocabularies, who assail our ears with
loud, thumping noises emanating from their automobiles, and who
believe that the hard working people of the world owe them a living
while they suckle at the "teats" of the Welfare State. Kim's callsign is
nothing more than another example of the social degradation brought
about by so-called "liberal" thought…but I don't call it that. I just call
it selfish, wrong-minded thinking.

Sean:

We've already been through the "teat" vs. "tit" evolution in this thread,
so there is no need to bring *that* up again!

The "big fuss" is exactly as stated in Riley Hollingsworth's original
commentary on Kim's call sign -- occasioned by her attempt to get him
to endorse it. For those who have not seen it yet, or lately, here it is:

(start of quoted message)

Subject: Riley sez Kim taking the ARS "One step closer to extinction"
From: yodoc@aol.comnospam (Larry Roll K3LT)
Date: 08 Jun 2000 14:37:47 GMT

In article <59B7203A07395FF0.50F2CC864D4ED7FE.54A4CB093D32584C@lp.airnews.net>,
"Kim W5TIT" <kw5tit@hotmail.com> writes:

>
>Probably more a thoughtful wish of the prefix I wish I'd been able to get.

Kim:

Huh? This was even harder to decipher than your usually indecipherable writing. Anyone who has survived elementary school grammar should know it's best not to use a word like "wish" more than once in a sentence -- particularly if it can be used as either a noun or a verb. This causes confusion. However, since confusion seems to be your normal state, I guess you think you can get away with it!

>Speaking of callsigns, here's Riley's response after I wrote and told him I
>was sorry for bothering him, since the FCC had already spoken on callsigns
>at the Dayton Hamfest (the rest of the email is also with it):
>
>While that's true, just because a person has a right to do something doesn't
>mean it's right to do it on every occasion. While the call sign may fit the
>constitution, for every instance where a parent or uncle or grandparent
>doesn't want a young person to get involved in Ham Radio because of
>something they hear on the bands, then you have taken the ARS one step
>closer to extinction. Then we can sit around and debate what happened to
>all those Amateur frequencies that industry bought at auction---debating, of
>course, on the internet and cellular because that'll be all we have left.
>The first amendment will still be alive and well, just as it is now, tho, if
>that's any consolation.

Interesting. Sooo, Kim -- are you going to change your call sign voluntarily, or are you going to, as Riley said, continue to take the ARS "one step closer to extinction?" Think about it!

Years ago, I would have fought tooth and nail to preserve every single kiloHertz of ham radio spectrum. However, because of the proliferation of so-called "hams" like you, Kim, I now support the concept of wholesale re-allocation of amateur radio spectrum to commercial broadcasting and utility communications services which can make much more productive, profitable, and socially beneficial use of it! As hams, we've blown it -- big time -- and you, your attitude, and your callsign are the best and most readily available example of every bad thing ham radio has become!

Sooo -- enjoy your callsign. The FCC won't force you to change it -- that is something that can only come from you -- should you decide to become a Real Ham and stop giving the rest of us a bad image! I have complete confidence that you can change if you want to -- but the action to do so must come out of your decision to do what's right for people other than yourself.

73 de Larry, K3LT

(end of quoted message)

So, as you can see, the problem with Kim's callsign is the fact that it deliberately detracts from the overall good, positive image of radio

amateurs -- and degrades it's intended nature as a family-oriented activity suitable for young children as well as mature adults.

Don't get me wrong -- I'm certainly not any kind of Victorian prude. I know that there are certain nets on ham radio which are best left to mature participants, but again, like Kim's callsign, to the extent that the existence of these nets cause people to retreat from the amateur radio service, they are also taking the ARS "…one step closer to extinction." To paraphrase Mr. Hollingsworth, we need to decide whether we, as radio amateurs, have the maturity to conduct ourselves as hams in a conventionally dignified manner, or whether we are going to indulge our need to attract attention to ourselves in the manner Kim has chosen with her callsign. The former gives a positive, attractive image of ourselves as hams and of the ARS in general. The other is quite often found to be repugnant, and discourages participation by otherwise interested people, whose participation could have benefited themselves and the ARS as a whole. What we lose through such actions cannot be known for certain, but the potential for that loss would not exist if people like Kim would comport themselves in a more responsible manner.

GADS...he's hilarious. "Comport"? You mean as in act the way *you* want someone to act, Larry? When you agree that you are an abrasive, demeaning, bigoted individual, I might begin to consider that my "behavior" is damaging to ham radio.

Tell ya what...if you'd even get *half* serious about your statement that a callsign is going to be the end of ham radio; get the list of all people with objectionable callsigns and go on a crusade, I'll consider changing mine. Just *half* serious, Larry. 'Cause, see, I figure that your dislike of my callsign is a smokescreen for your real distaste of a woman who can think for herself and gets right in there with the best of you to shoot from the hip...so to speak.

I don't think you have half as much problem with my callsign, Larry, as you do with me. And, since you don't know me other than what you have read here, and what some dilapidated dick from Dallas might have told you, then your assumption doesn't make much sense, does it?

By the way...you're going to respond with how wrong I am about your distaste being more for me than for my callsign. OH, no you won't. What you'll respond with is that I am right, but on both counts--you don't like me *or* my callsign. Well, guess what? I don't believe it now, haven't believed it for over a year, and won't ever believe it.

I am pretty sure that most of the folks in here who have a problem with me, have a problem with any woman who can talk at your level.

Get what done? File petition/comment to delete the code test
requirement - done it. Read and summarize 2,000 NPRM 98-143
comments and prepare a report for an ex-parte presentation - done it.
Serve as a director of No-Code International - done it.

> It is
> not the first and it will not be the last time in your life you get to do

In this country, one does not need to "earn" ones constitutional right
to petition the government to delete a stupid rule like 47 CFR 97.503(a).

> I suspect you will get to wait another decade. It is not even on the
> discussion agenda for 2003.

Wrong. ITU rule S25.5 is on the agenda and will be deleted.

N2EY wrote:

> The biggest current production model I know of is the SD-90MAC freight
> locomotive.

A few days ago, driving toward home across I-40 well east of Flagstaff, AZ in a region where the BNSF double track parallels the highway, I noticed several long freights sitting, waiting, along the way. I thought that was odd, given that eliminating waiting on sidings was the primary reason for the huge expense of the second set of tracks.
Before long we came upon the reason for the delay: A huge new-looking diesel engine, I'm pretty sure a SD90, was sitting, alone, on the westbound track in a remote area with a service truck pulled up to it. Dead in the water, or on the main line, as it was. Evidently the rest of the train had cut him loose and continued on its way.
Then I remembered something I had read in "Trains" magazine some time back, confirmed by a Salt Lake City UP locomotive driver I know, to the effect that one of the big newer engines, I believe it was the SD90, had been experiencing some technical difficulties. Wasn't it a software problem? Those things are "fly by wire" too, now.
I imagine a dispatcher somewhere was pulling his hair with all the switching and jockeying he was forced to try to manage in attempting to unstack things. Got to keep those hotshots rolling, if you can.

Maybe. Maybe not. Maybe W5YI won't be able to bulldoze the ITU into adding it to an already full agenda-they aren't all that enthused over ham radio, you know, and maybe Larry et al won't be able to bluff their way onto HF until 2013.

Golly, it looks like someof you folks would find it much less hassle to just do it. Most of us did. And not at a measly 5wpm.

It -and they- are truly a lost cause. Hams without meat.(Where's the
beef???) And still, Larry & co. persist.
ITU couldn't be even modestly interested in such a non-issue (on any
true scale of importance) as a 5wpm code test for hams. Especially when
literally millions of licensees over the past century have quickly and
quietly, without comment, learned code and passed whatever level of test
their interest led them to pass, most much higher and more difficult
than the current single SLOW speed required.
It would seem to most uninvolved observers that it truly is a tempest
in a teapot. One that is most likely to brew for another decade.

The answer is doubtlessly no. If you note all the coal trains that transverse the area from Utah and Wyoming as far east as the customers are located, you soon realize that fully half of all train traffic across the nation's midsection seems to be in coal, full loads eastbound, empties headed back west.
The Thomas Hill mine in north Missouri was closed several years ago (they had built a huge power plant at the mine site) and now it burns Wyoming low sulphur coal, as does the rest of the plants in these parts.

Somebody said that taking out a railroad or two at a couple of strategic locations could sure put a lot of people in the dark and cold for a long time...

I have never comparted Affirmative Action and Morse testing so
you know what that makes you.

Morse code testing and Affirmative Action are similar examples of
social engineering, i.e. governmental requirements attempting
to get some people to do what they wouldn't normally choose to do.

You are obviously blowing smoke because I never said any such thing
nor do I believe it. I simply related the facts of what happened in
my home town and I realize and have stated before that the pendulum swing
went too far in many parts of the country. What you are attempting is mind
fornication, Dave, which seems to be the only action of which you are
ultimately capable. When you can't win an argument fairly using your
crystal ball and ESP, put the other person on the defensive by lying
about what he said. That's one approach but it is pretty obvious.

> In the mean time, your analogy between Affirmative Action and morse
> testing is just as poor as it was when first stated by you.

Actually, it is your inability to recognize Affirmative Action
and Morse code testing as similar attempts at forced social
engineering. But I would expect that from someone unable to
conceptualize "Small Southern Town, USA".

I know.

Unfortunately, the people who _don't_ have class or taste end
up attacking people like Kim who have both class and the sense of
humor they obviously lack.

Glad others agree with me that the people who are attacking
Kim for exercising her freedom of choice have no class or taste--it's
obvious, but you don't often see people willing to acknowledge it as
you did! :-)

Hmmm...The Midwest (1), the South (2), Europe (3) and Africa (4).
You seem to have a problem with your math. At no point did I claim U.S.
jurisdiction of the United States exists in Europe or Africa. Europe
and Africa are permitted to contribute to one's knowledge though.
Have a problem with that?

> >

For what purpose was an apostrophe added. My sentence conveys what I
meant it to convey.

I'm sorry but I disagree with your use of the term "qualified blacks,
hispanics, etc..." If you lower the standards for jobs, you are not
looking for qualified individuals. Your search is for bodies to put

into a job regardless of qualifications. Lowered standards say, "This guy is almost good enough for the job".

>false. I do not have to attend them and they are not in plain view.
>I don't have a problem with them. I don't feel the need to participate
>in a "swing club".

A few corrections to your comments:

1. I don't "practice homosexual activities." It's not that I
have anything at all against those practices, I simply happen to be
heterosexual.

2. Nudist clubs are _regularly_ raided by state agents who
claim that the mere act of being nude in the company of others is
"lewd behavior." In addition, widely acknowledged nude beaches (or do
you insist that YOUR moral values be imposed to the extent that
naturists should not be permitted to have consensually nude beaches
outside of organized nudist resorts?) are frequently subject to police
harassment and arrests for indecent exposure--even though no one is
likely to stumble over such a beach (usually very private in location)
accidently, and all participants consent to the nudity freely. My
information is far from false, unfortunately.

3. There are approximately 4,000,000 swingers in the USA
(defined as members of a married couple who voluntarily participate in
recreational sex with other couples) NONE of whom is permitted to
practice his/her lifestyle w/o fear of arrest and persecution. It's no
more necessary to participate in swing clubs to feel that these
individuals are victims of institutionalized morality than it is
necessary to be homosexual to recognize that laws discriminate against
individuals with that sexual orientation.

>It is not necessary to do everything not prohibited by law just to prove
>a point. The "state" is not some faceless and nameless entity. It is
>us. If you can convince enough of your neighbors that we should have
>porn palaces, nude dancing, nudist camps and the like on every corner,
>perhaps you can get some laws changed.

Again, two points to answer:

1. No, it isn't necessary to do everything not prohibited by
law. On the other hand, if something is not prohibited, people have
the _right_ to do it if they choose. Example: I don't smoke. That it

is permitted by law isn't relevant to me--I don't choose to do it. On the other hand, some of my best friends DO smoke, and I acknowledge their rights to do so just as they acknowledge my right not to do so. That's what _choice_ is about.

2. What your neighbors want is relevant to neither the state or the law. Frankly, I don't CARE if everyone in my neighborhood opposes a given behavior--if that behavior occurs behind closed doors they simply don't have a voice in the matter from any rational perspective. For example, I don't happen to care for pornographic movies--it isn't that they offend me, but I simply don't enjoy them (I don't enjoy horror films either, for that matter). But the fact that I could care less if another porn movie is ever made or not is irrelevant to YOUR right to enjoy that form of entertainment. Unfortunately, far too many self-appointed moral judges in our society insist that they have the right to decide that NEITHER of us has the right to view such films. But even if they DID support our right to do so, it wouldn't matter to the state. For example, in California medical marijuana is legal. It doesn't matter whether you believe it to be beneficial or not--it happens to be the law, a law passed by popular vote (the method you suggest above). Despite the "will of the people" however, the Federal government refuses to recognize that law as valid and continues to prosecute people who violate marijuana statutes in California, regardless of whether they do so to "get high" or because they are receiving chemo-therapy and need it to control the nausea.

>I don't care if Johnny plays with his toy soldiers. I care if ham radio
>is ruined by obscenity, racism and even Kim's *wink-wink* humorous
>attempt at adverstising her sagging assets.

That put-down directed at Kim was both uncalled for and demonstrated a total lack of class. For someone who opposes even a hint of sexual humor in amateur radio, you're remarkably willing to bring both offensive insults and your own brand of sexual humor to an amateur radio newsgroup. Care to explain why something offensive on the air isn't equally offensive to the vastly LARGER audience of a Usenet newsgroup?

If you're concerned with cleaning up ham radio, start with the racist groups on 80m and follow that with the garbage that periodically surfaces in the lower end of 10m and on 2m instead of wasting your resources picking on a woman whose only "sin" is to have a far better sense of humor then you yourself demonstrate.

BTW, what makes you think Kim's assets are "sagging?" The economy is quite "perky" lately, if you haven't noticed.

>Freedom in our society has limits. That you don't like the limits
>imposed by the society is too bad. We are not an anarchic state.

No, FREEDOM does NOT have limits. By definition, freedom is
the ABSENSE of externally imposed limits.

The limit is very simple to find in practical life, however.
Ask yourself if a given act directly harms the person or property of a
non-consenting individual. If it does, it should not be permitted. If
it doesn't, it simply isn't the concern of society. Perhaps that would
lead to some offensive behavior--but if you can identify a single
consensual behavior more offensive than the self-righteous attitude of
America's moralists you're doing a lot better than I can do.

>Your premise is ridiculous.

No, my premise is realistic.

>I don't attend church in the public square. I attend church in a church
>building. Don't like it? Don't show up. No fair peeking in the
>windows either.

Ok.

Now tear down those public displays of a nativity, stop
printing "In God we Trust" on my money (my religion doesn't BELIEVE in
a god), don't teach my children to sing Christmas carols in public
schools, stop trying to take freedom of choice from women by imposing
your religious views of abortion on the law, insist that your church
pay taxes (including property taxes) like the rest of us have to do,
and stop handing out bibles on public school property, among other
actions. You claim your church doesn't force itself on me--tell that
to someone who believes it.

>Nope. You misundertand. If you actually use your secret callsign, it
>won't be a secret anymore. It'll be just for you. Enjoy it in private.

Brilliant.

I'll bet in private you have some really neat names for
yourself, too.

Come to think of it--I'll bet that in private a LOT of people
in this newsgroup have really neat names for you, too.

>The fact that I'm responding to your post demonstrates my sense of
>humor. Not all humor is written on a restroom wall.

Funny--some of the insults being made about Kim's call sign
certainly sound like they belong there to me.

>Trashy is as trashy does. Water seeks its own level.

So drown. We'll wave from the shore.

Nobody said it was, Jim. But if test A and test B have to be passed
for a license, then they are logically equal in importance.
A AND B = one AND one = one = license

Actually, the debouncing is done virtually 100% in software.
I wrote a lot of that original 8049 software.

Of course I did not. Further, I could care less how many traffic lights
or how many more cracker philosophers are to be found there.

When the other person changes his tale so often in order to attempt a
win at an argument, that person's tales become suspect. You've been
guilty of it in the past and you are guilty of it now. It's all the
more peculiar because the issue was not what was accomplished by
Affirmative Action. It is your faulty comparison of morse testing to
the Affirmative Action program.

> > In the mean time, your analogy between Affirmative Action and morse
> > testing is just as poor as it was when first stated by you.
>
> Actually, it is your inability to recognize Affirmative Action

> conceptualize "Small Southern Town, USA".

Cecil. Get a grip on yourself. If you are speaking of your town
because it is the only place you really know, say so. If you are
attempting to tell us that your Texas town is like every place in the
South, I would say you don't have a large enough statistical base.
That aside, this is simply a diversion from your original faulty claim.

Here's your bold-faced lie from Google:

"The Great Society was filled with affirmative action programs.
Morse code testing is an affirmative action program."

You may now eat your words.

wrote:

>It would be interesting if the ARRL would conduct a poll, in QST and/or
>their website, to find out just what hams really *do* think of the
>availability of callsigns that spell out certain words of a sexually or
>scatologically implicit nature.

Why?

If we conducted a poll that showed the majority of the hams
believe that racism is acceptable, would that make it any less
offensive or inappropriate?

Sorry, Larry, but "majority rule" often turns into the tyranny
of the majority instead.

>Then fear not -- your liberal credentials are fully intact. I'm sure
>nobody will accuse of being "closed minded." Just remember --
>an open mind is usually caused by an inability to think
>independently of the crowd you wish to follow.

Was that supposed to make sense?

Are you _seriously_ suggesting that holding an open mind means
you are following the lead of others while having a closed mind means
you are impervious to that effect?

No WONDER you prefer cw--it's easier to disguise the fact that
you don't know how to use the English language in a meaningful manner.

>Not in my own personal experience.

I suppose even on cw people are choosey about who they
associate with. I guess that pretty much limits you to exchanging
signal reports and discussing equipment, doesn't it?

>Could be. The one I belong to is regulated by the FCC, and represented
>in the United States by the American Radio Relay League. To which one
>do you belong?

The one run by a nation with a Constitution that guarantees
freedom of speech. Sorry that yours doesn't.

>I thought it was my right to do so! Are you now saying that it isn't? If so,
>are you trying to control my speech just because I'm saying something
>with which you don't agree? Perhaps, then, I should refer to you as
>"Comrade Rick?"

You have every right to say what you like Larry--even though what you are essentially saying is that Kim should NOT have the right to say what SHE chooses.

Must be confusing to be so hypocritical!

BTW, forget the "Comrade Rick," I'm a libertarian, not a communist--I believe in personal liberty not "sacrifice of rights for the betterment of society."

Hmmmm . . . sure sounds a lot more like your credo than mine.

>So, my objection to Kim's callsign, which is my right, makes me a
>"self-righteous prude?" Hmmm. Well, I guess I've been called
>worse things!

And probably deserved them, too.

But--clearly--if you feel as innocuous a thing as her sign is offensive and shouldn't be permitted, you are demonstrating prudery in no uncertain terms. You have a right to do so, of course, just as I have the right to ridicule your treatment of a lady on this list (you talk about the image of amateur radio she creates with her sign--what about the image you give prospective hams here in rrap???), but then again I _do_ support your rights to free speech--it's too bad you don't share that value when it comes to Kim's rights as well as your own.

>No, because her callsign, and the attitude it represents, offends the
>standards of behavior characteristic of a society based on politeness,
>consideration, and respect for ourselves and others.

What country is that?

Our standards in this nation emphasize freedom of speech, freedom of choice, freedom of association, . . . Get the picture? Not restraints imposed by society--FREEDOMS expected by it.

Kim exercised her freedom of choice. That's her right. You exercise yours when you oppose that choice. But don't pretend you represent the values of today's society--you don't.

>If you have to ask that particular question, you would never understand
>the answer.

Why--couldn't you present it in an understandable manner?

I copy cw at a reasonable speed, Larry, why not try answering it in that if written English is too difficult for you.

>Hmmm -- the "morality police" vs. the "immorality Taliban." Now, that
>would make for an interesting battle, indeed!

Sorry, Larry, but one of the worst things ABOUT the Taliban is its extreme commitment to religious morality. Women in Taliban governed Afghanistan were not permitted medical treatment, to appear

with their faces exposed, rights, citizenship, etc. BECAUSE their religious beliefs taught that such behaviors are immoral. To me, you and the fundamentalist Christians have a LOT more in common with the Taliban or the Iranians than you do with civilized societies.

Dave, you used the word "comparting", not I. the definition of "compart"
is "to subdivide". I did *NOT* subdivide Affirmative Action and Morse
testing so you are just lying through your teeth. I expect an apology.

How you can deny reality is beyond belief. Why even have a
governmental requirement for something that doesn't need to be
social engineered?

So you deny that Morse code testing is an attempt at social engineering?
Dave, virtually all governmental requirements are an attempt at social
engineering. Last time I checked, Affirmative Action and Morse code testing
are governmental requirements.

Of course you did, Dave. Otherwise, you wouldn't still be arguing
about it.

> When the other person changes his tale so often in order to attempt a
> win at an argument, that person's tales become suspect. You've been

You're absolutely wrong if you think I've "changed my tale". The truth
is that you didn't comprehend what I was saying at first. Now it
has finally started to soak into your concrete brain and you are
trying to blame me for your lack of comprehension.

> If you are speaking of your town
> because it is the only place you really know, say so.

I said so, Dave, and you accused me of lying. You just were not paying
attention as usual. But my home town is typical of small towns from
Georgia to East Texas. When the students were integrated, the teachers
were not. Forced integration of the faculty caused a lot of competent
black teachers to obtain positions at the expense of incompetent
white teachers. The average quality of teachers improved. After all,
my black teacher friend had a 3.8 GPR but you apparently agree with the
white majority around here that her skin color lowered the standards.

The word you want me to eat is "compart", which is your word,
not mine. "Compart" means to subdivide. You said I was "comparting"
Affirmative Action and Morse code testing. You are lying!!! I defy
you to prove that I subdivided Affirmative Action and Morse code
testing. There is absolutely NO subdividing in my statement above.
Now exactly who do you think should eat your word?

How 'bout research is conducted on just one important facet of amateur
radio; that of emergency communication. My money is on the idea that there
are at least 50% of hams who are in emergency communication that are "hams
without meat" as you say.

Why don't you tell *them* and the public they serve that they are "hams
without meat?"

Some zealots just don't realize what makes up our society, Cecil. How many times have I degraded the KKK and other such groups on this newsgroup and not one word of agreement or acknowledgement has ever been expressed? In what way should I take that lack of response? That my tits are more of a danger to society than thoughts such as promulgated by groups like that?

Larry doesn't think there's anyone who is offended by what he
says...although it is darned hard to take someone like him seriously...

I'd like to know where in the constitution that it says that one has a right
not to be offended.

You, and a few others of minority opinion, are the only ones who are turned
off.

> their "right" to offend others. This permissive attitude has brought us a

> guy is almost good enough for the job".
>

And, I disagree with your premise. And here's my direct correlation between your concept above that the Affirmative Action "lowers standards for jobs" and the idea that relaxed CW testing lowers the standards in ham radio. You believe that without Affirmative Action in place, there is an even playing field among all participants for a job. You probably also figure that with strict CW testing for ham radio, there is an even playing field among participants for ham radio. Conversely, without either, you believe there will be a predominance of people who are not qualified for their jobs, and you believe there will be a predominance of hams who are not qualified to be hams, respectively.

I disagree with your assessment. I believe that without Affirmative Action, there is *nothing* in place that evens the playing field and there is *nothing* in place that keeps an employer from making decisions based on the protected classes. Every day, I witness lazy blacks, whites, hispanics, etc., that aren't doing their job while other blacks, whites, hispanics, etc., bend over to do double the duty to make up for them. However, I believe that without Affirmative Action, I'd be looking at mostly whites doing the same thing.

Likewise, in ham radio, everday I witness hams all the way up to Extra Class hams that have no business in the hobby, while I can hear new hams who are disgustingly more "profeesional" at their hobby than many. And, that was the case prior to and post- CW testing relaxation.

I think the analogy is quite obvious.

> 2. I pointed out that the reduction of morse speed in testing is akin
> to Affirmative Action.
>

Well, I approach it from either way, whether you believe to strictly test is
the Affirmative Action or to relax tests is the Affirmative Action, you both
believe that the CW testing issue is akin to Affirmative Action.

> 3. Cecil is wrong.
>

I am with Cecil's train of thought. There are others who are on your train
of thought.

> 4. You aren't really sure of what has been said but you like to make a
> comment based on your feelings.
>

Is that directed at me? Dave, maybe you run around like a geek with all
kinds of figures in your head (though, I'd find that hard to believe). In
my opinion, *MOST* people make comments based way more on feeling and
observation than anything else. Additionally, I can find research to debunk
any claim to research you find and vice versa.

> > Kim W5TIT

Since you may have some facts and figures, Dave, just how many whites--as opposed to other ethnicities--*were* sent to Viet Nam? I don't think Affirmative Action was in place back then, was it?

Did you take *that* person to task for his/her actions? Why do you make *me* the target of your anger for that person's actions? That person was the same prior to hearing or seeing my callsign. Kids who "understand" my callsign must *know* what tits are before they hear my callsign.

Here's an analogy for you: if you are angry at me for my callsign because of some nitwit who acts like an idiot but supports my callsign; would you also make the same differentiation between someone who is Muslim and that it is *their* fault for the WTC?

Just stating an observation, Larry. Do you think that what's legal is always
good for society? How about the opposite - is what's illegal always bad for
society?
>
I have opinions about what is good and bad for society. Is having those
opinions, and expressing them, bad for society?

shared these priceless pearls of wisdom:

->>> Now I am really confused. The graticule markings on the screen are the
->>same
->>> across the entire screen
->
->>Uh, you can't see those smaller boxes in the center part of the screen? Time
->>to get a new pair of specs, Ed!
->
->Oh, those. I guess I didn't consider them as contributing to the
->misunderstanding at hand or capable of causing a 2:1 error in reading the
->results. :-)

Well, Ed, those are every bit as much a "division" as the outer "divisions". If you are looking at center-screen to figure out the illustration, then those are your reference lines and a source of misinterpretation. I maintain "ms/cm" would have probably been a bit more informative.

And I maintain that asymmetric on-off keying times would aid the situation greatly.

Guess you need to keep them restrained, Kim, to protect society.
Reminds me of a KFAT song called "Oh S--t, Would You Look At Them Tits".

It's not needed. Being offended is a personal choice. Every person
uses his/her free will to choose to be offended or to choose not
to be offended. Proof of this can be seen if something "offensive"
is spoken in a language that the "victim" doesn't understand.

Well, let us see. The National Foundation for Infantile Paralysis changed its name to the March of Dimes and because it would be a shame to dismantle a successful organization and took on birth defects which even if they could be defined are not likely to be conquered in the lifetime of the people drawing paychecks. When the planning for the Bi-Centennial in 1976 began it was found that the Centennial Commission from 1876 was still in business. Hell it took until 1848 to put the Holy Roman Empire to sleep.

I don't seriously believe that any organization can be eliminated except by its creditors.

Is that really so surprising in a society that prohibits teens
from seeing consensual acts of love but inundates them with warm,
caring, movies such as the Texas Chainsaw Massacre?

Our culture is terrified of pleasure--it keeps them from
wallowing in pain and punishment instead.

No, it means you never overcame bad teaching. We have produced gazillions of poor readers by making kids read out loud; but how else is Teach going to know? I remember nothing of some of the grammar school stuff, mostly Longfellow as I recall. But I will quote you a lot of Kipling whom I discovered in the Nam era. There isn't an Engineering student alive who cannot relate to McAndrews Hymn, everyone should really read the White Man's Burden (Take on the White Man's Burden, send forth the best ye breed, go bind your sons to exile, to serve your captive's need), nor a soldier who might not remember "And it all goes into the laundry, and never comes out in the wash, how we're sugared about by the old men, - heavy-sterned amateur old men-, that hamper and hinder and scold men, for fear of Stellenbosch'. Just as Schwartzkopf sent yo-yos coming to Saudi to get their combat tickets punched to a ship in the Indian Ocean, the Brits sent incompetant officers to Stellenbosch during the Boer War.

Now I aren't no hand with the ladies,
For, taking them all along,
You never can say til you you've tried em,
And then you are like to be wrong.
There's times when you'll thing that you mightn't,
There's times when you'll know that you might;
But the things you will learn from the Yellow and Brown,
They'll help you a lot with the White.

I've taken my fun where I found it,
And now I must pay for my fun,
For the more you have known of the others,
the less you will settle to one.

And the end of it's sitting and thinking,
and dreaming of Hell's fires to see;
So be warned by my lot (which I know you will not)
And learn about women from me.

What did the Colonel's Lady think?
Nobody never knew.
Somebody asked the Sergeant's Wife
and she told them true.
When you get to a man in the case,
They're like as a row of pins --
For the Colonel's Lady and Judy O'Grady
Are sisters under their skins.

Your loss, Mr. Casey. Be an uncultured clod if you wish but don't blame
your grammar school teacher for making the effort.

Dick, N&#65533;BK

In my days of high school, one year of Latin was a prerequisite for taking any other foreign language, even if you wanted to take German. Pro-coders won't see this parallel, but those things are hard to see when you have tunnel vision.

That's about right, for there IS NO parallel.

CW phobics never understand that radiotelegraphy is the most basic of
all radiocommunications modes, eminently useful even in the high tech
age. Just ask any moonbounce or coherent operator.

I didn't invent any of this, I just tell it like it is.

Blaming that on some kind of racial conspiracy is ignoring the reality of the situation at the time, Cecil. The teachers of the time (black and white) had homes near their schools and had little desire to be bused around like students were. Likewise, there were not enough teachers available to just start firing teachers in a given area to replace them with the "proper" racial mix. Of course, none of that really mattered because the stated goal was to integrate students, not teachers. In time, the teachers would become just as integrated through attrition and new hiring. And, indeed, in most areas of the south today, the teachers are just as integrated as the students.

However, that is certainly no defense of affirmative action today. Affirmative action is now causing more problems than it is solving. Few school boards are willing to end affirmative action hiring when it results in accusations of racism. Because of that, affirmative action hiring continues in spite of a disproportionate representation of minority teachers in many schools. In the end, it appears affirmative action hiring will continue, never ending, until there is not a single non-minority teacher in the entire school system.

When the balance exceeds 50%, the "white" teachers become the
minority.

You have lost your few brain cells. I never used such a term.

I did *NOT* subdivide Affirmative Action and Morse
> testing so you are just lying through your teeth. I expect an apology.

You'll get none from me. I never accused you of subdividing anything.
What you did was say that morse testing was an Affirmative Action
program.

So is paying your taxes, Cecil. I never spoke of social engineering.
What I said is that morse testing is certainly not like Affirmative
Action...and it isn't.

I don't even know that you had a black teacher friend, Cecil. I've grown accustomed to your tales. Skin color lowered no standards. White law makers legislated lowering of standards in order to meet racial quotas. I'm surprised you hadn't heard. It made all the papers.

I'm talking about Madisonville, Texas, Dwight. The whole town is
only four square miles. From anywhere in town to any school is
five minutes or less. The 100% white school board would have
never hired a black teacher for white students if they could
have gotten away with it. If it were legal, they would happily
go back to segregation tomorrow.

Hams who sound "digustingly more profeesional"? Gee, this entire time,
I believed I was a participant in *amateur* radio. If you wanna go pro,
hit broadcast school or become a police or taxi dispatcher. Your
statements are predictably subjective and completely unsubstantiated.

Try to pull the scales from your eyes and see that reducing code speed
in morse testing is really like Affirmative Action. It lowers the
standards.

> > 2. I pointed out that the reduction of morse speed in testing is akin

We certainly do not both believe that morse testing is akin to
Affirmative Action. If you'd bothered to read previous posts, it would
have been quite clear to you. As to "I approach it from either way":
Phew!

> > 3. Cecil is wrong.
> >

I went. I'm white. I remember seein' a lot of black folks there but we
outnumbered 'em. Maybe if we had Affirmative Action back then, their
numbers could have been increased. You and Cecil would have been
pleased at the increased job opportunities this would have provided.

Perhaps you care to indicate what possible effect any of this will have
on amateur radio. Before Cecil's diversion factory cranked up, all we
had going is my disagreement with him over his comparison of morse
testing and Affirmative Action.

Here's an answer for you: We're not talking about Muslims or the WTC.
We're talking about your unfortunate decision. I wouldn't elevate your
situation to the status of current world events. We're dealing with
terror, not tackiness.

I would be stupid to try to speak for the entire South, Dave. I know what
my area is like and it is my personal opinion that it is typical of small
southern towns from Georgia to East Texas. I have seen no evidence otherwise.

You posting the following sentence. You are a bold-faced liar when
you say you didn't use the word "compart" which means to subdivide.

> > > > > I'm calling you on this diversion from your original erroneous comment

> You have lost your few brain cells. I never used such a term.

How can you possibly deny using such a term when it is marked in evidence
in your earlier posting above? It's just one more of your attempts to deny
reality. How can you give yourself permission to lie when it is obvious
to everyone who sees your earlier posting above that you are lying?

> I did *NOT* subdivide Affirmative Action and Morse
> > testing so you are just lying through your teeth. I expect an apology.

That's a lie, as proved by your posting above. "Compart" means to
subdivide. Are you so far gone that you cannot tell the truth?

Pick up a good Almanac, Kim. They are perfect for this type of thing.

Anyway, during the Vietnam War (Aug 64 - Jan 73), 8,752,000 Americans served in the armed forces, with 58,193 deaths. Of those numbers, 247,937 were African Americans, with 5,681 deaths. In other words, only slightly more than 2.8 percent of the soldiers serving during the Vietnam War were African American, with those accounting for slightly less than 9.8 percent of the deaths.

During the same time period (Aug 64 - Jan 73), African Americans accounted for about 11.1 percent of the U.S. population. In other words, African Americans served, and died, in numbers far less than their proportion to the total population.

By the way, the other two major minority groups at the time (Asians and Hispanics) each accounted for less than one percent of those serving, and of the deaths.

Izzat what you call porn movies--"consensual acts of love"? You should
be defending the public's right to view The Texas Chainsaw Massacre
types of film. After all, they aren't illegal and no one is forced to
watch them.

> Our culture is terrified of pleasure--it keeps them from

> The truth is that *YOU* didn't understand what you were saying.

Of course, you never make a mistake, are always right, and the
rest of the world is always wrong. You are omniscient so you
always understand everything. OTOH, I am a mere mortal but I
indeed do understand what I am saying which is that Affirmative
Action was not all bad and did allow competent black teachers
to replace incompetent white teachers in this area of the USA.

> You do not live in a place called "Small Southern Town, USA".

Madisonville, Texas is indeed a small southern town in the USA
typical of small towns all across the South. That you are incapable
of conceiving of such an abstraction is your problem, not mine.

> I don't even know that you had a black teacher friend, Cecil.

OH!!!!?????? Admitting that you are not omniscient? Up until now,
you have implied that you know everything about me and my home town
and I am wrong about it even though I live here. Truth is, you don't
know a whole lot about me, my home town, and what happened in Small
Southern Town, USA.

My black teacher friend's name is Viola Taylor. She and I graduated
from high school in Madisonville in 1955 but we didn't know each
other until we went to Sam Houston State Teacher's College
together. I could get a teaching job in Madisonville but
she couldn't in spite of being more qualified than I.

Incidentally, I was glad to see the incompetent white teachers
go. The Madisonville school system is now top rated among
schools in its league. Reckon how that happened?

It would, to you. That's because you want to see it that way. On the other hand, I didn't choose that Dick is the most commonly used nickname for Richard. And Kim *DID* choose to advertise her grossly overly ample anatomy via her titillating callusing.
Yes, that's right - some people-in fact many people, regard all that as unpleasantly excessive, especially when the bearer flaunts it, and it's not really that attractive that it should be flaunted in the first place.
Anyone with sufficient behind-the-scenes experience will already know that. It's illusory.

Yep- Read all about it right here...Something I posted on another venue
I'll repeat here.

September 11 will prove
to be a turning point, the point at which I believe Western civilization
will have begun to back away from the concept of "freedom of religion".

I say this after doing a bit of study on the basics of the religion
of Islam. Those basic tenants include *total* lack of tolerance for
other
beliefs. Islam is both "THE" religion and the functional government. The
superiority of Islam is fundamental. There is no room for any other
belief system, anywhere on earth. All others are to be treated in one of
three ways -

They must be (1). Converted to Islam, or they must be
(2). Subjugated, (enslaved) or they must be
(3). Eliminated - That means killed,(except for women,
children and slaves).

Islamic law (which is at once the religious *and* civil law) dictates these actions to all who believe in Islam. These actions are *not* optional, they are divinely ordered to *all* who will follow Islam. "Jihad" is the term often used, but it is an all-out holy war on non-believers, nonstop, forever, or for whatever length of time it takes for it to be won. For Islam. Believers are obligated to offer their own lives to the cause without reservation. This is for real. Delays, of whatever length, are only temporary. The war WILL go on, till it is won. Allah says so. As a Believer, you have no choice.

So how, then, does a civilization (ours) which in basis depends on freedom of religion and separation of religion from government, begin to deal with a religion whose principles dictate the destruction of the very system which promotes tolerance of it? How can that "religion" be allowed to prosper and spread, without causing the complete destruction of the free system that nourished it? Is "religous freedom" to include a religion which dictates the destruction of all other forms of religious belief?

Here is an interesting and very revealing book on the subject:

"America, Oil and the Islamic Mind", by Michael Youssef, Ph.D, Zondervan Publishing House (Division of Harper-Collins) 1983,1991. ISBN 0-310-75521-2 (135 pages, available in paperback)

Youssef, a Christian, grew up in the Middle East and has many valued Islamic friends. His review of the relationship between the Islamic and non-Islamic worlds is very revealing, and I must say in light of Sept 11 and
subsequent events, also very chilling. (Note that the book was written long before these current events).

Youssef writes as a devout practicing Christian who believes that Christianity can overcome the sinister Islamic point of view, but I found the book to be striking for its descriptions of the basics of the Moslem viewpoint and the makeup of the Islamic world both historically and in this era. And I must say that I cannot share his optimism. I wonder if he retains it himself in view of recent events.

We'd better get used to some dramatic changes in the way we think about the world around us. There are half as many Islamics in the world as Christians. They are taught from infancy to generally hate and despise us, that we are wholly inferior, and to either change us or else eliminate
us, while we preach tolerance of them and their beliefs.
It may prove to be quite a contest. Especially since a great many Islamics view their huge oil reserves as divine proof of the rightousness
of their cause, and they have also invested huge amounts of surplus oil cash in the West, particularly the USA.

Someone who chooses a callsign of W5TIT finds it hard to take anyone
else seriously? Whatta gas! That's a part of what you did - trivialize
the entire ARS system. I sure hope you don't expect to be taken
seriously in ham radio circles, any of them.

No, because they view it on percentage of total population, not teacher numbers. That is the gross inequity of affirmative action, it never is satisfied.

Dick, if a single cute call sign can "trivialize the entire ARS
system" then the ARS was trivial before the call was issued.

With all due respect, Dick, bullshit. Islam created the greatest single civilization this world has ever seen from the southern Philippines and the Indo-Chinese border area to Spain from about 800 to about 1300 AD. Most of the major stars in astronomy are Arabic-named, our number system is a theft from the Persians who stole it from the Hindus. Members of other religions including Christians, Jews, and many others including honest-to-goodness Samaritans lived quite peacefully in Islamic-ruled areas for centuries including Orthodox monasteries and the Christian shrines in Nazareth and Bethlehem among others.

There is a pretty good argument that Saladin & Co were the only civilized people at the Crusades but the western kings dragged home such things as

business law - equity - from Islam that as it did for them made the English-speaking world the commercial masters of the planet. They also took home the Greek manuscripts that started the Renaissance and later the Protestant Reformation. Spain hasn't been worth a shit since expelling both Jews and Moors in 1492 while bankrolling a self-serving nincompoop named Columbus.

It started to come unglued with the Marmalukes and two waves of Turks who, among other things, outlawed printing. European colonization didn't help a bit and the establishment of Israel was in a lot of ways the last straw. So yes, the extremists are in control and as Mohammet was a bit of an anarchist as well as a bathing fiend there is no central authority to call the various offshoots of Wahabbism wrong. The Islamic law is no more binding than the rabbinical one in Leviticus is on Israel. But yes, they have their troubles with the God Squad as well.

Far from leading to some sort of culture war, it is more likely that Islam is about to go into something resembling a reformation to get a handle on its more extreme interpretations. Remember please we have Southern Baptists over the slavery issue, we have churches with more interpretations than preachers. By subdividing the territory beyond the Shia-Sunni split which resembles the SLC-Independence split in the LDS BTW it can be made more certain that no one speaks for God and secularization can take place. This is really what the Reformation did for the Christian world.

And with any luck, a follower of Islam will make the necessary acts his faith requires by himself and in small congregations while life continues. I give them far more chance of pulling it off than the Israelis have of dealing with the Hassidim.

Dave:

Soooo...now Cecil is a "minority wannabe?" Or does he just think he can win
friends and influence liberal people by "anti-white man" stories? I'm sure
Cecil
thinks that white men are the worst evil ever inflicted upon the face of the
Earth,
and is dreadfully sorry he was born one himself. Never a mention of how
Affirmative Action has been used as a legalized form of reverse
discrimination,
and has ruined the careers of untold numbers of qualified non-minority
professionals in order to make opportunities for people who merely show up

for the interview, but later on, hardly ever show up for work!

I believe in Equal Opportunity, not equalized outcomes. Affirmative Action is nothing more than another way liberal, socialist politicians keep themselves
in power by pandering to the lowest common denominator.

You can replace "Islam" with "Southern Baptist" and the same thing is
true. Southern Baptists believe that Catholics and Mormons are going
to hell along with all other religions. Catholics are the terrorists
in Northern Ireland. The terrorists who bomb abortion clinics and
murder abortion doctors are invariably fundamentalist Christians.
Their crimes differ only in magnitude, not in kind, from the
Muslim terrorists.

The great majority of Muslims are no more lunatic fringe than the
great majority of Southern Baptists. They are just another
fundamentalist religion in the US. By condemning all followers
of Islam, you are just another biased collectivist, filled with
and spreading evil and hate, i.e. a psychological terrorist.

AMATEUR RADIO NEWSLINE(tm) REPORT #1266 – NOV. 16, 2001

Amateur Radio Newsline report number 1266 with a release date of Friday, November 16th, 2001 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio operators respond to a plane crash in New York City and Russia says “No” to No-Code. These stories are first on Amateur Radio Newsline report number 1266 coming your way right now.

(Billboard Cart Here)

RESCUE RADIO: HAMS HELP IN AFTERMATH OF NYC JETLINER CRASH

Ham radio operators in New York City, still weary from the aftermath of the September 11th terrorist attacks were called out once again. This, after an American Airlines jetliner in route to the Dominican Republic broke up in flight shortly after takeoff from Kennedy Airport. The Airbus A-300 had 265 passangers and crew. It crashed moments after takeoff setting homes ablaze on thrr Rockaway penninsulia. There were no known survivors. We have more in this report:

--

When American Airlines Flight 587 crashed just minutes after takeoff from Kennedy Airport in New York City on November 12th, the Salvation Army was one of the first groups to arrive at the disaster scene. It brought in several mobile canteens to help feed rescue workers and residents whose houses had been damaged or destroyed.

The Salvation Army regularly uses ham radio operators in its SATERN network to maintain communications between its units at a disaster site. This being the second disaster to hit New York in two months' time, the Salvation Army Incident Commander asked the SATERN disaster command operator, Carlos Varon, K2LCV,to request additional ham volunteers. Operators were needed to staff the canteens and a mobile command post.

Initially up to a half dozen ham stations were to be set up at various locations near the crash site and another at Salvation Army Headquarters in Manhattan. It was anticipated that the communications mission would last three to four days.

Also, according to ARRL New York City and Long Island Section Manager George Tranos, N2GA, the League's Amateur Radio Emergency Service was on standby for the American Red Cross. Hams were later reported as providing communications support to the Red Cross for its operations.

But getting to any assignment was not easy. New York officials initially feared this was another terror attack and put the city into a near lock-down, closing all airports, bridges and tunnels for several hours after the crash. In addition, the crash site itself was on an island, and access to the area was severely restricted. All this made it difficult for ham volunteers to reach their assignments. Finally, they were all told to gather in one place where they would be escorted in by a Salvation Army command vehicle.

Among those who helped organize the ham radio response was Mark Phillips, KC2ENI, the ARR Emergency Coordinator for Queens County. The Rockaway Command station was Joseph Albertus KB2QLE and Net Control on the 147.090 MHz repeater was Michael Lunetta W2MPL.

From the offices of CQ Magazine, I'm Rich Moseson, W2VU.

--

Authorities who found the flight data recorder said it contains information leading to an initial conclusion that mechanical failure of the Airbus jet was the cause of the crash. (W2VU, WB2FXN, K2VMR, N2GA, and communications monitored on the 147.09 repeater)
**

RESTRUCTURING: RUSSIA SAYS NYET TO NO-CODE

The Russian Federation has said ‘nyet’ to no-code. According to the W.I.A. Victoria News, the Federation says that there are good reasons for the Amateur Service to continue with Morse as a license requirement for operation below 30MHz. It also says that it has no plans to make any changes to its domestic licence conditions. Amateur Radio Newsline’s Roy Neal. K6DUE, takes a look at the surprise Russian position:

--

"Keep the Morse Code." That's the position of The Russian Federation. It was revealed by the International Telecommunications Union on the 12th of October, when that organization released a position document for the World Radio Conference of 2003..

The Russian Federation told the ITU that it supports most changes to International Radio Regulation S-25, which sets forth qualifications for radio amateurs. But, says the Federation, keep the Morse code. Reasons? First a strong belief that Morse testing is the big difference between Amateur Radio and the Russian version of Citizen's Radio Services. The Russian Federation also points out that lowering the code requirement in many other nations has not led to a significant increase in the number of hams in those countries.

The Federation says that it surveyed Russian radio operators and found overwhelming support for retention of the code and the Russians say Morse is one of the most effective means of communication in emergencies with clear benefits in reducing interference on the high frequency bands.

What does it mean to the rest of the world, this decision to retain Morse testing? Jim Linton, VK3PC, is the author of Australia's "Morse Code Watch."

He says the Russian Federation's position can be accomodated easily. This because any new I-T-U Radio Regulation S-25 to come out of the World Radio Conference in 2003 will set only a minimum qualification standard for radio amateurs. It will not force that standard on any country.

For the Amateur Radio Newsline, Roy Neal, K6DUE

--

As previously reported, the IARU Administrative Council voted on October 8th to support dropping Morse as a qualifying criterion for high frequency access. It says that Morse testing is no longer relevant to the healthy future of amateur radio. (W.I.A. Victoria, W5YI Report)

THE 100TH ANNIVERSARY OF MARCONI'S HISTORIC TRANS-ATLANTIC RADIO TRANSMISSION

I’m Bill Pasternak, WA6ITF, in Los Angeles, with a late breaking bit of radio history.

December 12th will mark the 100th anniversary of the first Trans-Atlantic radio transmission by Guglielmo Marconi. To commemorate the event, The Marconi Radio Club and The Falmouth Amateur Radio Association radio operators are making plans to celebrate this important historical event from December 11th to the 16th. And in this very rare recorded interview supplied by Q-News, Marconi himself commented on the his first contact across the Atrlantic pond. Take a listen:

--
Audio of Marconi commentary here. No text available. Please listen to audio newscast. Links are at http://www.arnewsline.org.
--

The signal Marconi referred to was a series of the letter S transmitted using CW across the Atlantic from Poldhu, Cornwall England to St John's, Newfoundland. For this 100th anniversary, the Marconi Radio Club will be using the call sign W1AA slash CC and will be operating from Cape Cod, Massachusetts, U.S.A.. This was the location of Marconi's 1903 Trans-Atlantic radio station. Marconi's 1903 call sign back then was "C C"

For exact times, frequencies and modes of operation for W1AA slash CC go to www.qrz.com/database?callsign=w1aa) (K1VV, Marconi Radio Club W1AA. Marconi audio supplied by Q-News)

**

BREAK 1

This is ham radio news coming to you from the United States of America. We are the Amateur Radio Newsline, heard on bulletin stations around the world, including the X-Warn repeater serving Green County Ohio.

**

AMERICA AT WAR: G3 MAY HAVE TO WAIT

It now appears very unlikely that new G 3 personal communications technology will share the same spectrum worldwide. Amateur Radio Newsline’sa Henry Feinberg, K2SSQ, tells us the U-S military has other ideas:

--

While Europe and Asia have reached accord on commen frequencies for the introduction of G 3, the September 11th terrorist attacks in New York City and Washington have convinced the Departrment of Defense to take a different position. The DoD now says that it is not in the national interest to relinquist spectrum in the 1710 to 1850 Mhz band just because that happens to be the same spectrum to be used commercially overseas.

According to the latest issue of the W5YI Report the Cellular Telecommunications and Internet Association says that the Department of Defense will encounter interference from 3 G wireless devices but the DoD disagrees. It says that whatever equipment it has is far more powerful. The DoD adds that it may interfere with 3 G cellular telephones oversaeas but that the cellphones will not adversly impact on the military or its operations.

For the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

In other words, over here in the United States, if G 3 wants 1710 to 1850 Mhz -- its going to have to wait. (W5YI Report)

**

AMERICA AT WAR: EMERGENCY CELLULAR TELEPHONE PLAN

Verizon Wireless and the United States government are in the final stages of a deal that would give some emergency officials priority access to the company's cellular network. Under the agreement, about 2,000 federal, state and local officials would be given a code that allows them priority over others trying to make calls.

The system, intended to be used only in times of crisis, would be operational in New York, Washington and Salt Lake City, the site of the 2002 Winter Olympics. Verizon has submitted a request to the Federal Communications Commission, which must review and approve some elements of the plan. According to a government official who spoke on condition of anonymity, others trying to make calls could get busy signals because of the plan. (Published news reports)

**

ENFORCEMENT: FCC TO CB OPERATOR – TIME TO PAY THE FINE

The FCC has told a mid-West C-B operator that he has to pay the price of breaking the rules. This after the agency affirms a $9500 Monetary Forfeiture issued last summer to Klaus D. Kramer of Oklahoma City Oklahoma.

--
The Klaus Kramer story goes back to last February. This is when the FCC received several complaints of a CB radio station operating with excessive power in Oklahoma City. The Dallas office sent agents to locate the source of the transmissions. In the course of the two day investigation the agents traced transmissions to three locations including Mikes Cycle Shop. The latter is a business owned by Klaus Kramer.
The agents conducted inspections that revealed that Mr. Kramer violated Section 301 of the Communications Act by operating radio transmitters without authorization. Kramer admitted to making the transmissions and voluntarily relinquished the equipment. On March 12th the Dallas office issued two Notices of Violation to Kramer. In response to the Notice's of Violation, Kramer acknowledged the violations and indicated that he would discontinue operation of the station. On July 13th, the Commission's Dallas Texas field office issued the Notice of Apparent Liability for Forfeiture in the amount of $9500 to Kramer for the noted violations. Kramer filed a response to the NAL on August 14th claiming that the amount was excessive.
In denying Kramers appeal, the FCC's November 8th order says that its Dallas office has complaints regarding similar operations on two separate occasions in March 1998 and October 1999. In both of those instances, Kramer also voluntarily the offending equipment and on at least one occasion stated that the violations would not be repeated. None the less, the FCC says that its investigation has revealed that Mr. Kramer again: "...violated our rules" in February 2001. Thus says the government, imposition of the $9500 is not excessive and is proper in this case.
For the Amateur Radio Newsline, I'm Don Wilbanks, KC5MFA, reporting.
--
Kramer was given the usual thirty days to pay the fine. He also has the option of further appeals. (FCC)
**

ENFORCEMENT: FCC TO STATION OWNER - YOU ARE OFF THE AIR

Hams are not the only ones feeling the pinch of the Federal Communications Commission action. Five Midwestern radio stations have gone off the air after the agency denies an appeal by their owner who the FCC says was found unfit to continue to operate them.

Back in 1994 the owner was convicted of crimes involving minors. He was sentenced to an eight-year term and was released in 1999 after serving five. Last July he was told by the FCC that he no longer held the minimum requisite requirements to remain a Commission license. Also, that he would lose his licenses to operate the stations within 90 days.

Last month he petitioned the FCC to allow him to continue operating the stations. The FCC denied his request on October 3rd and the stations stopped broadcasting just after midnight October 4th. The FCC says it plans to auction off the station licenses. The owner is reportedly considering an appeal. (FCC, other published reports)

**

FCC NEWS: MASS MEDIA BUREAU APPOINTMENT

Nina Shafran has been named Deputy Chief of the FCC’s Mass Media Bureau Audio Division. Shafran joins the Commission from the staff of the Dow, Lohnes & Albertson communications group where she specialized in broadcast matters. (FCC)

**

HAMVENTION UPDATE 2002: DISPELLING RUMORS

If you are one of those who heard a rumor that the Dayton Hamvention is leraving its longtime home at the HARA Arena, then forget it. Its nothing more than the normally irresponsible Internet rumor mill working overtime. Bill Pasternak, WA6ITF, has more:

--
According to planners posting to the official Hamvention website, the erroneous rumor began the week of Hamvention 2001. This, after it was was allegedly printed in a Chicago newspaper that the HARA Arena had been sold. It had not been.

The Hamvention Committee spent the weekend of the 2001 event reassuring its vendors and attendees that HARA had not been sold. Also, that Hamvention's contract had not been "bought out" and that it would be back at HARA.

But that’s not all. The HARA Arena management issued its own formal statement. It also satated that the HARA had not been sold, and that it will not be razed. We at Amateur Radio Newsline were there. We heard it first hand.

Most important the HARA folks reitterated what the Dayton Amateur Radio Association has stated. The Hamvention will be there as promised. And as those of you who received last months mass mailing already know, the dates are May 17th, 18th and 19th, 2002. We will see you there.

For the Amateur Radio Newsline, I’m Bill Pasternak WA6ITF in Los Angeles.

--

So much for the rumors on the Newsgroups and other internet gossip spots. The real story is always at www.hamvention.org. (DARA)

EMERGING TECHNOLOGY: DTV ROLLOUT UPDATE

Roughly two-thirds of commercial television stations plan to broadcast a digital signal by a federal government deadline of May 1, 2002. This, according to the National Association of Broadcasters.

In a report to the Federal Communications Commission, the industry group said that many of those that won't make the deadline are waiting for equipment to be delivered and expect to have digital broadcasts on the air in the months afterward. But some stations in smaller markets are having a hard time paying for the upgrade, the association says.

Right now, most home television sets in use receive only analog signals. But congress has mandated that broadcasters must give up their analog channels to the government by 2006. As a result, there are concerns that consumers won't have made the costly upgrade to
televisions that can receive digital signals by that date. (News release)

**
HAM RADIO IN SPACE: ISS TALKS TO WISCONSIN SCHOOL

Students at Tremper High School in Kenosha, Wisconsin, asked questions the morning of November 6th of the International Space Station Expedition Three Commander Frank Culbertson that got some very personal responses. Culbertson told the teens that he certainly did not expect as much to be happening on Earth during his stay at the orbital outpost, in obvious reference to terrorist attacks. He said that he wished that he could have been with his family during the most stressful times, but he took comfort in knowing that they were strong, and could get by.

On a brighter note, Culbertson said that his current mission is the high point of his space career. He added that he hoped some of students at Tremper High can do the same thing some day.

In response to another question, Culbertson said that he hoped to see cheaper access to space, and hoped for a manned Mars mission and a permanent lunar base during his lifetime.

The contact was an event facilitated through the Amateur Radio on the International Space Station project, sponsored by AMSAT, ARRL and NASA. In all, fourteen students asked one question each during the contact. About 60 other students and a few teachers witnessed the event in person, while M-S-N-B-C carried the audio portion of the contact live over its website. (ARISS release by Gene Chapline, K5YFL)

**

HAM RADIO IN SPACE: NEW ANTENNAS HEADING TOWARD THE ISS

The International Space Station could have a new set of ham band antennas by early in 2002. The antennas are expected to be trtansported to te ISS this month and installed around the perimeter of the Service Module. This will give the I-S-S ham station high frequency, VHF, UHF and microwave capabilities.

The most interesting of all the new antennas is the high frequency array. Its made up of a two and one half meter long flexable tape that will definately work on 10 meters and holds posibilities on 15 and 20 as well. This particular antenna was a joint effort of the Italian, Russian and United States ARISS design team. (ARISS)

**

HAM RADIO IN SPACE: STARSHINE NEEDS TELEMETRY REPORTS

Ground controllers of the Starshine-3 ham radio satellite are seeking volunteer amateur radio operators and others worldwide to monitor and report telemetry from the recently-launched satellite. Starshine 3 transmits 9600 bit per second AX-25 protocol packet telemetry every 2 minutes on 145.825 MHz.

The satellite’s primary mission is to involve school children from around the world in space and radio sciences. Students should be able visually track the satellite during morning and evening passes by recording its telltale mirror flashes and reporting their observations to Project Starshine. To report Starshine 3 telemetry or to learn more about it, please visit http://epulation.com/starshine/starshine3. More information about Project Starshine is available at www.azinet.com/starshine. (STARSHINE vis AMSAT-NA)

**

CONTESTS: THE PSK-31 DEATH MATCH

Call it a truly different kind of contest. This, as the Michigan DX Association announces that it will sponsor the PSK-31 Death Match. The dates are December 7th through the 9th and a trophy will be awarded to the highest overall score. Just what is the PSK-31 Death Match and what are its rules? You can find out on the web at www.geocities.com/mdxa1/death match.html (Internet release)

**

DX

In DX, a big surprise for 6 meter enthuiasts. Jeramy boot, G4NJH, has the details:

--

A combination of high solar flux and low magnetic activity provided world-wide F-layer propagation on 50MHz during the week up to the 4th of November. Strong backscatter and the occasional Sporadic E openings meant that all continents were worked from the UK on 50MHz during the course of the week.

On Tuesday, the 6th of November, a solar coronal mass ejection hit the earth's magnetic field at 0150UTC and triggered widespread auroras. Observers as far south as central California reported seeing vivid displays of the Northern Lights, although we had no reports of visible auroras in the UK at the time of compiling this bulletin.

--

As we go to air 6 meters remains a worldwide D-X paradise. More information is on the web at www.rsgb.org and on the subscription VHF reflector. (G4NJH)

In other D-X news word that two Spanish operators will be in Cameroon between the 11th and 23rd of November. The pair will be working on the installation of HF and VHF stations in hospitals and missions. In their spare time they will be on the air as TJ2RSF on the High Frequenvcy bands. Activity will be mainly SSB, with some RTTY and CW. (VHF Reflector)

And Chris Post, N3SIG, who is a Firefighter and EMT in the United States Antarctic Program at the McMurdo Station on Ross Island is now active as KC4/N3SIG until March 2002. Post told the Ohio Penn D-X newsletter that he will be active every other day starting around 2000-2100 Eastern U.S. time primerally using SSB on 20, 18 and 15 meters. All QSL cards go to AI3D and be sure to include an S-A-S-E. (OPDX)

**

THAT FINAL ITEM: HAM RADIO IN LEBANON

And finally this week, a look at how ham radio is able to survive in Lebanon. Q-News Graham Kemp, VK4BB, looks at the nation, its licensing system and its Amateur Radio Community:

--
Wireless communication was first introduced in Lebanon by French soldiers during the French mandate; consequently, a number of curious and interested Lebanese took on this hobby and started operating under a permit and a call sign provided by the French Authorities.

With Lebanon gaining its independence in 1943, the Ministry of Post and Telecommunications become the issuer of the license to own and operate an Amateur station.

In 2000, there were 230 licensed ham operators in Lebanon, and anyone over 18 years is eligible to acquire a radio amateur license.

Maximum authorised transmitting power is 1,000 watts. The exam is prepared by RAL and is supervised by governmental officials. It comes in three separate parts, which involve multiple choice questions which include theoretical questions on electronics, antennas, and other technical information. Also rules and regulations of amateur radio, and the laws of communication. Also, a test on how to establish a vocal contact over the air.

Their Society is the RAL-- the Radio Amateurs of Lebanon which, like ours represent him or her before the Local authorities and the IARU

From Q-News Australia, I’m Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.

--

Truly an amazing story of how ham radio can survive even in the midst of geo-political problems that have plagued the Middle East for as long as man can remember. (Q-News)

> Christians.

Precisely the point. If Islam is fundamentally and totally intolerant
of any other belief system, and considers any other as evil and Infidel,
then it is immaterial whether the "other" is Christian, Buddhist or
Hindu. They do seem to hate us Americans more, though, evidently for our
secularism and success at accomplishing such a free nation. Islam is
clearly a very restrictive doctrine that abhors freedom of choice in
almost all facets of life. Your life is to be lived for Allah and not

much else. How in the world does such a belief system garner such a large following? One can only assume that all those believers know nothing else.

Please understand that I don't approach this as a contest between Islam and Christianity, I see it as an assault by Islam on every other belief system, as dictated by basic Islamic religious precepts. How else can one view it given the events of the past few months, coupled with all the earlier Islamic terrorist acts? The intent of the radical wing of Islam couldn't be more clear. And that wing is not trivial, clearly the opposite. Any Moslem must be considered to be a potential Believer who has, perhaps secretly, sworn Allah's vengeance on any infidel, whenever and wherever the opportunity presents, until proven otherwise. And one then doesn't know how that same Moslem will act next time. See the point? It appears that Islamic "religious" training basically leads to an unstable personal state where individual Moslems may decide at any time that they are, after all, and after many years of resisting, obligated to do Allah's will, and commit what amounts to a terrorist act. Indications are that on Sept 11 there were other hijackers on other planes, in the air enroute, who did not carry out their mission, perhaps deciding they were not ready to die, after all- at least not right then. So when?

> I've had the pleasure to work with and/or to know Muslims from
> many different countries. The outlook of these various people has been as
> broad as there are Christian views and denominations.

Agreed, but with the huge numbers of Moslems, it has become clear there will always be far more than enough radical strict constructionists to do a pretty good job of carrying out Mohammed's directives as instructed by basic Islamic teachings. Unless we defend ourselves. How to do that is problematic.

> And obviously, the
> United States is also a nation of peoples of the Jewish, Buddhist, Hindu,
> and many other faiths. That is what makes the United States "great", as it
> were. Ours is a country that is unified by the belief in liberty and freedom
> of thought, no matter your faith, race or ancestry.

And as I tried to point out, this becomes the very root of our peril when faced with a religion, which we characteristically must tolerate, which is intent on destruction of every other belief system, including (y)ours.

>
> I think that it is also easy to mistake political policy with religious
> opinion.

That, again, is the root of the problem. Under Islam the two cannot be separated. So we wind up tolerating a form of government that intends to kill us off as evil infidels just because we MUST tolerate it as a religion! A quandary and total paradox if one ever existed.

> Probably a lot of the "Muslim world" looks at the U.S. as a
> "Christian state" but sees that it does not behave like one, neither in
> foreign policy nor in domestic policy (and probably many Christians would
> agree).

But the vast numbers of radical Moslems -and there ARE vast numbers of them, despite the also large numbers of Islamic moderates- see all that as just more reason to destroy us, as dictated by their strict religious beliefs. We are a sinful nation which doesn't even adhere to our own religious standards in their view, although they would destroy us as infidels anyway.

> On the other hand, I have been to Iran (in 1995. My wife is Iranian)
> and can attest to the general irreligious nature (i.e. not prone to
> following rituals, praying, attending mosque, etc.) of the average Iranian
> despite the government's claim to be an "Islamic republic".

Part of the problem is that Islamic radical fundamentalism is cyclical. Look at what happened in Iran in 1979. And now bin Laden, Al Queda and the rest. It is clear from Sept 11 that this is a particularly vicious cycle, one which could conceivably accomplish Allah's assigned mission -our destruction- if we fail to defend against it.

> I don't mean to
> denigrate anyone but it appears to me that there are extremists in any faith
> and that they are usually a small minority.

Certainly very true, but the difference is that Islam is the only totally intolerant belief which preaches and demands the eradication of all other belief systems. That alone places it into a totally different category when it comes to our response. We drop our guard at our peril. Basically Islam is different from any other religion in that regard, and can, maybe even must, be viewed as something other than a religion. Religions don't teach mass murder and utter destruction based simply on a differing point of view regarding the characteristics and wishes of a deity.

> Probably most of the truly
> religious (as opposed to religio-politically fundamentalist) in Iran resent
> the government for giving the religion a bad name. If there was any hatred

> engage me in conversation, no matter whether I was with my wife or others or
> whether I was out alone. One man, a government employee, insisted to pay my
> entrance fee to the museum where he worked.

I agree that many Islamics are moderates and that the group which demands our extinction is a minority, at best. But when there are so many that minority, strident and ruthless as it is, and clearly they ruthlessly hold the upper hand and maintain power over the moderates, -moderates avoid a nasty fight, the radicals do not, so the radicals generally win out over moderates- as the Taliban has done in Afghanistan. It behooves all Islamic moderates to control their radical

elements instead of supporting them as so many clearly do. Examples abound, as the wealthy Saudi prince who tried to give New York a $10 million check along with a lecture on how wrong we are in our Mideast policies. Where do you think he would stand in a all-out contest? One cannot assume anything friendly about them when you know they are trained in the basics of Islam from infancy, and it is clear what those basics are.

>
> Anyway, I guess that what I am saying is that religion is not the key to the
> present problem. If "we" set up this conflict along religious lines we will
> fail.

It is difficult to avoid when Islam, the religion, is also Islam, the radical dictatorial government supporting our destruction, and Islam, our sworn enemy to-the-death, by the dictates of their most basic teachings, just as freedom of expression and tolerance of religious beliefs is ours. Given those basic teachings it is difficult to understand how any Moslem can reconcile his religion with friendship toward nonbelievers. It is in fact strictly forbidden in the Koran. There is a built in conflict that is always there, waiting to surface.

Oh- And "we" didn't set this up this conflict at all, on religious grounds or any other. THEY set it up - on religious grounds!!! If we attempt to avoid it as it presents, we fail.

> If we align ourselves according to our strengths,
> ... liberty, freedom and unity

Do you *Really* think it is possible to truly align ourselves with anything that is Islamic after September 11, and all the Islamic terrorism that has gone before, knowing what basic Islamic law and doctrine are? It is one thing for some splinter group to go off on a tangent, but this is clearly not the case here, as shown in basic Islamic teachings.

>... then we will crush the enemy and scatter
> his friends.

So then, just WHO is the enemy and WHO is friend, within the Islamic community - a LARGE community of Believers who have been taught since birth that we -all nonbelievers- are their mortal enemy??? How will we tell them apart? I know, many of them would rather not face up to the internal conflict involved, but what will they think when decision time comes? Will personal wishes for a peaceful existence prevail over lifelong religious training and ingrained obligation, and guilt feelings because of their lifetime spent in avoidance of that obligation?

I truly wish that I could see some light at the end of the tunnel, but this one is a real thorny puzzler. To say that it leaves many Americans, as well as many others, uneasy about the future is an considerable understatement. I and a great many others believe the President is right- this won't be a short term scrap.

Well, I can't speak about Madisonville, Texas. And I'm certainly not going to be presumptuous enough to speak about the whole South. However, based on the relatively limited exposure I've had to schools in various parts of the South (Florida, South Carolina, North Carolina, and Alabama), most schools I've seen appear to fairly well integrated today (students and teachers).

Well, you're certainly right, Phil. However, African Americans (the only significant minority population in this area) are not 50% of the overall population in this country. And they're most certainly not 50% of the local community. Yet, even ignoring the concept of disproportionate representation, affirmative action doesn't even seem to kick in to benefit "white" teachers when that 50% level is reached. For example, I'm fairly certain minority teachers outnumber "white" teachers at the local high school, yet the students come from an area where minorities are less than 5% of the population. And local parents are not thrilled about that fact (they're fed up with their kids celebrating Kwanzaa in school but not christmas).

That is simply not true, Dick. I lived in the Middle East for two years, in the heart of an strongly Islamic country, and obviously lived to tell about it - never converted, subjugated, or eliminated. Instead, the people were open, friendly, and as curious about life in America as we were about life in their country. We were invited into a number of their homes, where we compared countries, talked about world affairs, played card games, and just generally enjoyed each other's company. At no time did any of those people exhibit a hatred towards us, towards the West, or towards America. I have since visited that region twice over the years (extended vacations) and have not seen any change in the people's attitudes towards us.

The people in that region with a dislike, or hatred, of Americans (or the west) are clearly a minority. The majority are like those I just described in the paragraph above. And people like you describe in your message simply don't exist in my mind - I never saw anyone like that during my visits. And, in the end, if what you say is really true about the Islamic people, I should not be here - I should be dead. There were certainly many opportunities for those people to kill me during my long visits, and extensive travels in the area, if they wanted to. But they didn't - and that makes what you say totally false.

By the way, while we're discussing myths about the Middle East, lets also address the myth spread by many women in this country about men there forcing women to wear veils. Based on what we've seen, women in those countries are far more fanatical about women wearing veils than the men are. On several occasions, my wife was mistaken for a local and was reprimanded by another woman for not wearing a veil, or for wearing "provocative" western clothing. This even happened to my mother once years ago. Of course, as soon as the mistake was realized, sincere apologies followed (along with attempts to make amends - we ended up with a large crate of tangerines at a bazaar once because of that). At the same time, never once did a man ever say anything about my wife (or mother) not wearing a veil, nor did they even seem to notice it.

You may be refring to Islamic FUNDAMENTALISTS, who believe this, but this
is NOT what Islam supports.

I have to agree with Dwight, altho my experiences in the Middle East
theater were far more brief. Most Muslims are like most Americans...left alone
to thier own beliefs, they could care less about how others pray, believe, etc.

The Fun-d-less-mentalists are, unfortunately, the squekiest wheels.

>The people in that region with a dislike, or hatred, of Americans

Even those who "like" America have problems with seeing American-made
warplanes lobbing TOW missles and rocket propelled grenades into thier towns.
If those planes were Brazillian, for example, I think a lot of the rhetoric
would be focused there, not here.

Dick, I'll repeat my question again - if Moslems are so intent on our destruction, our deaths, then why am I still here? As I said before, I've lived in the Middle East and have visited the Middle East for extended vocations. If, as you claim, Moslems are so determined to kill Americans, why am I still alive?

You say that Islamic law, and indeed Allah (god) himself, demands our death and destruction. I've never seen any such nonsense in the Koran (their Bible). In fact, from what I've seen, the only possible way to come to that conclusion would be to twist vague passages in that book to fit your agenda.

The Islamic people are not the horrible monsters you're making them out to be, Dick. Only a small percentage of the Islamic people dislike Americans, and even fewer see us as the enemy (mainly because of our support of Israel). To say anything more than that would be a total lie based ignorance and/or hatred.

You're right, Steve. It is the extreme right wing that causes so many problems. And much of that comes from their embarrassment over the loss of the lands now called Israel. In their minds, they saw the creation of Israel as lands taken away from them, which they were not able to stop. The immediate result was a series of wars (as much to regain face as to regain the lands). When that failed (which many there believe was caused by our military aid to Israel), they resorted to the only option available to them - terrorism. That is not an attempt to excuse the situation - it's simply an explanation. But, to some extent, it also suggests a possible solution. Perhaps if we can find a way to help the Islamic people regain face, and still allow Israel to exist, this whole conflict might be brought to an end. Of course, that is much easier to say than to do.

I admit the improper use of a homonym. Even best-selling authors are tripped up by them. It's interesting, however, that you chose to point this out, yet I've never seen you post any response at all to Bruce's (WA8ULX) incoherent ramblings. I would think that if you were going to attack spelling and grammar errors, you would do it for all postings. Could it be that you only respond this way to people you disagree with?

Oh gosh, Dick. I hate to burst your bubble but I am taken seriously, quite seriously in many ham radio circles. I have just resigned my position as Hunt County ARES EC; I have mentored each and every level of the ARRL's ARECC Courses on Emergency Communications; I was part of the team for development of Level II and Level III of those courses; and continue as a mentor for each and every Level. I am a former MARS member (NNN0YCD), Navy MARS; I provide mentoring and guidance to many new hams on emergency communication; want me to go on?

The fact is, some people are adult enough to ignore the humor of my callsign during inappropriate times, and have fun with at other times. Some adults continue to trivialize the ARS by acting like children looking at a their first dirty picture when they hear my callsign...such as yourself.

By the way, why I am responding to a man whose posts I have just seen this morning on the subject of the Islam Faith and his paranoid translation of same, goes beyond me. Would you have the same opinion of the Baptist faith, Dick? And, I choose the Baptist faith because, Dick, if you ain't Baptist you are going to Hell as far as they are concerned. *ANY* zealousness (even yours) is intolerable. The people you describe are zealots with their religion and they are hiding behind a shield of religious translations they have come up with. Louis Farrakhan(sp) is a religious zealot, in my opinion. Why don't you go track him down, Dick? He's on our soil. In fact...gosh, I think he's a US Citizen.

That's exactly the point, Dwight. It would never have happened without
Affirmative Action.

> that is problematic.
>

Yeah, they're breeding like rabits for crying out loud. Good grief, how
much more could someone *not* understand the religion? Maybe it's easy to
become a zealot. In the above example, we have someone who claims to have
read and learned the religion of Islam, yet translates it exactly as a
fundamentalist Muslim would, or, wait, even as someone who can't read would!

> >
> > I think that it is also easy to mistake political policy with religious

>

So, when a Catholic becomes a senator or representative, I can count on that
he won't vote with his/her religious convictions, say, on abortion? Yeah,
right. C'mon people, wake up. That Muslims subscribe to their religion in
all walks of life--personal and political--is no different than *any* other
religious tennet (and I am *not* talking about zealots and
fundamentalists--I am talking to the example above, used to illustrate that
it's ba-a-a-a-ad to make political decisions using religious judgement).

For most religious people, those who truly do love and believe in their
religion, one (personal) is not separated from the other (religious). Nor
should they be. Either you believe or you don't. If you believe, you know

that your decisions in all circumstances will be guided by the goodness and fairmindedness of your God.

> > Probably a lot of the "Muslim world" looks at the U.S. as a

> beliefs.

I remember an encounter with a Jimmy Swaggart follower several years back. When he found out that my friend standing next to me was a Catholic, I mean it was like he was looking at Satan him/herself!!! He pronounced her to Hell immediately. Yeah, right...like Jesus would ever have acted like that. This guy's jugulars were about ready to explode, his hate was so mighty.

> We are a sinful nation which doesn't even adhere to our own
> religious standards in their view, although they would destroy us as
> infidels anyway.

While I know darned little of the Islam faith, I would say that most Muslims are more distracted/concerned by the fact that we Americans are as materialistic as we are. I don't think they care what "religion" we are. They care that we are quite distracted and absorbed by material things in life, rather than spiritual.

[snip]

> > I don't mean to

> all other belief systems.

That is pure-D ***BULLSHIT*** In each and every religion and/or church I have been in, the very principles described above are either alluded to or outrightly spoken and believed!!! The Jehova's Witness faith I observed (never joined but went to "retreat" with my girlfriend and her family) was the worst. I remember by the time I got out of that gathering I felt like running home and protecting my family.

Good grief, to ignore that each and every faith believes it is "the one" is to ignore what most of us who don't attend church see every day.

>

I can assure you that, while it would be an extreme to have anyone express it, each and every church of this world would love for the world's citizens to be "them." If one does not believe that, certainly as a Christian, then why would anyone have the desire to "correct" a wrong belief--why would there be differences in dogmatic approaches to the Heavenly Gates of our Father who Art in Heaven? And no one could convince me of a spiritual Christian (one who truly believes and acts on Christian principles) who is a politician and does not include their faith in their decision making. I surely hope they do, because if they don't they are a fake.

>
> Oh- And "we" didn't set this up this conflict at all, on religious

The great divide in diversity here in the south has been what shocks me the most, having come from the north. It is hard for me to assess, though, because I went from small-town (a place Dave Heil doesn't believe in) USA in the northeast to big-city USA here in the south...well, Texas. I know that inner-city schools seem to be populated greater by blacks, while the suburbs are fairly diverse. Now, here in Forney, TX USA, the schools seemed to be predominantly black. BUT, I add that I am not certain about percentage of population. I don't know. I am talking sitting in a car as a mom picking up her kids and watching the flood of students coming out the doors--most were black.

Very few people I know down here are without prejudice. It is quite saddening to hear. And, I shun people who have been friends the instant I learn of their crap. I cannot stand it...

I wonder if it's due to the fact that Affirmative Action was established and
implemented to address disparity in hiring practices *for blacks* (mostly),
that it doesn't seem to work across the board? I mean, it's kind of like
the whole concept of "reverse discrimination." It just doesn't sound right.
So, would it "feel" right to apply Affirmative Action to Whites?

Well, but see Cecil--the way I see it here is that Dick C. and Dave H. are thinking alike here. They both have lots to say, Dick especially on how evil the Taliban are, and both of them especially on how evil my callsign is...I mean, after all, evil is what could destroy the ARS, right?

Well, maybe, just maybe they have a point. It isn't the Taliban's dogma and fanaticism we must face here in this newsgroup and in amateur radio. It is theirs. But, theirs is OK.

Dick Carroll wrote:
> The intent of the radical wing of Islam couldn't be more clear.

The intent of the radical wing of Christianity couldn't be more clear.
Do you think it is acceptable to bomb abortion clinics and murder
abortion doctors? That murdered abortion doctor is just as dead
as any individual who died in the WTC. You seem incapable of
conceptualizing quality Vs quantity.

> Any Moslem must be considered to be a potential Believer who
> has, perhaps secretly, sworn Allah's vengeance on any infidel, whenever
> and wherever the opportunity presents, until proven otherwise.

You are mentally ill, Dick. It's called paranoia. Consider what you
are saying. You will consider any Moslem as guilty until proven
innocent. That's the same warped concept that you accuse them of
following. You are no better than they. If you cannot prove that
you are not a rapist, I think you should be hanged from the
nearest tree. How does that sound? That's what you are advocating.

> And as I tried to point out, this becomes the very root of our peril
> when faced with a religion, which we characteristically must tolerate,
> which is intent on destruction of every other belief system, including
> (y)ours.

The Christian religion is intent on destruction of every other belief
system. Our Southern Baptist preacher reiterates that principle virtually
every Sunday. He emotes psychological terrorism trying to scare people
into adopting the Southern Baptist brand of Christianity to avoid going
to hell.

> But the vast numbers of radical Moslems -and there ARE vast numbers of
> them, despite the also large numbers of Islamic moderates- see all that
> as just more reason to destroy us, as dictated by their strict religious
> beliefs. We are a sinful nation which doesn't even adhere to our own
> religious standards in their view, although they would destroy us as
> infidels anyway.

Virtually every Sunday, our Southern Baptist Preacher says that if the
US doesn't turn back to God it will be destroyed. Said preacher believes
that terrorism is God's punishment for being a sinful nation, i.e. the
terrorists are doing God's will.

> It is clear from Sept 11 that this is a particularly vicious
> cycle, one which could conceivably accomplish Allah's assigned mission
> -our destruction- if we fail to defend against it.

Remember Allah, Jehovah, and Yahweh are all the same God. Some Moslems
have perverted their religion. Some Christians have perverted their
religion. Some Jews have perverted their religion. Incidentally,
according to the Bible, I should be punished for uttering God's
name.

> Certainly very true, but the difference is that Islam is the only
> totally intolerant belief which preaches and demands the eradication of
> all other belief systems.

Don't know much about the Bible, do you, Dick? What do you think is
the purpose of missionaries? What do you think is the purpose of hell?

> I agree that many Islamics are moderates and that the group which
> demands our extinction is a minority, at best.

And the group who *acts* toward our extinction is an even smaller
minority. The individuals committing the criminal *acts* should
be prosecuted. The individuals who do not put their beliefs into
action are exercising their freedom to *think* whatever they
wish to think and should not be persecuted. You, OTOH, want to
punish people for what they think. Tsk, tsk, Dick, shades of
"1984". Our government is doing the right thing - going after
the criminal activists and leaving the law-abiding majority
alone as best they can under the circumstances.

May I point out that you have many, many evil thoughts. Should
you be punished for them?

> Given those basic teachings it is difficult to
> understand how any Moslem can reconcile his religion with friendship
> toward nonbelievers.

It is exactly the same with Christianity. The rational people seem
to have no problem. The irrational people who perform criminal
actions are the problem no matter what their religion. In condemning
an entire religion, you are failing to condemn the real criminals,
i.e. the people who plan and perform criminal actions no matter what
their religion.

>they
>> stand on it.
>
>Yeah, that's true. CW doesn't seem to be a major concern for the majority
>of hams.

Yup. Most hams, if they want HF, just learn the code and pass the test. If they like it they use it on the air. No big deal to most hams.

>I think for the most part, the hobby is just that--a hobby.

To you, maybe, but not to a lot of others. Nowhere in Part 97 does the word "hobby" appear.

>> Your proposal to test a packet setup singles out a mode, too.
>
>I will challenge that only with the statement that I didn't intend to have
>the "mode" tested. The testing objective would be to grade one's ability to
>understand how to put things together to make them work. It could be a
>packet station, APRS tracker, PSK, etc.

Or a CW station.

There are at least three problems with this approach:

1) The VEs would be burdened with providing the equipment and the time for the tests. Unless they provide a mountain of equipment, testees could complain that the test is about things they have no interest in. Example: "I don't want to use PSK31, I'm only interested in PACTOR!!" And consider the needs of the disabled....

2) The objectivity of the tests would be questionable. One of the main reasons for multiple-choice written tests is that for every question there is a unique right answer, and it's publicly available. No judgement involved - either the testee put down the right choice or he/she didn't. Practical and essay exams of any type require that someone subjectively decide if the testee has

demonstrated adequate knowledge. Sooner or later, any amateur radio test based on subjective judgement by a volunteer examiner will be legally attacked by someone who flunked. Since the writtens have been multiple choice only for about 40 years, it will be hard to defend practical or essay tests.

>> >To leave CW as a testing phase of licensing does not prove (or disprove
>in
>> >the case of failure) one's aptitude for anything related to ham
>radio--other
>> >than CW use.
>>
>> A CW test is only needed for access to the HF/MF ham bands. CW use is VERY
>> related to ham radio in those bands.

>Only in terms of using the mode.

And the mode is widely used on the HF/MF ham bands. It is second only to SSB on those bands. An HF-licensed ham with a complete ignorance of Morse has a great big hole in their amateur radio knowledge.

>It does nothing to prove a darned thing
>amateur related other than the knowledge of the language of CW.

Not true. It proves that the person who passes the test was willing and able to learn enough Morse to pass the test, whether or not they ever intend to use it on the air.

Many folks thing it unreasonable to expect anyone to "ante up" for a ham license, though, particularly if they don't intend to play that particular game.

>> The test determines whether the person being tested has a very minimal
>skill
>> level, too.
>>
>> > It does not prove credibility in the area of operation,
>> >ability to properly operate, or anything to do with safety.
>>
>> Neither do the current written tests.
>
>Ewww-boy. Don't even get me going on that. I wholeheartedly agree.

Did you let the FCC know? I did - much of my comments to them on 98-143 was about the written tests and how to improve them. I posted my comments here way back when (1999)

>One of
>my most emotional responses to the CW debate is if the people who want to
>use CW skill as a measurement of someone's genuine interest in the hobby of
>ham radio--spend as much energy changing what we can about the current
>written tests!

I did. See the comments.

> What a joke.
>
It must be understood that the FCC is not very interested in doing what's best for ham radio's future. Their interest is an orderly service at the minimum expenditure of limited FCC resources.

Once upon a time the biggest ham radio enforcement headache the FCC had was ham signals that wandered outside the bands and messed up other services, or ham signals that were below-par in quality. Hams on the air back then were a very well-behaved lot. Look at the enforcement actions today - they are not for technical troubles.

The FCC philosophy of testing is really all about solving demonstrated troubles. The old tests were full of stuff about how to radiate a clean signal and keep it in the bands because that was what hams had the most trouble doing back then.

I have some old License Manuals, and the study guides for a General class license contain all sorts of stuff about harmonic filters, crystal tolerances, frequency meter use, where the band edges were, etc. But not a word on antennas!

>> >If a "construction" project of some sort were to be brought into the
>testing
>> >arena, it at least proves that the ham is aware of FCC specifications,

>that will transmit cleanly between a couple of bands--then the design would
>have to based on things like will a tuner be used, will it be a long-wire,
>inverted, etc. Not only would the project have to be built, it would have
>to be explained why it would work.

And the pass-fail would be a subjective decision by the VEs. Plus all of the other problems listed above.

What would you say to the prospective ham who says he intends to buy a manufactured antenna and follow the directions? Or to only operate one band? Why does that ham have to demonstrate antenna knowledge if he never intends to be in the scenario you describe?

The arguments against code testing all apply to your proposal.

> Or, have the FCC exam present on paper a
>scenario with an embedded problem and the test is a full disclosure of what
>to do to resolve the problem.
>
Essay questions. That was done back before 1951. In fact, before 1940 or so the written exam was all essays. A typical question might be something like: "Explain what precautions should be taken to reduce harmonic radiation from an AM voice amateur radio transmitter using a plate-modulated Class C final

amplifier. Draw schematic diagrams where applicable". A correct answer would fill a couple of blue book pages. And that was just ONE question. A written test could easily take a few hours. The grading time alone caused the FCC to go to multiple choice - first partially, then totally.

>> >While it is not required that I build
>> >anything once I am a ham--a successful building project that meets
>> >specifications of the FCC will assure the FCC--and *should* assure
>> >hams--that the new licensee at least knows something about the R&R.
>>
>> Maybe - but the simple tests you propose don't do that.
>
>Heh heh. Maybe that should be clue number one to you.

Clue of what?

>I can guarantee you
>that you are far more "into" the hobby than I am.

So? I've been at this game for almost 35 years.

> While I am not saying
>*you* are like this, many believe people like me should not be in the hobby.

Anyone can have an opinion.

>People like me don't see the above as "simple tests" :).

Which is a triple whammy on them.

1) They don't prove that the person being tested really knows the stuff
2) They are not objective measures of things hams need to know
3) Those being tested see them as difficult.

>> >PLUS I think getting rid of CW testing without something to take its
>place
>> >will really piss off a bunch of people. I'm willing to have CW testing
>> >ousted, and feel that a building project is a more favorable way to

>>
>> On top of all this, such testing would be too dependent on the subjective
>> judgement of the VEs. These days such tests simply wouldn't get through
>federal
>> regs.

This last is the real killer. Unless a test is objective and unvarying across testing sessions, you're gonna have a tough time selling it to the FCC. What they would go for is a license test that resulted in better on-air behavior.
>> --
>>
>> How about this idea:
>>
>> Divide the bands into three segments: CW, digital, analog voice. Separate

In my eyes, it's a much the truth as your belief that someone's callsign is
going to bring the ARS "one step closer to extinction." In fact, in my
eyes, that you are an abrasive, demeaning, bigoted individual is *more* the
truth.

> >
> >I might begin to consider that my "behavior" is damaging
> >to ham radio.
>
> Now -- THAT is the truth!
>

And you are entitled to your belief that it's the truth. I say it is not.
Evidence that the ARS has grown even since I got this callsign is a direct
submission of support to my belief, Larry. Where's *your* proof? At least
I can back my defense up with numbers and statistics.

That's because, essentially, this newsgroup is a one-way "transmission,"
Larry. On the air or in a group of people outside the venue of the
internet, you would be a laughing stock and avoided at all cost.

> >
> >Just *half* serious, Larry. 'Cause, see, I figure that your dislike

Once again, do you wish to get into a game of statistics. Let's count the
number of times I submit my own thoughts, as opposed to the number of times
I simply use a meaningful, practical, efficient way to agree with someone.
After all, Larry, you almost more than anyone, should appreciate, rather
than condemn, meaningful, practical, efficient methods of communication.

> >
> >and gets right in there with the best of you to shoot from

How much ignorance you display, Larry. How is that you believe Cecil knows
me? I bet you and I have "communicated" more on this newsgroup than he and
I. By the way, let's get real. I am on the air with my callsign, on 2M,
MAYBE an hour a month. And that is a serious *MAYBE.* For instance, the
past two months I have probably been on the air about 15 minutes or less.
You have been on this newsgroup--*AND* however much you have been on the
air--lots. If we are to believe, as you've said, that what "we" do here on
the internet is not to be taken as actions that have anything to do with ham
radio--then I've offended much less than you, Larry.

And, no where does it say that CW testing proves anything about technical
aptitude, seriuosness of one's committment to the hobby, etc. All the
"measures" that many disgruntled on both sides seem to argue about.

> >>
> >> Your proposal to test a packet setup singles out a mode, too.

>

Well, seriously, there is a problem with the dialogue on the topic, then :)
Because--in my opinion--there is no way that CW will continue to be a
testing requirement and--in my opinion--*nothing* will be brought forth to
take its place.

However, to entertain the topic of discussion, on your 1), above, a) if the
VEs would have to provide the equipment, so be it. Either they take their
VE status seriously and meet whatever requirements there are or they "get
out of the business." Now, PLEASE VEs reading this, don't think I am
slamming you--I am not. I am sure that most of you take yourselves quite

seriously; and, b) the testees complain now and will always complain. On your 2), above, a) in my opinion the objectivity of VEs is in question; maybe not on a majority basis, but certainly one-to-one. I know of stories of people getting their tickets who shouldn't have; b) I would support a return of the FCC examiner. While I know that will never happen, I believe several things would be accomplished: there could/would be less claim of favoritism (such as I have just mentioned in 2a), the objectivity would be less questionable; and the result of having less "dumbed-down" would be achieved.

I fully support getting rid of the question pool and having essay questions. I would *really* like to see something like that. I actually took no pleasure whatsoever in getting my ham license. The same as I take absolutely no pleasure in getting the huge bonus I get every year from work. I believe the formula for the bonus is flawed and I have been on the measurement side--it's definitely bogus. Why would I feel any sense of accomplishment or pride in getting my ham license when *all* it took was memorization--both on the written *and* for the CW. I couldn't do a bit of CW today...at least I don't think I could. I can't answer half the old questions.

Contrary to the thoughts on both sides of the argument: I *don't* believe I learned anything through memorization of the questions, and I *don't* believe I learned CW by memorizing characters. If I'd learned anything, I would be able to recall the information. Either I have Alzheimer's or I didn't learn.

the
> other problems listed above.
>

I still think that's OK. I remember testing up in Gainesville, TX, before the restructuring was over. I tried for my CW test for General class license. Now, mind you--I'd not studied a bit. What my intention was was just to see if I "happened" to pass the CW by guessing the answers. The VE walked up to me with a piece of paper and pencil and I told him I wouldn't be needing it. He insisted that I *must* submit that piece of paper--with notation--or they would not pass me, even if I passed the CW test questions. I had tested one other time in the same manner (think it was in Greenville, TX--but not sure), and those VEs said no such thing. How subjective is that?

> What would you say to the prospective ham who says he intends to buy a
> manufactured antenna and follow the directions? Or to only operate one
band?
> Why does that ham have to demonstrate antenna knowledge if he never
intends to
> be in the scenario you describe?
>

Well, actually I agree. While I concede to those who feel there must be *something* in addition to written testing; my ultimate belief is that *all* that is needed is written--and *HARD* written at that (essay questions would be a good start to a debate).

> The arguments against code testing all apply to your proposal.

>

Now, *if* (and I assure I wouldn't) I were to expend the thought it would take to answer such a question and get my license under the scenario you describe above, I would be *very* proud of my license.

I like the Jim/N2EY here in this discussion. I used to feel quite trapped by you when you'd ask me a question, I'd answer it and you would chew it all to pieces (I think knowing full well that was the answer I was going to have--you just wanted me to say it before you chewed it all up) :).

I didn't answer any of the post on my philosophical stuff, because here is not the place to even *try* to discuss such things. Those kinds of conversations, to me, are much better in person.

>Dick, if a single cute call sign can "trivialize the entire ARS
>system" then the ARS was trivial before the call was issued.

Cecil:

The problem with Kim's "single, cute callsign" is that it is seen and heard by potentially thousands of people who do not view the ARS as a forum for sexually-oriented, libertine behavior. The ARS is always touted as a "family oriented" service, which seeks to attract young people in order to ensure it's future. When the parents of these young people see a ham such as Kim, flaunting a callsign designed to call attention to her secondary sexual characteristics in an allegedly humorous way, they are not likely to get the joke. Therefore, the joke is on Kim -- and the ARS suffers yet another indignity, and is thus taken "...one step closer to extinction."

I value freedom of expression just as much as you or anyone else in this newsgroup -- but I choose to use that freedom in a responsible manner. Kim has not shown us that level of responsibility; she has chosen instead to act in a notably irresponsible manner, to the detriment of all of us who value the positive image of the ARS. Moreover, she had the nature of the damage she was doing explained to her by no less an authority than Riley Hollingsworth, yet she chooses not to take corrective action. This bespeaks the true nature of her selfish motives. By defending her, all you do is bring your own credibility into question.

>mentor for each and every Level. I am a former MARS member (NNN0YCD), Navy
>MARS; I provide mentoring and guidance to many new hams on emergency
>communication; want me to go on?

Kim:

All throughout my life, I've had one concept very thoroughly drilled into
me: No matter how much good you do, a single bad act wipes out the
entire image. I have always worked longer and harder than anyone
else, took more responsibility, and accepted greater risks to my career
than anyone else around me, wherever I'd been during my military career.
I've saved the U.S. taxpayers millions of dollars by exercising intelligent
management of resources. Yet, many times, I had to face serious
problems due to relatively insignificant errors -- errors which did not even
result in any degradation of the ability to accomplish the unit mission…
and, errors which others have made, repeatedly, but were usually ignored.
One of the reasons why I was severely affected by those errors is because
I was always working rings around everyone else who was competing for
the same promotions I was -- and I was showing them off for the slackers
they truly were. *I* was the one who deserved the maximum performance
ratings, and I usually got them. *They* needed them, but couldn't be
given them, so they "got even" with me by causing trouble. Well, all of
that is behind me, and I ended up coming out on top in spite of my
detractors. You, OTOH, are not in the same position.

Your selection of an offensive, demeaning callsign singles you out as a
fool, possibly as an idiot -- by fellow hams and prospective hams, who
recognize your callsign for the childish attention-getter that it is.
Therefore,
no matter what good works you perform as a ham, you, THROUGH YOUR
OWN CHOICE, persist in destroying any good opinion of yourself as a
ham or as a person.

>The fact is, some people are adult enough to ignore the humor of my callsign
>during inappropriate times, and have fun with at other times. Some adults
>continue to trivialize the ARS by acting like children looking at a their
>first dirty picture when they hear my callsign...such as yourself.

Kim, that is precisely the effect you desire from your choice of callsign, and it gives you some sort of juvenile pleasure when it happens. However, your selfish, self-satisfaction aside, you ignore the ill effect of your call when
it is seen or heard by prospective newcomers to ham radio, especially, as Mr. Hollingsworth said, parents or grandparents of young children who were thinking of the ARS as a wholesome, family-oriented activity to pursue. You don't see the potential damage, and because you do not, those of us who do have no choice but to judge you in a negative light.

As I said, Larry, the figures prove otherwise on statistics as to whether my callsign brings the ARS "one step closer to extinction."

Where's *your* proof? If it's just your opinion, as I believe it is, that's fine. But, if you believe what you say is a truthful reflection of reality, then prove it...that's all I'm asking. Prove it.

If you are/were so good, Larry, then why were they able to cause trouble for
you? You know...most people who end up on top--I am sorry to say--are those
who have done nothing more than kiss the most ass, Larry. Nothing more,

nothing less. Most people on top are just bigger ass kissers. Doesn't say that's the case with you. However--somehow your personality just doesn't strike me as that of a leader at all, Larry--a character true on-top people would generally have.

Sorry, my opinion of myself is as high as it can possibly get. And, unlike you, I don't seek the aproval of doting idiots for my "feel good." I *know* I am a good person.

Well, as I've said...the new challenge to you, Larry, is to put up or shut up. Tell me where you are getting your numbers/statistics that prove my callsign is putting the ARS "one step closer to extinction."

Put up...shut up. Lead, follow, or get out of the way.

Kim W5TIT
A damned good person with high moral character.

> Indo-Chinese border area to Spain from about 800 to about 1300 AD.

So, to cut right to the point, how many generations of radical
terrorist zealots do the radical fundamentalists -whose creed is well
described in their writings and the fundamentals of Islam, regardless of
its enlightened distant past- need to indoctrinate before you can
finally believe what has happened in the past couple decades, capped by

September 11?

We know that the Al Queda terrorist organization has passed more than 12,000 of these mostly illiterate youths through their terror schools in Afghanistan alone in the past few years, and Pakistan is not without intimate implicitly in it all, whatever their present official stance. How many more there are that we don't know about we can only speculate.

I'm without the benefit of your extensive education, although I did minor in history at the regional state university and am not ignorant of the enlightened background of Islam in its distant past, nor of the atrocities of the Christian Crusades, and other similar situations.

But all that was then. September 11, and all it ominously implies, are NOW. A significant number of those people *are* out to get us, any way they can. Reading their fundamental beliefs only heighten the knowledge that their numbers can easily grow very fast, given that all Moslems are at least nominally obligated to their fundamental beliefs, and we know that what it takes to convert a moderate to something much more sinister is circumstances, persuasion and "the times". We have been suckerpunched and kicked into a corner and by the radical Islamics and we now have come out swinging, hard.

It is clear from observing many interviews of so-called moderate Islamics that almost universally they are at least sympathetic to the Radical wing, and at worst downright happy about their Sept 11 success, as witnessed by all the Arabic cheering shortly thereafter.The Saudi prince who tried to give New York the $10 mil check along with a lecture is a single but ubiquitous example.
You may view all this as you see fit but there is no doubt we have a very serious problem that isn't going to be solved by downplaying the current players based on ancient history. It isn't going to just go away if we act nice. We've already tried that and the results are obvious. And when it is all described in the root document governing both Islamic religion and at once Islamic civil law, I tend to take it seriously.

To equate radical Islam with Southern Baptist doctrine or activity as Cecil has done is ludicrous on its face. So far (the Atlanta Olympic bombing aside) I haven't noticed any deathdealaing terrorists issuing from the Southern Baptist Convention.

Morality is generally based on religion. The Moslem terrorists
think they are doing the moral thing. It's too bad the Taliban
has been routed. You and Dave could apply for a job in their
Dept. of Vice and Virtue.

As long as Sado-Masochistic clubs are made up of consenting
adults, there are no victims and I don't see anything "wrong"
with them. I wouldn't participate but I also don't like chocolate
ice cream. It would be surprising if female bondage doesn't turn
you on given your basic personality traits.

Tell it to New York and the survivors at the Pentagon.

Consider what you
> are saying. You will consider any Moslem as guilty until proven
> innocent.

Read it again, dolt. I said that anyone who subscribes to Islam is
obligated to follow its teachings. Nothing more. The extent fealty is of
course up to the individual. You should know that people instinctively
adhere to their training. If a Moslem is trained to believe that his
belief sytem is ultimaterly destined to rule over the world and it also
happens to order death and distruction to all who oppose that rule, what
should he then do? Training from infancy is not easily overcome in most
people. Not all are "higher order thinkers" you know. Don't you???

That's the same warped concept that you accuse them of

Find me one post where I ever advised anyone to do or how to do anything
illegal. As far as Techs being half a ham, that is because the FCC says you
is and the ITU says you ain't.

That is certainly your opinion, ad infinitum. My opinion differs
from yours and is equally valid and valuable. Methinks thou
protesteth too much, Larry. I suspect there is a sadistic
side of you yearning to be free so you take it out on others.

Well Larry, then you wipe out your entire image ten times a day on this
newsgroup. I find your postings about "welfare mothers of color", for
instance, to be racist, ignorant, obnoxious, demeaning, profane, immoral,
offensive, and evil. You engage in your own brand of terrorism.

> Dick W0EX

Ain't no doubt that there are terrorists afloat. For far too many years there has been a corrupt bargain between the Warlord and the Witchdoctor in Islamic countries: the goon stays in power and the mullah owns the education system among other things. And we will live thru it just as when the rest of the de-Ottomanization of everywhere they ever were takes place in Southern Europe. There is nothing all that unique about the Middle East.

But in the Emirates and some other places the wind is blowing toward more Western-style secularization and a revulsion about mullahs whose only advice is how to go back a thousand years. The ability of religion to be twisted by uneducated clergy is well known within Christianity and Islam is probably more prone to it given its organization or lack thereof.

That more of this sort of lucky bullshit will happen is a given: the IRA has been a major bore as well as thoroughly irrelevant for years. But in the long run of things, the mullahs have overplayed their hand and it is about to get burnt.

You've got to be kidding, Larry. You have made obscene statements
about virtually every minority group. I doubt there is a single
person reading this newsgroup who has not been offended by your
evil immoral poison postings. I am not easily offended and you
have offended me more times than I can count. I am ashamed to
be a member of the same organization as you.

IMO, pathological would be a better description. Your callsign
is negligible compared to the poison that Larry has penned in
this newsgroup.

People who lack class and taste tend to make choices like Kim did
with her call sign. It simply reflects her social standing among
the trail park mentality.

Dick Carroll wrote:

Apples and oranges, Dick. I equated radical Islam with radical
Christianity, not with the Christian mainstream. I would be
willing to bet that the majority of KKK terrorists were/are
Southern Baptists. It's a sure bet that the abortion clinic
bombers and abortion doctor murderers are Christians. As I
understand it, allegiance to Christianity is a requirement
for membership in the Aryan Nations.

What do Christian terrorists, Jewish terrorists, Muslim
terrorists, and atheist terrorists have in common? If that
question is beyond your comprehension, I will explain further.
You want simply to scapegoat an entire religious group rather
than deal rationally with the problem. That indicates the
depth of your intelligence and your hankering for a retreat
from civilized society and a return to a caveman-like tribalism.

Nothing personal in my posting, Dick. Just a statement of the
facts of human psychology. All I am capable of is relating
my opinion, which may or may not be "like it is". In this
case, the messenger is I. Comprende?

Well, not far from the truth. Southern Baptists believe that Catholics
are going to hell. Our Southern Baptist preacher said the other Sunday
that Buddah went straight to hell. Can you explain why a good man who
died 300 years before Jesus was born would go straight to hell?

Class and taste are value judgments. I find intolerance
of Kim's callsign to be typically low class and tasteless.
Intelligent, well-educated people tend to possess tolerance.

Are you paranoid about the automobiles that kill ten times as many
people per year as died in the WTC terrorist attack? If you are
consistent with your paranoia, you will be condemning ALL drivers
of vehicles instead of the bad and/or drunk/drugged drivers.

I think we should find out if the 19 terrorists were coders or
nocoders. Then we would really know what to blame.

> I said that anyone who subscribes to Islam is obligated to follow
> its teachings. Nothing more.

Then anyone who subscribes to Christianity is obligated to follow
its teachings? Has your right eye ever offended you, Dick? Did you
pluck it out? You, yourself, are not following Jesus' words in
Matthew 7. The teachings of Islam are no more literal than the
teachings of Christianity or Judism. Islam is NOT a violent
religion. There are Islamic extremists just like there are
Christian extremists who blow up abortion clinics thus killing
the unborn they allegedly want to protect.

> You can make things foolproof, but you can't make 'em damfoolproof.

Dick, you are the best example I know of that fact. You want
to give up on civilization and return to tribal warfare.

I defend the right of people to watch BOTH! That I personally
care for neither is irrelevant.

On the other hand, if we are going to ban either, I would far
rather it was the senseless violence of a "Texas Chainsaw Massacre," a
form of entertainment that has been _clearly_ demonstrated in research
to encourage violence and acceptance of violence instead of
non-violent porn, which--if it inspires behavior at all (something
research states pretty clearly it does NOT do), inspires activities
that are of harm to no one.

>Or so one would gather from reading the past "morse testing as torture"
>postings seen here in recent years.

Well since I passed my own 20WPM test, I really can't argue
that testing is "torture." I don't happen to see any need for
it--today cw is far from the only reliable mode of communications as
it was when the requirement was created--but neither do I see it as
torture, just out-of-date.

On the other hand, it _does_ seem that the pro-coders are
enjoying their torture quite a bit. It's been over a year since
testing changed and they're _still_ sniveling about code testing! I
guess self-flagellation becomes habit forming after long enough.

Why not?

Simply because you (and I, for that matter) don't happen to be
attracted to S&M, why should OUR personal sexual preferences have
anything to do with acceptability?

It's totally unreasonable to argue that someone's sexual
preference is "immoral" or "wrong" simply because you don't personally
share it--that's the mark of the bigot, not of someone with any
integrity.

It IS interesting, though, to note that in our society it's
perfectly ok to pay someone to cause you pain, but not pleasure. It
sort of typifies the sick "morality" that permeates our culture thanks
to those who believe that THEIR moral values are the only legitimate
ones and that people must be protected from themselves. It's a sick
concept, but one very common to US culture.

> If you think so, then it's
>obvious why you think it's perfectly OK for Kim to practice self-degradation
>with her callsign.

And the fact that you believe that others should NOT have
their preferences recognized as just as moral as your own (after all,
they involve only adults and only consensual behavior) demonstrates
why you would find Kim's call sign objectionable--it defines you as a
self-righteous bigot in no uncertain terms.

Try living your own life and recognizing that others have the
right to live THEIRS w/o your judgement or self-righteousness, Larry.
It's FAR more offensive to any rational person to see amateur radio
"represented" by bigots than by people with a sense of humor!

Dick, when the ham world decides to elect you and Larry as our "guardians of virtue," that kind of comment will be appropriate. On the other hand, if you and Larry had that role, there are a LOT of us who would find ham radio had no interest for us at all.

Frankly, I doubt anyone would be HALF as offended by encountering Kim's call sign as they would be encountering your own self-righteous bigotry. You can play "Mr. Morality" all you want, but we all know that's just a way of denying that fact that you're small minded and a self-righteous prude who is so rigid in his thinking that he can't accept that others have as much right to THEIR opinions and values as you have.

And a criminal could say the same thing of others who are
intolerant of his criminal activities. Intelligent, well-educated
people do not have to approve of low class and bad taste.

No, it's touted as a communications medium, a hobby where
people can learn about communications, contribute to their community
in times of emergency, and enjoy a variety of interesting and often
challenging activities including both technical ones and casual ones
such as rag-chewing.

What it is NOT touted as is a haven for conservatives who are
unwilling to acknowledge that society is constantly changing and what
was appropriate fifty years ago may not be today.

Whether you consider "TIT" offensive or not depends on your
personal values. On the other hand the racism, hate speech, and
bigotry (including religious bigotry and prejudice against Islamic
people) I hear on the air IS offensive to any rational person. If you
and Dick would spend one-tenth as much time opposing racism and
bigotry as you do preaching religious morality (which has no more role
in ham radio than explicit pornography would have), you'd both do a
LOT more to further the hobby.

You find yourself offended when you think of Kim's call being
use on the air. I find myself offended when I hear the nut cases on
3950, or the religious zealots with their fundamentalist hypocrisy
discussing the "evil" of sex or the "evil" of Islam on their nets.
Somehow, I can't help but feel that the hatred I listen to has a lot
more potential to harm ham radio than does the light humor of Kim's
call sign.

> The ARS is always
>touted as a "family oriented" service, which seeks to attract young
>people in order to ensure it's future.

Partially true.

Ham radio DOES seek to attract young people. But until "Family
oriented" became a popular political buzz word used to further the
agenda of the Religious Right, ham radio was never defined as "Family
oriented."

> When the parents of these
>young people see a ham such as Kim, flaunting a callsign designed

>to call attention to her secondary sexual characteristics in an allegedly
>humorous way, they are not likely to get the joke.

Nonsense. Every time you turn on a TV set you hear FAR worse
than that--and very few Americans are calling for censorship there
(some are--but they are the extremists). No one but a prude would be
even mildly offended by that call--and no one but an idiot could fail
to see it as humorous.

> Therefore, the joke
>is on Kim -- and the ARS suffers yet another indignity, and is thus
>taken "...one step closer to extinction."

To be frank, if people with attitudes like yours and Dicks
represent the "right" view of ham radio, the ARS is past due for
extinction!

Grow up, Larry! This is the 21st Century--not the Victorian
era. Women have breasts and legs in our society, not "bosoms and
limbs." And it isn't going to hurt the little children one bit to be
aware of that fact--nor would it hurt ham radio if the moralists would
stop trying to dictate personal values to everyone and would, instead,
concentrate on acting like responsible people themselves.

And again, since you ignored my comment before, I'll make it
again: Precisely what makes it ok for you, Dick, and others to be
offensive here in rrap while simultaneously pretending you are
protecting the image of ham radio by slamming those who have done FAR
less to create a negative image of hams than either of you has done.
FAR more people interested in exploring ham radio are likely to turn
to the Internet for their initial impressions than to spend the money
to buy a receiver before knowing whether or not they'll find the
people interesting. And this newsgroup without question will reach a
LOT more potential hams than any conversation Kim might have on the
air. Why is the impression she gives (of a fun-loving, light-hearted,
humorous person who can laugh at herself playfully) harmful to ham
radio, while the impression you and Dick give (of inflexible,
old-fashioned, cranky, self-righteous, dour, moralists) "right?"
Frankly, I know which of those two impressions would be more likely to
attract ME to ham radio--and it isn't the latter one.

>I value freedom of expression just as much as you or anyone else
>in this newsgroup -- but I choose to use that freedom in a responsible
>manner.

By putting down a woman for having a sense of humor, by
insulting anyone who doesn't share your moral values, by offending
everyone who opposes cw testing, or by pontificating as though you
spoke for the ARS instead of just for yourself?

> Kim has not shown us that level of responsibility; she has
>chosen instead to act in a notably irresponsible manner, to the detriment
>of all of us who value the positive image of the ARS.

See what I mean?

You are claiming that anyone who doesn't agree with your
narrow-minded assessment of Kim's call sign and actions doesn't value
the "positive image of the ARS." Who elected YOU god?

> Moreover, she had
>the nature of the damage she was doing explained to her by no less an
>authority than Riley Hollingsworth, yet she chooses not to take corrective
>action.

Riley Hollingsworth is an authority on the FCC rules and
regulation. He is no more an authority on morality or human behavior
than are the group who meet on 3950 Saturday nights!

Simply because Hollingsworth feels something has the potential
to convey a negative image doesn't mean that it's a fact--only that
it's his PERSONAL impression. Many people, myself included, feel that
if Hollingworth wants to clean up the image of radio, he'd do a lot
better enforcing the rules concerning CB operations and freebanding
than concerning himself with issues that involve moral
judgement--something he is neither more nor less qualified to make
than any other person with a ham ticket.

> This bespeaks the true nature of her selfish motives. By
>defending her, all you do is bring your own credibility into question.

And by condemning her, all you do is bring your own
intolerance into the public view.

Although I no longer consider myself Southern Baptist, I was raised going to Southern Baptist church and I never heard any SB preacher state that Catholics were going to hell just for being Catholic.

>Our Southern Baptist preacher said the other Sunday
> that Buddah went straight to hell. Can you explain why a good man who
> died 300 years before Jesus was born would go straight to hell?

I would ask your preacher to attempt to explain that, and like any preacher, he can't. Religion today has gotten so far off course that it has become mostly smoke and mirrors and big business. Most of the wars throughout time have been fought over religious beliefs, millions have died in the name of religion, the current terrorism and war is about radical religious beliefs. Maybe religion isn't such a good thing.

One of Bill Mauldin's famous Willie and Joe cartoons for Stars and Stripes had them beholding a supply sergeant decked out in paratroop boots, a proper 50-mission crush on his new hat, and pilot sunglasses -- the haute couture of the Italian Campaign. Caption comes later.

I have often envisioned getting these characters together, staging the obligatory parade, and awarding them the BSC with fig leaf clusters. The medal weighs about 8 lbs from being cast in lead and has this cartoon on it with the lettering ORDER OF THE BASE-SECTION COMMANDO. The back side simply says, 'Promotion Proof'. I can see these bozos for the rest of their days at the Pentagon wandering around with paratroop boots, sunglasses, a 50-mission crush, and a medal that looks like a pie plate.

Spread your intolerance to a wider audience, Dick. After all
there might be a new, potential, ham reading this group who doesn't
yet know that the ARS is filled with bigots like you and Larry.

> September 11 will prove
>to be a turning point, the point at which I believe Western civilization
>will have begun to back away from the concept of "freedom of religion".

If you had it you way, the only religious tolerance you would
practice would be to allow people to choose which Christian church
they wished to attend.

> I say this after doing a bit of study on the basics of the religion
>of Islam. Those basic tenants include *total* lack of tolerance for
>other beliefs. Islam is both "THE" religion and the functional government.

Dick, if you studied for your ham ticket as thoroughly as you
"studied" the Islamic faith, you would have failed your Novice test in
the first place.

Islam DOES believe that its practitioners should live by the
tenets of their faith. So what? The religion is prominent in nations
where freedom of religion is NOT a Constitutional guarantee, and where
the population is far more homogeneous with respect to religious
variation.

You don't want to see religion mixed with government? Fine,
neither do I. So keep your OWN religious values (including your
so-called morality, etc.) out of OUR government here in the USA
instead of concerning yourself with the religious choices of other
nations.

> The
>superiority of Islam is fundamental. There is no room for any other
>belief system, anywhere on earth.

And Christianity grants equal status to other religions? Since
when are Christians any more tolerant of non-Christian religions than
Islam is of non-Islamic ones?

> All others are to be treated in one of
>three ways -
>

> They must be (1). Converted to Islam, or they must be
> (2). Subjugated, (enslaved) or they must be
> (3). Eliminated - That means killed,(except for women,
> children and slaves).

What a load of rubbish!

Read the Christian bible for examples of religious intolerance (i.e., kill whole populations because they don't accept their particular interpretation of a deity, etc.). Read the OT, the history of the crusades, or the history of the Inquisition and tell us some more about how _Islamic_ religions view others.

For the record, btw, only the Shi'te version of Islam (equivalent to the Fundamentalist Christian religions) practice religious intolerance. The far larger Sunni version (the religion practiced in most Islamic nations, including Saudi Arabia, Kuwait, etc.) believes that there are "many paths to Allah (God)" and that the path of Muhammed is the appropriate one for THEM to follow.

Your religion teaches tolerance, Dick. Perhaps you should start practicing your OWN beliefs before you attack those of others.

> Islamic law (which is at once the religious *and* civil law) dictates
>these actions to all who believe in Islam. These actions are *not*
>optional, they are divinely ordered to *all* who will follow Islam.

Bunk!

Read the Koran and you would know better than that.

Islamic law requires that Moslems practice the tenets of their religion, not that the force others to do so or kill them if they don't.

What a load of ignorant nonsense!

>"Jihad" is the term often used, but it is an all-out holy war on
>non-believers, nonstop, forever, or for whatever length of time it takes
>for it to be won.

Jihad is, specifically, a war against those who would seek to attack or subjugate Islam, Dick. The concept isn't really so out-of-line for a religion that was originally the target of Christian expansionism during the Crusades. And don't even TRY to pretend that the Christian religion doesn't feel just as strongly about defending ITS existence. If one is bad, so are both.

>For Islam. Believers are obligated to offer their own
>lives to the cause without reservation.

Read the Koran.

> This is for real. Delays, of
>whatever length, are only temporary. The war WILL go on, till it is won.

>Allah says so. As a Believer, you have no choice.

More crap.

Christianity is based on the concept that all religions but
Christianity must be wiped off the earth by war, right? What, you
disagree? But there's a LOT more support for that view in the bible
than there is for your absurd claims in the Koran.

Have you READ the Koran, Dick? Or is it easier for you to
accept second hand input about it' content? At least I've read the
bible that I take issue with (19 versions, as a matter of fact--and
five versions of the Koran)--something most CHRISTIANS haven't done
even once!

> So how, then, does a civilization (ours) which in basis depends on
>freedom of religion and separation of religion from government, begin to
>deal with a religion whose principles dictate the destruction of the
>very system which promotes tolerance of it?

Jail Jerry Falwell and Pat Robinson on hate crime charges?

Oh, sorry, I thought you were talking about OUR pet religions.

> How can that "religion" be
>allowed to prosper and spread, without causing the complete destruction
>of the free system that nourished it?

How can you call for suppression of a religion and even
remotely claim you support freedom?

Fascism was offensive in Nazi Germany, Dick. And it's just as
offensive when it's Americans calling for it.

>Is "religous freedom" to include a
>religion which dictates the destruction of all other forms of religious
>belief?

Of course not--so let's ban Christianity, ok?

> Here is an interesting and very revealing book on the subject:

Naw Cecil, what you were doing is comparing morse testing to Affirmative Action. The rest of this crap is simply diversion. Your inclusion of the word "incompetent" in front of the words "white teachers" makes your view quite clear if not necessarily true.

> > You do not live in a place called "Small Southern Town, USA".

You are perhaps the only individual here who would attempt to twist a typo into a lie. Feel free to trot out any of my other posts on the subject. I'm certain that you'd find the words "compare" or "comparing".

You're still stuck with the faulty analogy.

I've got my basic qualification as an amateur radio operator but I have yet to grab hold of any gear or even a call sign as of yet.

What I stopped here to say is that I am absolutely amazed at the level of conversation in this newsgroup. I had kind of always thought that everyone who had the perseverance and knowledge to become an amateur radio operator was someone with a bit more je ne sais quois over the average folk.

I mean, in days gone by before the Internet was a household word you might have been online with one or more bulletin board systems. And indeed there, and on the Internet, anyone with the sense enough to turn on their computer and have it dial another could post anything they wanted for all to see and show whoever would read how immature and petty and feeble they really are.

Now I see that there is no higher intellect even in the world of amateur radio where you're supposed to be qualified and probably should know the Morse code and obey a few basic rules of civility, that anyone can encounter just as many children on the airwaves as they can on any other public forum.

So here's my two cents for y'all to digest and fight over for the next century until your hobby dies - screw the Morse code requirement and let everybody on the air regardless - it doesn't raise anybody's level of intelligence or maturity and it certainly doesn't force anyone to be civil in a public forum, and as for a good means of communicating, it stinks!

I know it has its uses, but as most of the posts (hundreds in just a couple days) here seem to indicate, many of the people here haven't any uses for the common man. Just one more good reason why I shouldn't even bother spending the money, I guess. Probably was a really interesting hobby in the days when it was really about the interest and not about the inane and utterly useless banter seen around here.

Congratulations, you may now turn over your licences and become a normal moron like everyone else.

Byron

It isn't evasion, Kim. Your tacky choice in calls has absolutely naught
to do with Muslims or the WTC. You've made nothing challenging. If you
want to defend your lack of decorum, don't attempt to link it to a
disparate topic.

On 18 Nov 2001 09:12:20 GMT, Dick Carroll <dixie@townsqr.com> wrote:

> Precisely the point. If Islam is fundamentally and totally intolerant
>of any other belief system, and considers any other as evil and Infidel,
>then it is immaterial whether the "other" is Christian, Buddhist or
>Hindu.

Gee, Dick, aren't you the same person who refers to Islam as
evil or sinister?

Are you Islamic or do Christians practice the same intolerance
you accuse Muslims of practicing?

Incidently, few Muslims have any problem with Buddhists--and
the only prejudice against Hindus comes from internal stresses between
Pakistan and India--stresses that are political not just religious.

>They do seem to hate us Americans more, though, evidently for our
>secularism and success at accomplishing such a free nation.

Or, perhaps, it's because we keep interfering in the Middle
East, providing weapons to their enemies, and using their nations for
pawns in our political games.

In case you don't remember the fact, WE--not some
fundamentalist Islamic nation--trained Osama bin Laden and his
followers. We trained them, funded them, and ARMED them as a way to
oppose the USSR in Afghanistan. Now, of course, when our own actions
come back to haunt us (as they have done in other nations including
Somalia, etc.), we blame the religion of the region instead of our own
actions. If it weren't for the US, the Taliban would NEVER have
achieved power in Afghanistan in the first place so if you want to
point a finger at anyone, point it at US, where it belongs!

>Islam is
>clearly a very restrictive doctrine that abhors freedom of choice in
>almost all facets of life.

Hmmmmm . . .

Does that mean you're "pro-choice" Dick, or does a limitation
on freedom of choice only abhorrent to you when it is YOUR choices
that are being limited?

> Your life is to be lived for Allah and not
>much else.

And to a Christian, your life is to be lived for "God." What's
new?

> How in the world does such a belief system garner such a
>large following?

Ask Jerry Falwell, Pat Robertson, Oral Roberts, Jimmy
Swaggart, and Jim Baker. They were pretty good at doing so.

> One can only assume that all those believers know
>nothing else.

Dick, the only individual we can COUNT on knowing nothing else
is you. You're so narrow minded, self-righteous, and bigoted that you
couldn't possibly view any other religion as anything but a threat to
you personally.

> Please understand that I don't approach this as a contest between Islam
>and Christianity, I see it as an assault by Islam on every other belief
>system, as dictated by basic Islamic religious precepts. How else can
>one view it given the events of the past few months, coupled with all
>the earlier Islamic terrorist acts?

As terrorism, how do you THINK we should view them?

I suppose that since it was Islamic terrorists that performed
the acts we have to stamp out Islam in self-defense.

Of course, since Timothy McVeigh was a Christian (Southern
Baptist to be precise), we obviously need to wipe out Christianity in
self-defense as well.

Better get ready, Dick, once they're through with Afghanistan,
you're next.

>The intent of the radical wing of

>planes, in the air enroute, who did not carry out their mission, perhaps
>deciding they were not ready to die, after all- at least not right then.
>So when?

All this does is demonstrate your intense racism and religious
intolerance.

For someone who criticizes Kim for her call sign, claiming it
gives a bad image to the ARS, you certainly manage to give a vastly

worse one yourself. I would be _ashamed_ to voice such ignorant and bigoted views myself, but then again I've come to expect them from you.

> Agreed, but with the huge numbers of Moslems, it has become clear there
>will always be far more than enough radical strict constructionists to
>do a pretty good job of carrying out Mohammed's directives as instructed
>by basic Islamic teachings. Unless we defend ourselves. How to do
>that is problematic.

Let's just leave the middle east alone. That way they won't have any reason to attack us, and they can succeed or fail on their own. Pull our troops out after we finish what we've begun in Afghanistan, stop sending them weapons, giving them money, and training their troops, and use severe economic sanctions to force them to deal fairly with us in trade so they won't artificially raise oil prices too high.

Better yet, let's just make it clear that the US doesn't support ANY religion over any other (INCLUDING Christianity), eliminate any laws we have that are based on religious beliefs (blue laws, morality laws, etc.) and stop being the world's police force.

> And as I tried to point out, this becomes the very root of our peril
>when faced with a religion, which we characteristically must tolerate,
>which is intent on destruction of every other belief system, including
>(y)ours.

No problem, Dick. They'll always be intolerant people such as yourself around to "protect" us from the evil of open minds.

> That, again, is the root of the problem. Under Islam the two cannot be
>separated. So we wind up tolerating a form of government that intends to
>kill us off as evil infidels just because we MUST tolerate it as a
>religion! A quandary and total paradox if one ever existed.

You keep arguing that we shouldn't "tolerate" other forms of government. What does tolerance for religion have to do with tolerance for terrorism? That's like saying that because the US "tolerates" Christians we must tolerate the murder of doctors and bombing of abortion clinics!

Maybe if you would PRACTICE a bit of tolerance, you might see just how much of an offensive bigot you come across as in this ng.

> But the vast numbers of radical Moslems -and there ARE vast numbers of
>them, despite the also large numbers of Islamic moderates- see all that
>as just more reason to destroy us, as dictated by their strict religious
>beliefs. We are a sinful nation which doesn't even adhere to our own

>infidels anyway.

Have you thought about getting help for your paranoia, Dick?
You certainly sound as though you need it.

> Part of the problem is that Islamic radical fundamentalism is cyclical.
>Look at what happened in Iran in 1979. And now bin Laden, Al Queda and
>the rest. It is clear from Sept 11 that this is a particularly vicious
>cycle, one which could conceivably accomplish Allah's assigned mission
>-our destruction- if we fail to defend against it.

There IS no such "assigned mission," Dick. Read the Koran, not
the ramblings of a religious bigot like yourself.

> Certainly very true, but the difference is that Islam is the only
>totally intolerant belief which preaches and demands the eradication of
>all other belief systems.

Christianity doesn't?

What planet are YOU from?

>That alone places it into a totally different
>category when it comes to our response. We drop our guard at our peril.
> Basically Islam is different from any other religion in that regard,
>and can, maybe even must, be viewed as something other than a religion.
>Religions don't teach mass murder and utter destruction based simply on
>a differing point of view regarding the characteristics and wishes of a
>deity.

Crusades.

Inquisition.

Hitler's death camps for non-Christians.

Salem witch trials.

No, Dick, no religion except Islam teaches mass murder based
on a differing point of view of a deity. None at all.

Except, of course, your own!

> I agree that many Islamics are moderates and that the group which
>demands our extinction is a minority, at best. But when there are so

>elements instead of supporting them as so many clearly do. Examples
>abound, as the wealthy Saudi prince who tried to give New York a $10
>million check along with a lecture on how wrong we are in our Mideast
>policies. Where do you think he would stand in a all-out contest?

Depends on the contest. You certainly see him siding with us
about the Taliban.

What is so outrageous about his statements that we are "wrong"
in our Mideast policies? Do you honestly believe that WE know more
about the needs of the middle east than the RESIDENTS of that region?
Who elected the US as God? We act from national interests in the
middle east--not from any interest in actually _helping_ the nations
there. What's so strange about having a representative of one of those
nations say that publicly?

At least he offered $10M to help. How much do WE give other
nations when they suffer tragedies? How much did YOU give to help
survivors of the last earthquake in Asia--an earthquake that took ten
TIMES as many lives as the WTC attack?

Hypocrite!

> One cannot assume anything friendly about them when you know they are
>trained in the basics of Islam from infancy, and it is clear what those
>basics are.

And people wonder why the rest of the world fears our
thinking. Dick, if you were typical of our citizens it would make me
ashamed to be an American and to have worn our nation's uniform!

> It is difficult to avoid when Islam, the religion, is also Islam, the
>radical dictatorial government supporting our destruction, and Islam,
>our sworn enemy to-the-death, by the dictates of their most basic

>understand how any Moslem can reconcile his religion with friendship
>toward nonbelievers. It is in fact strictly forbidden in the Koran.
>There is a built in conflict that is always there, waiting to surface.

Read the Koran if you intend to talk about it. Otherwise you
just come off as ignorant.

> Oh- And "we" didn't set this up this conflict at all, on religious
>grounds or any other. THEY set it up - on religious grounds!!! If we
>attempt to avoid it as it presents, we fail.

No--one terrorist with money (most of which came from contacts
WE provided him years ago, along with his training as a terrorist) set
it up. VERY few middle eastern nations are siding with the Taliban
instead of with us DESPITE the fact that they are Islamic. Doesn't
that tell you ANYTHING? Or is your prejudice so ingrained that you're
incapable of objective thought at all?

> Do you *Really* think it is possible to truly align ourselves with
>anything that is Islamic after September 11, and all the Islamic
>terrorism that has gone before, knowing what basic Islamic law and
>doctrine are? It is one thing for some splinter group to go off on a
>tangent, but this is clearly not the case here, as shown in basic
>Islamic teachings.

More bull.

Provide quotes from the original sources to support your
claims, Dick, or stop pretending you understand the Koran.

I'll make you a deal. For every quote from the Koran that
teaches intolerance or violence against other religions, I'll provide
one from the Christian Bible (KJV). If you come up with the most, I'll
side with you about Islam. And if I do so, you'll stop posting your
religious bigotry in public where innocent people can see it. Fair
enough?

> So then, just WHO is the enemy and WHO is friend, within the Islamic
>community - a LARGE community of Believers who have been taught since
>birth that we -all nonbelievers- are their mortal enemy??? How will we
>tell them apart? I know, many of them would rather not face up to the
>internal conflict involved, but what will they think when decision time
>comes? Will personal wishes for a peaceful existence prevail over
>lifelong religious training and ingrained obligation, and guilt feelings
>because of their lifetime spent in avoidance of that obligation?

More bigotry.

Your hatred of others is getting really old Dick. Go back to
cw where we don't all have to be exposed to your offensive behavior.

> I truly wish that I could see some light at the end of the tunnel, but
>this one is a real thorny puzzler. To say that it leaves many Americans,
>as well as many others, uneasy about the future is an considerable
>understatement. I and a great many others believe the President is
>right- this won't be a short term scrap.

Of course not--he'd never be reelected unless he stretches it
out a lot longer than that.

The Christian bible, in many places, alludes to the lesson that we should not tie ourselves to the distractions of a material concern. We should be ever vigilant for evil that will try to divide our attentions away from God, and distract us from what is good and pure.

Adhering to the principle above, by what measure should one decide "enough is enough"? If I am to adhered to the principle above, would I not also condemn the beliefs of other religions--forsaking them to the Hell they create by virtue of their beliefs? Would that not mean that I must choose to ignore them in a time of need, in times of disaster, etc. For wouldn't it be the evil doing of Satan to create a circumstance in which I would be distracted from all that is good and pure in order to help those that are evil and sin?

I could go on and on. Read the bible. And, adhere firmly to what it teaches; you'll find yourself thinking some pretty evil things about a lot of human beings.

We westerners don't handle religious wars very well, Dick. You demonstrate why, quite obviously.

By the way, in your quick review of the Islam faith, you seem to have completely missed that "moslem" is the place of faith, "muslim" is the person of faith.

That you defend porn as harmless comes as no real surprise to me. I am surprised that you are gullible even to believe that one type of movie inspires behavior and that the other doesn't.

Naw.

He can't be a rapist, Cecil.

His attitude toward women's breasts makes it clear he's not
interested in women.

Of course his comments about encouraging children to
participate in his activities . . .

>Virtually every Sunday, our Southern Baptist Preacher says that if the
>US doesn't turn back to God it will be destroyed. Said preacher believes
>that terrorism is God's punishment for being a sinful nation, i.e. the
>terrorists are doing God's will.

I'll never forget Jerry Falwell's quote in the 1980s. He
stated:

"AIDS isn't God's punishment to homosexuals. It's God's
punishment to a society that would TOLERATE homosexuals."

Good, solid, Christian value, isn't it?

It's no wonder Dick thinks like he does, with his "leaders"
teaching that intolerance is a virtue.

> Incidentally,
>according to the Bible, I should be punished for uttering God's
>name.

Blame it on eating pork or not buying your spouse a dove to
sacrifice after her last menstrual period. If you avoided such simple
injunctions, how could you be expected not to use a name?

>Don't know much about the Bible, do you, Dick? What do you think is
>the purpose of missionaries? What do you think is the purpose of hell?

It's a place to tell people to go????

>May I point out that you have many, many evil thoughts. Should
>you be punished for them?

Why not--he expects others to be punished for theirs.

Then, by the same standard, anyone who subscribes to
Christianity is obligated to follow ITS teachings. And if you've
bothered to read the bible, you know that includes killing people for
adultery, or for showing disrespect to their parents, sacrificing a
dove to "purify" a woman after her period, totally destroying any
nation of people who don't accept the Judeo-Christian God as their
deity, requiring women to "submit" to their husband's will and
religious teaching, and any number of other wonderful actions.

What--you don't obey such rules? Then I guess you just aren't
as sincere about your religion as you accuse Muslims of being.

> And you, sir are a Damfool.

>my wife (or mother) not wearing a veil, nor did they even seem to
>notice it.

For the record (as you probably already know--but Dick
doesn't, I'm sure) the reason women are expected to wear veils by the
Shi'te sect (Sunni nations don't require a veil), as well as the
reason women are required to be _behind_ men in a mosque instead of in
front of them isn't based on a view that women are inferior. Instead
it is based on the belief that a woman is so pure that she can look at
a man and still keep her thoughts on Allah (God), while a man is so
naturally base that if he looks at a woman he will be distracted from
his contemplation of Allah!

Hmmmm . . .

If they're right, Dick and Larry are responding to Kim's call
sign in a _very_ predictable manner. They can't keep their minds on
spiritual matters when they are exposed to Kim's "TIT."

In a sense, he's probably partly right, Kim. Your personality
and character DO come out in the newsgroup. You demonstrate
self-confidence, self-respect, a sense of humor, lack of intolerance,
honesty and integrity here--and I would expect those qualities would
be equally manifest in the real world.

Of course, Larry and Dick aren't willing to acknowledge that,
like yourself, their personality and integrity come out here as well.
On the other hand, given the model they present, I don't think I would
want to admit it if I were them, either.

You'd find most people who know me as a friend, even those who know me casually, would say that I have a huge heart--and I do. I just believe very seriously in the "hard love" concepts. I don't believe in being an enabler; and I'm very hardnosed about people who I think are mean: bigots, racists, liars, etc. I don't care if the keep taking the next step as they get to the edge of the Earth. I would stand silently as they walk off. I have a son who is a racist. He's very close to being disowned; and I certainly have no pride in him whatsoever. Love? I don't know...I really don't. I think when I think of loving him--it is a reflection of when he was little and cuddleable. Now, I fear the day we'd confront each other in the race war he feels certain will come up some day.

At any rate, yes, I am a fun-loving gal, and laugh hysterically at myself all the time. I'll tell you just as quick as someone else about some mistake I made--and I'll generally be laughing about it (because it's usually pretty damned stupid!). My callsign, and me, bring laughs to a serious life and I am proud to do it.

Middle- and Upper-class churches hide their intentions well. You could say, in a more dignified manner. Since you love to slam me as "trailer park trash" I presume you view yourself as at the level of Middle- or Upper-class. In fact, churches with parishoners at that economic level generally prosteltize about being lily white and pure in their sermons.

I've been to both. I prefer neither.

You mean that I choose to see you as narrow minded and fixated
on "TIT" s?

Yup!

> On the
>other hand, I didn't choose that Dick is the most commonly used nickname
>for Richard.

Actually, it isn't. Rick is.

But even if it was, knowing the connotations associated with
the word and holding your extremely conservative views about any hint
of sexual content, real or imagined, in ham radio, I would expect you
to stop using such an obscene nick name and start calling yourself
Rich or Richard instead.

> And Kim *DID* choose to advertise her grossly overly ample
>anatomy via her titillating callusing.

Sure like attacking people over their weight, don't you?

There's a popular term for larger women, Dickie. It's "BBW,"
for Big Beautiful Woman. I don't know if Kim is overweight or not
(simply because you keep accusing her of being "grossly overly ample"
and other offensive insults doesn't make it true, obviously, since
that would require that YOU be an honest person, and we all know
better than that), but if she is her personality alone makes it very
clear that BBW would apply to her perfectly.

On the other hand, I can just as easily think of a suitable
target for TOM (Thin Offensive Man) . . .

> Yes, that's right - some people-in fact many people, regard all that as
>unpleasantly excessive, especially when the bearer flaunts it, and it's
>not really that attractive that it should be flaunted in the first
>place. Anyone with sufficient behind-the-scenes experience wil
>l already know that. It's illusory.

So now you're claiming to be an expert on Kim's breasts, Dick?

Somehow I doubt that. She gives every indication of having far
too much class to have an interest in you.

Must be just wishful thinking on your part.

Thanks--I'm glad it doesn't surprise you that I believe in
free speech--too bad more people in this NG don't.

It isn't gullibility, it's a willingness to accept research
evidence that demonstrates it.

I happen to TEACH psychology and sociology at the University
level--and both fields have made it VERY clear that it is the presence
of violence--not sex--that leads to antisocial actions (meaning acts
that violate the rights of others--not ones that offend their
religious morality but don't affect them directly).

Do I defend porn as harmless? No I don't. Thanks to the sick
"let 'em see blood and violence but not sex and love" mentality of the
American moralists, our adult films are limited to those that are the
most sexually objectifying of any made in the world. We don't even
attempt to make sensitive, caring, women-centered, erotic films
because the moralists would just demand that they be censored anyway.

There is inherently NOTHING wrong with human sexual behavior
between consenting adults. Those that see those behaviors as immoral
merely demonstrate their desire to impose their own outdated,
superstitious, beliefs on others.

>I guess you've missed the postings of Lenny-The-Licenseless and

How many have you polled? Catholics worship graven images of
the Virgin Mary, a cardinal sin which can only be forgiven by
becoming a Protestant.

> I would ask your preacher to attempt to explain that, and like any
> preacher, he can't.

My preacher has an explanation for everything and recently forced
a change from the Texas SB Convention because some people there
believe that the Bible may not be 100% literally true. For instance,
the dinosaurs could never have lived because man was created on
the seventh day. God laid down the dinosaur fossils during that
week of creation. The preacher doesn't know why God did that but
he says it is a sin to question God's motives.

He could but he would be wrong assuming there's a victim of
his crime. People who use force or threat of force are violating
a basic right of man. OTOH, there is no crime or victims
surrounding Kim's cutesie call. One human being's idea
of bad taste is another's idea of fun. To each his own.
What is wrong with live and let live? How would you like
someone attempting to change your way of life because
they consider you low class and tasteless?

I don't know about that. I suspect it is something much more simple - the local school board, and even the state board of schools, are simply afraid to bring up the issue. Every time the issue was raised in the past, a fire storm broke out (screams of racism, with the resulting inquires from the feds who oversee federal money to schools). Since the federal money received is dependent on affirmative action hiring, and protests from parents over an out of control affirmative action program has no real consequences, they have simply taken a hands off attitude. The result is that it goes on forever.

>And it is obvious some have no value in their judgments.

Very true. All you have to do is look at the posts by Dick,
Larry Roll, and yourself to know that.

>And a criminal could say the same thing of others who are
>intolerant of his criminal activities.

Depends on how you define "criminal." If you define it to mean
"in violation of the law," I agree with the criminal. Of course, since
I spent two back-to-back 90 day sentences in Selma AL in the 1960s for
drinking from "Colored only" water fountains (the second one as I was
being processed out in the court house), I'm obviously one of those
criminals, so my opinion is somewhat biased.

> Intelligent, well-educated
>people do not have to approve of low class and bad taste.

Intelligent, well-educated people don't BELIEVE in
discriminating on the basis of class in the first place. More
importantly, your bias isn't based on education in the first
place--that invariably leads to tolerance. It is based on your
religious beliefs--as represented by your moral values--which are
purely subjective and have no more validity in dealing with the
behavior of others than do your bedroom habits!

There's a world of difference between "making a judgement" and
"judging others." We all make personal judgements--but none of us has
the right to judge others and claim that our judgement is valid
because in some way our moral values are superior to their own.

Actually, I think the attitude adopted by both groups ("blacks" and "whites") here in the deep south (central southern states - NC to GA, GA to TX, TX to MO, MO to NC) is fairly healthy. Basically, by what seems to be mutual agreement, both groups have taken a hands off approach to the matter. Both groups may run their mouths when not in "mixed" company, but get along fairly well when together. Whatever the case, there are a lot less racial problems here then elsewhere in the country - you don't see the race riots, for example, of Florida, California, or the Northeast, here (yet minorities are a larger percent of the population here).

Like any other function of government, some is good and some is bad.
Some evolve over time from being good to being bad. IMO, that applies
both to Affirmative Action and Morse code testing.

What's the matter, Steve?

Don't like hearing that the conversations in this newsgroup
have an influence on new (and potential) hams?

You're right--this ISN'T governed by part 97. But if the hams
who participate here and delight in demonstrating bigotry and a
holier-than-thou attitude sincerely believe they aren't influencing
newcomers far more than, for example, Kim's call sign, messages such
as the one you just flamed do a pretty good job of demonstrating the
fallacy of their beliefs.

I hope you're a _little_ more considerate with new hams on the
air than you are here. From my perspective, I think he had some pretty
good points and certainly didn't deserve to be flamed for voicing
them.

I for one am quite adjusted to the demise of code testing. When I did my twenty in the seventies I thought before and after that there was no excuse then for anything over 12 but waited until after the fateful Tuesday to shoot off the old bazoo. As a testing criterion it is long obsolete but its value in stirring up the court eunuchs and bawling children is priceless.

Then by all means lets shut down our colleges and
universities. After all, in those "corrupt" establishments ANYONE can
learn how to build an amplifier for 11m--or to DESIGN one for that
matter.

The simplistic solution is to conceal information. The
intelligent one is to make information freely available and only
punish those who misuse it.

Fortunately, despite the influence of the right wing
extremists in recent years, our Constitution still supports the
intelligent decision instead of the simple one.

If it's "aiding and abetting" to provide publicly accessible
information to cbers, then someone managed to turn the Constitution
into a roll of toilet paper and a democracy into a fascist state while
I was sleeping. Sorry, but I'll take my chances on openness and
honesty instead of secrecy and distrust.

You mean Jaysus don't you? We make judgements every day. By some
definitions a gentleman is he who ignores the trivial but is a cast iron SOB
about things that matter. Kim's call sign is one of those juvenile, tee hee
giggle things most of us outgrew years ago but they are so common it is like
stepping on ants so I leave it alone. Making judgements is one thing, being
judgmental is quite another. Rick is so open-minded the wind whistles thru
and his only judgement is on those he perceives as being judgemental.

> Apples and oranges, Dick. I equated radical Islam with radical
> Christianity, not with the Christian mainstream.

And of course the critical point flew right past you, as I knew would,
as many times as I repeated it in those several posts.
That point, repeated yet one more time for the slow witted:

**Islam is the ONLY religion which dictates that all people under other
belief systems are to be either converted, subjugated (enslaved) or
eliminated (Killed).**

What is it about this simple statement that so difficult for you to
grasp?
Souithern Baptists exhibit no less zealotry in their efforts to convert
others but nowhere in their governing documentation do I find anything
about enslaving nor killing the recalcitrant.

I would be
> willing to bet that the majority of KKK terrorists were/are
> Southern Baptists.

Entirely possible, of course, since they are all in the South and so is
the Southern Baptist church. Your point?(with relation to my above
statements)

It's a sure bet that the abortion clinic
> bombers and abortion doctor murderers are Christians. As I
> understand it, allegiance to Christianity is a requirement
> for membership in the Aryan Nations.

Wouldn't be a bit surprised. How exactly does this play into the
singular difference that is Islam, to wit: Convert 'em, Enslave 'em or
Kill 'em??

> What do Christian terrorists, Jewish terrorists, Muslim
> terrorists, and atheist terrorists have in common? If that
> question is beyond your comprehension, I will explain further.

I already explained, yet one more time, the difference of note. If you still don't understand I can always try again, somehow I might find the right combination to turn on your light.

Naw--reading the kind of infantile nonsense you write once is
plenty--twice is FAR too much!

> NOWHERE did I say or even suggest anything about morality - the entire
>objection to Kims "Tittys" callsign is that it is TACKY and TASTELESS.

Er, not to burst your bubble, Dickie, but where did your
definition of "tasteless" or "tacky" come from in the first place if
not from your moral values?

Unless you are arguing that Kim's call sign has no flavor (and
if you are, I'll agree with that), then calling it "tasteless" must
mean you have some standard of reference to compare it to. In your
case, you equate the presence of a very mildly suggestive term, "TIT,"
in her call with being tasteless and tacky. Thus, by necessity, you
find reference to sexuality tasteless and tacky. That HAS to come from
SOME source besides pure speculation, and since it deals with a sexual
topic, that source is, again by necessity, your moral values.

>Sorta like you and Cecil, too. You have no CLASS. Got that? NO CLASS.

Gee, Dick, I guess you don't know what that word means,
either.

Class refers to one of two things; station of birth or station
in life.

I was born into an upper-middle class household--so that can't
be what you're referring to.

And since I have two PhDs, an MBA, and employment as a college
professor and therapist, by any stretch of the imagination I represent
upper-middle class today.

Hmmm . . .

I guess _we're_ not the ones who lack class after all.

>Trailer trash.

As often as you use that term, you must really have a thing
for people who live in mobile homes. Any particular reason, or do they
just typify those who are "beneath" you economically?

Not to burst another of your bubbles, but there are people living in mobile homes who are millionaires (I know several who do just that) and who prefer the security and convenience of having a mobile (or, more commonly, multiple mobiles in different areas) instead of a high-upkeep house.

Even those who buy inexpensive mobiles don't deserve your viciousness, however. Not everyone starts out with a decent income--many young couples have the choice of renting an apartment or buying a mobile--and it certainly doesn't make them "low class" to make the choice to be home owners instead of renters.

>The ARS can and should do better. I'm sorry you all can't.

We are too, but we're stuck with you.

I would strongly advise finding a good source for EL 509 and 519
tubes.
When you see what it is going to cost you when you drive this beast
beyond
about 150 watts on Antique Modulation you may well rethink the
purchase.

This may well be a fairly clean amp as they go but as with any
broadbanded
tube amp, you are well advised to run it with a good lo-pass filter in
the
output.

As you get the schematic and parts list, in European nomenclature, it
should
not take much to figure out how to mod it.

You might want to find out exactly where it was built. For $170 it
may well
have been Outer Mongolia.

Damfino but there is no good reason it couldn't be done. There is
enough
drive available for two in parallel in AB1.

Subject: Re: Linear Amp Question please:
Newsgroups: rec.radio.cb
Date: 2001-10-15 21:07:37 PST

Without reference handy, the 4CX250 should have a current draw on the
order
of 2-3 amps so a .3 drop should take about .1 to .2 ohms at something
over 1
watt.

Curious to see how you solve the problem.

Liquid sodium cooling maybe??? Running outside makes some sense but it
ain't going to happen with sheet metal. For no better reason than the
press-fit diodes would be in trouble when the aluminum expands and the
holes get bigger. Talk about a really catastrophic failure.

With the exception of the fact that I _also_ oppose any
behavior that directly harms the person or property of a
non-consenting individual, I agree completely. I _am_ open-minded and
willing to look at everything with an open mind instead of judging
others because I don't, personally, choose to indulge in the same
behaviors they themselves prefer.

On the other hand, I don't happen to view open-mindedness as a
flaw as you appear to view it. To me, it is the CLOSED-minded person
who demonstrates a serious character flaw.

I'm will place tongue firmly in cheek to respond. Of course, you're absolutely right about the above, but you need to understand the American feminist mentality. From their perspective, since men are so weak (as described above), it is indeed the men who are forcing women to wear veils. If men were stronger, the women there wouldn't have to wear veils. So, in the end, it is the men's fault (everything perceived as bad is). At this point, feminist usually drift off into their common fantasy of a world without men - a world where women run around naked in a tropical paradise, have sharing sex with each other (not like the "rape sex" between men and women), and so forth.

I know that paragraph probably doesn't make much sense, but you try to explain the feminist mentality better. I haven't taken the advanced course in feminism yet (a subscription to Cosmo).

False.

It not only does NOT dictate that, but a religion exists which
DOES do so--Christianity. Read the Old Testament, if you disagree.

> What is it about this simple statement that so difficult for you to
>grasp?

It's complete lack of accuracy, probably.

> Souithern Baptists exhibit no less zealotry in their efforts to convert
>others but nowhere in their governing documentation do I find anything
>about enslaving nor killing the recalcitrant.

No one is talking about the "governing documentation" of a
religious sect, Dick. You refer to "Islam," not to "a radical sect of
Islam," a very different thing.

It isn't the "governing documentation" that counts--it's the
direct source of the religion. In the case of the Southern Baptists,
that's the Protestant version of the bible and in the Islamic faith
it's the Koran.

Cite the KORAN, not the opinions of a biased Christian, if you
claim to present the views of Islam instead of just your own
prejudices. But be prepared for the Christian bible to be thrown back
in your face when you do so.

> Wouldn't be a bit surprised. How exactly does this play into the
>singular difference that is Islam, to wit: Convert 'em, Enslave 'em or
>Kill 'em??

Well, the concept that if someone disagrees with your moral
values with respect to abortion, you have the right to kill them for
it sounds a LOT like the kind of things you're accusing Muslims of to
me.

> I already explained, yet one more time, the difference of note. If you
>still don't understand I can always try again, somehow I might find the
>right combination to turn on your light.

The only difference is that you personally identify with the
Christian terrorists but not with the Islamic ones. Face it, Dick,
you're a religious bigot as well as a racial and sexual one.

> You are simply the king of all dumbasses.

What an "astute" observation. Dick, you are _really_
demonstrating your "class" clearly in this discussion--now everyone
can see why you feel as you do about Kim's call sign.

Not condone, you understand, but see the cause.

Al Davis, MGP of the Oakland Raiders, had so convinced the league that he had all sorts of information sources that one owner accused him of knowing the serial number of the Unknown Soldier.

At one Super Bowl, the opposing team's head coach -- convinced the locker room was bugged -- spent halftime on a ladder talking into the sprinkler heads, "Fuck you, Al Davis. Fuck you, Al Davis." His team, of course, got creamed.

Phil, you have earned an enemy, and a classless one at that, but rest assured you are in good company.

Kim:

Yet another futile demand for me to "prove" something. I have *nothing*
to prove, Kim, because I did not choose to select a Vanity call sign that
was assessed by Riley Hollingsworth as capable of taking the ARS
"...one step closer to extinction." In case you haven't noticed, this
thread is about you and your callsign -- not me. If you truly believe your
callsign is harmless to the positive image of the ARS, then YOU prove
it. However, be warned -- Mr. Hollingsworth's words will always be there
to haunt you!

>I am not easily offended and you
>have offended me more times than I can count.

Cecil, you are a prototypical liberal offense-taker. Only now, you
also call your credibility into question. I'm starting to think that you,
like Rick "Junior" Adams, have some kind of personal axe you'd
like to "grind" with Kim!

>I am ashamed to
>be a member of the same organization as you.

If you're referring to the ARRL, I'm sure they'd gladly accept your
resignation. If you are referring to ham radio in general, I'm sure
the FCC would gladly cancel your license upon it's return. In
either case, feel free to tell them why.

>
> Why not?
>
> Simply because you (and I, for that matter) don't happen to be
>attracted to S&M, why should OUR personal sexual preferences have
>anything to do with acceptability?

Well, speaking only for myself, my values are based on traditional,
conventional morality -- which doesn't allow for the "acceptance" of
deviant sexual behavior. Therefore, I feel fully justified in making a
negative "judgment" of such perversion. You see, I don't belong to this
New Age cult of people who don't think it is right to be judgmental. I'm
judgmental as all get out, and damn proud of it! If you can't see your way
clear to judge people for their negative, anti-social behavior, then don't
worry -- I'm more than capable of doing it for you!

> It's totally unreasonable to argue that someone's sexual
>preference is "immoral" or "wrong" simply because you don't personally
>share it--that's the mark of the bigot, not of someone with any
>integrity.

Actually, it's the other way around, but you seem to lack the maturity
or intellectual integrity to understand the difference.

> It IS interesting, though, to note that in our society it's
>perfectly ok to pay someone to cause you pain, but not pleasure. It
>sort of typifies the sick "morality" that permeates our culture thanks
>to those who believe that THEIR moral values are the only legitimate
>ones and that people must be protected from themselves. It's a sick
>concept, but one very common to US culture.

And after having said all that, you can't see your way clear to condemn
it? Well, Junior, maybe when you grow up, and don't think you need
to follow the crowd in order to gain acceptance, you'll develop some
independent thought. Until then, you'll continue to sound like the
weak-willed wanker you are now.

>> If you think so, then it's
>>obvious why you think it's perfectly OK for Kim to practice self-degradation
>>with her callsign.

>
> And the fact that you believe that others should NOT have
>their preferences recognized as just as moral as your own (after all,
>they involve only adults and only consensual behavior) demonstrates
>why you would find Kim's call sign objectionable--it defines you as a
>self-righteous bigot in no uncertain terms.

Well, Junior, I can live with being thought of as a self-righteous bigot
by the likes of you, because what you think of me doesn't mean a damn
thing to me in the first place!

> Try living your own life and recognizing that others have the
>right to live THEIRS w/o your judgement or self-righteousness, Larry.
>It's FAR more offensive to any rational person to see amateur radio
>"represented" by bigots than by people with a sense of humor!

Tell you what, Junior -- you worry about yourself, and don't worry about
me! I don't stay awake at night worrying about what people like you
think about me. I don't expect that to make you stop whining, but at least
you now know that you have the option of making better use of your time.

Rick:

Boy, do you ever have the hots for Kim! After reading the last few new posts in this thread, I think that the two of you need to be left alone -- and not at Starbucks! BTW -- I wonder how Kim's OM would feel about hearing that his XYL would want to meet another man at Starbucks for a day-long session of "philosophical discussion?" I know one for damn sure -- if I were married, my XYL wouldn't have to worry about me ever doing that with another woman -- unless she was there as well! I think we've just seen another example of Kim's character -- or lack thereof -- which makes her a perfect match for you!

> Looks like you are NOT a good
> Christian, Larry, (snip)

Actually, you're applying those passages wrong, Cecil. You're ignoring the bible passages about knowing sin, knowing the sinner, and separating from that. The difference is between action and thought. Obviously, the christian has to know what sin is if he is to avoid it (a judgment). Likewise, the christian has to judge whether another person is sinning if he is to avoid participating in that person's sin (another judgment). However, that doesn't mean the christian condemns that person by actions (you passage above). Instead, he is to seek out that person and help the person to understand the consequences of those actions. The first step in that is making the person aware of his own sin.

The popular story of the woman being stoned for prostitution is a good example of this concept. Jesus stopped the stoning and told those in the mob to let the person without sin cast the first stone (a variation of your "Judge not, that ye be not judged"). In other words, he stopped the ACTION of the mob. However, after the mob went away, he turned to the woman and told her to go and sin no more. He could not have said that without making a judgment that she had indeed sinned.

So, as you can see, you can judge whether a person is sinning (in fact, it is almost impossible not to). But the key is what you do about it - the actions. The passages you quote above refer to actions, not to thoughts or simple statements.

By the way, please don't ask me for the bible passages - it has been a very long time since I've had anything to do with religion.

Ewwww, I don't think that's healthy at all. I really don't. That each
"side" would ignore the other's differences can only lead to trouble in the
end. While I don't think confrontational attitudes are healthy, either, I
would hope that people argue out their differences and explore their
similarities with each other.

My son claims there will be an all-out race war--one that affects the entire
nation. I don't believe him. My stomach turns every time we speak and he

rambles on about it. I always try to reason with him by asking him what he would do in a war situation to know that I don't share his beliefs. He's never directly answered that question for me. I like to believe it is because he cannot confront that he is not as "bad" as he thinks he is, and doesn't want to admit to himself.

Yep, I think that I'd rather see challenging dialogue. It will lead to much more understanding (if everyone is adult and unlearns bad habits).

Oh good grief, Larry. Haven't you ever wondered why you can't keep a woman around? You are so prudential. My husband sits not 5' away from me, in our office, together. I occasionally read posts to him; he is well aware that I would meet Rick, any other man, any other woman, or a whole host of people, at a Starbucks or otherwise.

I don't "ask" my husband for permission to do anything, Larry. We don't treat each other as children. Apparently, you like your women brainless and they like men who run their lives.

I have to say, he has a point... For the truth is, some HAMs are still cbers and use the information to use on CB Radio. One case in point, KD4MMM Robert who never talks on HAM bands really got it to buy amps from HAMS to sell at a higher price to cbers mostly the blacks that run channel 6 here in Lakeland, FL. He runs Channel 34 by the name of King Kong most of the time running a 500 or 1000 watt amp to show and soon sell to some would be CBer with the right amount of cash...

Another, WD4HFD John, Big John on the CB. He buys, sells, and repairs Ham gear to be used on CB Radio.. Radios, Amps, ect.. he also will repair CB as well....

So what you said, would be nice but will never happen....

Ask NASA's JPL what they use to communicate with their space probes.
It's not morse code. JPL's system gets thru when Morse or anything
else would not.

We should ask NASA and JPL what modes they use to communicate with
deep space planetary probes. It's not morse code. Maybe we should
(if we haven't already) adopt a version suitable for HF for DXing when
even morse code CW doesn't get thru. You may need a specially designed
for the purpose HF radio, but special transmitters existed for CW use.

I suppose it is my loss, but the teacher just said "memorize this
poem". Next day we parroted it back. Then we moved on to
another topic. *NO* explanation or analysis of said poem.
As if it was just a mental test pattern.

From what I can remember of grammar school, most
teaching was aimed at getting us to score higher on
the yearly achievement tests.

Not to worry, I did get some culture in high school and
college. Not a lot, but some....

What's a bitch is that I suggested that you look over my other posts in the thread and see that I used the words, "compare" and "comparing" in all of them. Now you'd like to play stupid. I've already posted the one where you made the comparison after denying that you did so.

Only the old hard core Catholics do that sh_t anymore. Most of us just pray to God (includes Jesus) and leave it at that. And the Catholic Church has been admitting that past errors like Crusades and inquisitions and such were in fact wrong.

I have already said I don't speak for a large area and that it is
simply my opinion based on my experiences. Show me some evidence
otherwise and I might change that opinion.

Certainly depends upon one's actions in that adult sexual behavior.
Watching it in a porn film lowers the viewer to the level of voyeur.
As to some of the acts depicted, I guess it sometimes depends on whether
you're kicking off or receiving, huh?

I did not deny comparing Affirmative Action and Morse code testing.
They are certainly comparable. I denied comparting Affirmative Action
and Morse code testing of which you accused me and then lied about
doing it. I'm still waiting for an apology. I have never in my entire
life comparted Affirmative Action and Morse code. If you have any
proof whatsoever that I have ever comparted those subjects, please
present it. If you cannot, we all will assume that you were lying
through your teeth when you accused me of comparting.

You sure don't learn very fast, Larry. The onus of proof is upon
the person who asserts the positive premise. That's you. Here's
the premise: 'Kim's callsign is harmful to the ARS.' Hop on that
onus and show us your proof. Just as it is impossible for you
to prove that you are not a rapist, it is logically impossible
to prove that Kim's callsign is not harmful to the ARS.

> self-apparent.

For shame, Larry, petitio principii is not allowed.
You are the one making the assertion. The onus is upon you
to prove your assertion. If you cannot offer any proof, we
will be forced to conclude that you are full of it. Exactly
what damage is being done to the ARS by Kim's callsign?

Here's your argument applied to you, Larry. If you cannot
prove that you are not a rapist, then that you are one is
self-apparent. Don't you ever learn?

Do you have references you can cite for your assertion?

I've known and worked with people from that religion and
they got along with us Americans just fine. And they
practiced their religion just like Christians do, like fasting
during the daytime during their Ramadon(sp) holy
month, similar to Catholic Lent, etc.

I agree in this limited extent: Just because one has mastered certain skills to communicate with others in ways that most people can't doesn't mean that such a person has anything worthy to say. Skill does not equate to content.

Hopefully, now that we have nearly won the war there, we
can win the peace. That we don't f_ck it up again. That
we can give them just enough help (and not more) so that
they can build their nation themselves that turns out to be a
good place for all of them. Whether or not it can actually
happen, well....

Now if they could just get those probes to stop cratering into the
surface of the planets they visit, we could see all of this great
communication in action!

That is absolutely absurd, Dick. Your own religion dictates that all
people under other belief systems are to be either converted, subjugated
(enslaved) or eliminated (Killed). It is all right there in the Bible.
There is no more reason to believe that civilized Muslims follow the
literal orders in the Koran any more than civilized Christians follow
the literal orders in the Bible.

> What is it about this simple statement that so difficult for you to
> grasp?

It is an absolute lie, that's what. Your very own Bible advocates
in reverse virtually the same thing that the Koran advocates - killing
and conquering in the name of Jehovah.

> Souithern Baptists exhibit no less zealotry in their efforts to convert
> others but nowhere in their governing documentation do I find anything
> about enslaving nor killing the recalcitrant.

Read the Bible, Dick, read the Bible. It's all there. The Israelites
sacked Jericho for no other reason than conquest of non-Israelites.

> How exactly does this play into the
> singular difference that is Islam, to wit: Convert 'em, Enslave 'em or
> Kill 'em??

Dick, that's exactly what Christians have been doing for 2000 years
and what the Bible tells Christians to do. That we don't do it anymore
is a tribute to civilization which had its birth in the Middle East.
The Toran reflects the invasion and rape of the Muslim lands at the
hands of the Christians. Civilized Muslims recognize that the Crusades
are over even if you don't possess the intelligence to realize it.

The last time people tried to "argue out" their differences here, there was almost a war in the area (remember the images of NG troops, riots, and so forth). Compared to that, what exists now is downright healthy. Besides, I think it allows each group to explore the other without bringing anything to a head - it's more gradual and less threatening.

> My son claims there will be an all-
> out race war--one that affects the
> entire nation. (snip)

It's a possibility, Kim. We're the first country, in the history of mankind, that has been successful (so far) at bringing so many nationalities together in one place without breaking up into endless civil wars. However, many believe it's only a matter of time and we're quickly approaching it. So, while I won't say it is going to happen, based on history, I'm certainly not going to dismiss the possibility either.

Anyone who thinks "we have won" anything over there is sadly mistaken. We (Americans and many other nations) don't believe, fight, and defend with the same passion and commitment that those fanatics over there do. We are more civilized than that. It is our very nature of civility that will keep us from winning anything from them that is more than brief.

>Personally, I'm not so sure.

Why not? FCC has made it VERY clear that the treaty is the one and only reason they kept 5 wpm. They specifically addressed all of the other reasons for code testing and said, in effect: "That's nice, but it's not sufficient reason for us to keep the code test". Only the treaty requirement was identified as sufficient reason.

Take away that reason, and by the FCC's own statements, there is NO reason. End of story. Unless the FCC changes their mind or acts illogically.

Rick Adams <adamsr@NOSPAM.voyager.net> writes:

>It's one thing for hams not to support or condone the use of
>illegal amps by cbers--but not freely providing information goes
>contrary to a central principle of amateur radio--that of the free
>exchange of information and the education of others in radio
>technology. Sure the information is being misused--but it isn't the
>responsibility of a ham to determine HOW information is going to be
>use, only to insure that his/her information is accurate and honest.

What you're saying, Rick, is that a person giving out information bears no
responsibility for what is done with the information. That idea misses a key
point: does the information-giver have any expectation that the information
will be misused?
>
> If I tell a cber how to build an amp for 10m, for example
>(which, btw, I don't do), I'm not doing anything a good book on
>electronics theory--or an early version of the ARH for that
>matter--wouldn't tell him or her.

You are doing something VERY different if you have any reason to suspect that
the cber will use the amp illegally.

>It's the cber's responsibility not
>to use that information illegally by operating on 11m with more than
>5w of power--it isn't my responsibility not to communicate factual
>information to prevent him/her from doing so.

Yes, it is - IF you have reason to believe that the information will be
misused.

The Sept. 11 hijackers learned to fly airliners at flight schools in this
country. Let me say up front that the flying schools had no idea what the
hijackers would do with their flying skills.

Apply your concept of "it isn't my responsibility not to communicate factual
information to prevent him/her from doing so" to flying schools today, in the
wake of Sept. 11 You are saying that a flying school should bear no
responsibility for what the students do after graduation even if the school
knows there is a chance they will repeat the actions of Sept. 11.
>
>In this nation we often end up blaming people for teaching
>others things that they later use illegally. It's time we stopped
>blaming the teacher and started putting the responsibility squarely
>where it belongs--on the learner who misuses the information.

No. Wrong. It all depends on whether the teacher had reason to suspect that the information would be misused. In most cases the teacher has no clue.

If representatives of Saddam or OBL seek information about how to make and use chemical, biological or nuclear weapons, should they simply be given the information with no concern for how they might use it?
>
> Besides--if we refuse to share our knowledge, how can we ever
>expect to encourage cbers and freebanders to take the time to become
>hams and operate legally instead?

By demonstrating what hams do LEGALLY, not by helping them break the law.

>I regularly demonstrate my station
>to friends who are cbers (and at least one I strongly suspect is a
>freebander)--including the operation of an amplifier. I then
>demonstrate how efficient ham radio is compared to cb or freeband--by

>won't show them how they work would ever do.

>More than one person I've
>demonstrated that to is now a qrp operator who enjoys seeing how LOW
>s/he can reduce the power and still make international contacts
>instead of trying to pump out a couple KW to talk to someone across
>town.

That's great, Rick, but it's not the same thing as showing someone how to build an amplifier suitable for cb use. Not the same thing at all. In fact, what you're doing is discouraging amplifier use by demonstrating what can be done legally without one.

>Exactly
>what damage is being done to the ARS by Kim's callsign?

That's easy, Cecil.

Callsigns like Kim's make the ARS a little less G-rated. Many prospective hams and the parents of prospective hams will have a less-positive impression of ham radio after encountering such callsigns. It would be better for the ARS if hams did not pick such vanity calls because they are inappropriate for the ARS.

It should be noted that not only did Kim pick out that callsign, but she recommended similar callsigns to others as vanity calls.

It is perfectly clear from reading Kim's posts that she chose that callsign for its attention and giggle factors, and doesn't see the harm in it. The only way she would give it up is if the FCC revoked it. That's probably not gonna happen, because the FCC doesn't forbid such callsigns, and Kim doesn't change her mind very often.

So the operative question is: Which is the lesser of two evils - callsigns like Kim's, or having the FCC enact and enforce a list of forbidden ARS callsigns?

You are mistaken, Cecil. Catholics don't worship graven images.

The purpose of statues and pictures in the Catholic faith is to remind the faithful of the person depicted and what they did. Nothing more.

Most Protestant churches I've have pictures and statues, too.

What I don't like "hearing" is some Anonymous Troll who pops in and lays an egg like that one, Rick. It's the knee jerk reaction to something that HE didn't agree with, and then he makes a sweeping statement that would "condem" all of Amateur Radio because of what transpires here.

By the way, I think it was Jim Rosenthal who did the math and figured that the "population" or RRAP (at least the regulars) represented about 0.017% of the Amateur community...hardly representitive, now is it?

>I hope you're a _little_ more considerate with new hams on the

Except that on the fucking CB you can't fucking hear the fucking
traffic reports over the fucking bullshit, goddammit motherfucker.

Granted, the QRM on some of the local repeaters has gotten that bad at
times, but only until the problem is DF'd and 'fixed.'

At least on the ham bands, you can get traffic from a halfway
intelligent source without the extraneous commentary, or some bozo
deadkeying his 1kW rig. Even what little usefulness the broadcast
stations had is pretty much gone now that their helicopters are
grounded.

You couldn't be more off the beam than you are with this post, Tugboat.
Some of us rise above our beginnings. It helps to have parents who are
loving and involved in our upbringing and who provide guidance during
our formative years. My dad, for instance would never have permitted me
to choose a suggestive callsign back in the days when I first entered
amateur radio. I'm also pretty certain that, had he heard some of the
present goings on in the 75m band, he'd not have permitted my
involvement at all.

Seems to me we already have an over-abundance of prudish narrow-
minded holier-than-thou people in ham radio. :-) Do you have
any proof of your assertion?

Since when is amateur radio subject to a rating system? The FCC certainly
didn't think so when they issued the callsign.

> and the parents of prospective hams will have a less-positive impression
of ham

Like professional atheletes, it is not mandatory for hams to be role models.

The FCC is the final arbiter as to their offensiveness.

I know that, Jim, but it doesn't matter. What matters is my
Southern Baptist preacher, and a host of others, often state
from their pulpits that Catholics worship graven images and
are going to hell. I, personally, don't believe there is such
a place as hell (or heaven for that matter). I was just (tongue
in cheek) repeating the Southern Baptist party line above.

Sorry. I'm coming into this late, and with over 250 postings, I can't

> >that's any consolation.

This is a very difficult problem. I don't agree that Kim's callsign is
patently offensive. Further, I seriously doubt that many people would
really keep their sons, daughters, grandchildren from entering amateur radio
because of it. Is my call sign -- KC8SIK -- offensive? I can imagine
what some people might think about -- I really can, because I'm not real
fond of being 'sik' myself. Yet that callsign was given to me out of
a normal rotation. (And is in the process of being changed as part of
my upgrade to AE.)

Is 'k1ll' offensive? It looks like the person who received it believed
so -- from the record, it looks like he had it changed. Is 'n0sex'
offensive? I find it amusing. (If someone signed N-0-S-E-X I'd
probably be lol!)

Finally, it really is an issue of free speech. I don't believe the government
has an obilgation -- or a right -- to try to protect us from ourselves.
In this case limiting what amateurs could have as call signs would do exactly
that. Do we take out *every* potentially offensive sign? Who decides
which are potentially offensive? Your ideas and mine would almost certainly
be very different.

And how likely is it that one of those potential candidates will come into
contact with the few callsigns that person finds offensive? I doubt that

it's extremely likely that one person will come into contact with one of the six or seven callsigns that he or she finds offensive.

> Years ago, I would have fought tooth and nail to preserve every single

> has become!

That seems a bit harsh.

I'm a really a newcomer to amateur radio. I listened a lot 20 years ago, though. My dad was/is a ham, and I spent a lot of time listening to his conversations. Didn't get my first license until about six weeks ago, though.

But I've done a lot of listening in the past two months. I normally scan the 2m/440 repeaters while I'm driving around town. In that time, I've never once heard anyone acting in a way that I felt was contrary to good and considerate practices. Not once. I've heard none of the 'CB' type stuff I keep hearing is on 2 meters. Whatever that may be. And I've had a couple of pleasant conversations with people when I had something to say.

The real point I'm trying to get at is this: A callsign is such a small part of an amateur radio contact under normal circumstances, that I don't think it matters a whole lot what it is. On the other hand, the actual content of the contacts *is* important. If newcomers hear contacts that don't consist of profanity, that are consistant with good practices, *thats* what will be remembered. Think about it: you usually need to listen for quite a while to actually *hear* a person's call sign. I listened so long this morning that I began to wonder if the two *had* callsigns -- but when the repeater ID'd, they did as well.

> So, as you can see, the problem with Kim's callsign is the fact that it
> deliberately detracts from the overall good, positive image of radio
> amateurs -- and degrades it's intended nature as a family-oriented
> activity suitable for young children as well as mature adults.

As I said above, I really believe that how we conduct ourselves throughout the non-identification portions of our contacts are what most people will really remember. Do those well, and most won't even notice when operator IDs as k-6-t-i-t (or whatever her sign really is).

> To paraphrase Mr. Hollingsworth, we need
> to decide whether we, as radio amateurs, have the maturity to
> conduct ourselves as hams in a conventionally dignified manner,
> or whether we are going to indulge our need to attract attention
> to ourselves in the manner Kim has chosen with her callsign.

With complete honesty, I really don't believe I'd even notice her
call sign if I heard it on the air. I can tell you what the conversation
I listened to this morning was about, I can tell you what the two
people did for a living, and can tell you a bunch of other things
about them, but callsigns? Well, they were 6 char callsigns, beginning
with 'K', and from area '8'.

> The
> former gives a positive, attractive image of ourselves as hams and
> of the ARS in general. The other is quite often found to be
> repugnant, and discourages participation by otherwise interested
> people, whose participation could have benefited themselves and
> the ARS as a whole. What we lose through such actions cannot
> be known for certain, but the potential for that loss would not
> exist if people like Kim would comport themselves in a more
> responsible manner.

I can't emphasize enough that the way we present ourselves while on-air
is, I strongly believe, *much* more important than any particular callsign.
That will make the difference to people much more than a few perhaps
offensive callsigns.

The way we present ourselves in person is even more important. Come across
as responsible, knowledgable, and polite, both on-air and off, and
people will have respect and a positive opinion of amateur radio.

Sean.

Dwight,

Thank you for a clear, logical and concise explanation of those oft-misunderstood Bible stories. I would add just one thing: Some people say that Jesus knew that some of those who wanted to stone the woman had sinned with her. (They had used her services, so to speak, and were covering up their own sin by killing the only witness). He showed them that He knew what their real motives were. I think in this Bible story there is a description of how Jesus began to write in the dust and those who would have stoned the woman drifted away until none were left. The Bible does not record what He wrote, but many say it was a description of the sins of those with the stones in their hands.

Great job, Dwight. Thanks again.

Well, a couple of responses for you.

First keep in mind that quite a few members of the Amateur Radio Service are getting to be elderly. That doesn't excuse bad behavior. But as a general rule, the older we get, the more ailments we succumb to. And the more medicine we take. And some of the medicines and ailments most assuredly can make us grouchy and generally impolite. Bear in mind that the same fellow who comes across as immature, emotional, and very rude may have once made very significant contributions to the world community with his technical achievements or many services to the public. That's not to absolve any individual of the responsibility to maintain courtesy. But it does absolve the entire amateur radio service from bearing the blame for the problems of a few individuals.

Bear in mind also the fact of the purposes of the Amateur Radio Service. Technical proficiency and public service and international good will, to summarize. I have found some of the noisiest mean old codgers to also be very experienced and knowledgable and helpful, if your skin is thick enough to put up with their weird senses of humor and poor manners.

Maybe a person's lack of tolerance for a Ham is more of a testament to his own maturity and flexibility than it is of the Ham who has led a long life of service.

Go figure.

An aquaintance of mine has been in the employ of the FCC satellite office
in Dearborn since the beginning of the month. The busts are coming down
on illegal cb and equipment manufactures.

Oh no, I don't know if I can sleep at night now after hearing this. I
better
go home and hide all my shit.

Hams should not be encouraging this type behavior
by freely giving mod information just to show off.(you know who you are)
This is the type behavior that ruined cb by messing it up for all of us law

abiding citizens.

Oh yes.....the Hams freely giving mod information ruined CB. Unfuckingreal.
I never met a ham yet that would freely give mod info on CB equipment
unless he was a Cb'er too. Most would sooner cut their left nut off than
help a Cb'er do anything.
Furthermore....I fail to see how mod information "ruined" CB. If anything
it
is better/quieter now than in the past 30 years I can recall. You can
actually
carry on a decent conversation pretty much anywhere you want with
a few exceptions where you get the music, incessant blabbering etc., and
I guarantee you will find all that same garbage going on right on 20 & 75m.
And.....I would sooner see a ham giving out useful information, rather
than that wonderful representative of hamdom N8WWM and other
garabagemiesters (is that a word?) in here posting
under more names than you can count on both hands and feet with
totally usless shit.

Black slave labor undoubtedly DID contribute to the
construction of the pyramids--and the airplane was actually invented
by Leonardo DaVinci quite some time before the Wright Brothers.

I assume the "prof up east" you are referring to is Leonard
Jefferies at CCNY. Jefferies is rather well known as an
African-American extremist, despite being an excellent scholar in
other areas.

Don't, btw, confuse what a professor may _claim_ in such
outrageous cases with what he can demonstrate by reference to
legitimate research--that's like confusing a ham's claims concerning a
given transceiver with the manufacturer's specifications--one
represents opinion the other represents scientific information.

It's a shame you don't accept the evidence of research, or
that you can't clearly see the difference between a reference to
research and an unsupported claim. Obviously, one of the things you
didn't believe when you were taught it in college was the difference
between science and belief.

Dave, you agreed with me. Are you feeling well today?

>Certainly depends upon one's actions in that adult sexual behavior.
>Watching it in a porn film lowers the viewer to the level of voyeur.
>As to some of the acts depicted, I guess it sometimes depends on whether
>you're kicking off or receiving, huh?

I would argue that it does NOT depend on one's actions in that
behavior. So long as all participants are adults and freely consent to
the activity, there is no legitimate reason anyone should judge the

"Morality" of that behavior except the participants.

As far as porn goes. I disagree that it lowers the viewer to
the level of voyeur. While I don't personally enjoy porn, that's
strictly a matter of individual taste (I don't like a lot of very
excellent films in other genres either). From a psychological
standpoint, vision is one of our most direct forms of sexual
stimulation--seeing a sexually desirable partner engaged in sexual
behavior is arousing for most normal people. That hardly makes the
majority of society voyeurs.

Porn, particularly in the US (some of the European work is
much better--and has much better acting and scripting), does a very
poor job of representing real human sexual behavior. For that reason,
it is a fairly poor introduction to sexual activities. It isn't
harmful, it just doesn't communicate accurately. As a logical result,
the acts depicted don't realistically represent real-world experience.

The opposition DOES have one difference from the pro-code
group, however, they are arguing that the current status demonstrates
that loss of the code didn't bring an "end" to ham radio--as the
pro-code group STILL argue it will do.

Frankly, BOTH sides of the argument are pretty pointless.
Right now a 5WPM test is required. After 2003 it's pretty likely that
no code test at all will be required. The only way we'll know if the
doom-and-gloom squad are right will be to watch and see what happens
then.

Neither one Phil. Seems like there is a CBer, who goes by the Handle of "Twistedhed", on the "rec.radio.cb" news group. He made some comments about freebanding etc., and I suggested that he contact you since you had in fact worked for the FCC doing some enforcement activity, and could give him the straight deal right from somebody who has done it. Needless to say he wiggled every which way he could to avoid the issue that he does not have to courage to contact you to ask some questions. In fact he's mad as heck about be branded a chicken on the group for not contacting you. So he spends hours forging messages from me (there are several on this group alone right now), or several others, as a means to get even, and hopefully to discredit the "framed" individual with obvious crazy comments in the messages. However it seems like he can't even get his facts straight for something as simple as the location of the Detroit FCC field office.

Larry, you and everyone else are perfectly within your rights
to decide for yourself whether a given behavior is "Moral" or not.
What neither you nor others have the right to do, however, is to treat
those who don't share your personal values as being in any way
inferior to you or as demonstrating lower moral values.

You state that you have every right to be judgemental--and
that it is a New Age view that you shouldn't. No, Larry, actually it's
one of your CONSERVATIVE values that states you shouldn't.
Christianity DEMANDS that its adherents not judge others (read that
bible so many of you right wing reactionaries insist on thumping).

Obviously, one very great difference exists between our
personal moral values. I believe it wrong to judge others on the basis
of whether they adhere to my personal values or not. You believe it
appropriate to do so. My moral values do NOT contradict my beliefs in
this area. Your's (assuming you claim to be a Christian--perhaps you
aren't in which case that don't apply) DO contradict your beliefs in
this area. Thus I adhere to my moral values while you violate your
own.

Gee, Larry, I guess that makes YOU the immoral person in the
discussion, doesn't it?

BTW, I'm not a New Ager. I'm a Buddhist. They aren't the same
thing, even though they share the principle of not judging others.

>> It's totally unreasonable to argue that someone's sexual

>to follow the crowd in order to gain acceptance, you'll develop some
>independent thought. Until then, you'll continue to sound like the
>weak-willed wanker you are now.

Junior, Larry?

I'm 56 years old.

Perhaps that's junior to you--but not to most people.

I'm totally confused by what you are trying to say here.

Are you saying that I should condemn _society_ for having sick
moral values? I'll agree with that--but I doubt that it's what you
meant.

Are you saying that I should condemn actions that cause pain
because society permits them? That's idiotic. I don't _personally_
happen to enjoy either giving or receiving pain, but that doesn't mean
I have the right or reason to condemn those who DO enjoy doing so (in
a consensual setting, of course).

Are you saying that I should condemn acts that give pleasure
because the majority of my culture does so? Why should I? That would
imply that society is the legitimate authority on what is "moral," a
rather absurd concept, given the nature of our system of government.

Sorry Larry, but you really need to make yourself clear when
you make accusations or statements like that.

You claim I follow the crowd, yet my _criticism_ is of the
crowd mentality that condemns those who DON'T follow their dictates.
That doesn't sound like I'm "following the crowd" to me.

>Well, Junior, I can live with being thought of as a self-righteous bigot
>by the likes of you, because what you think of me doesn't mean a damn

>thing to me in the first place!

Well, Fuddy-Duddy, I can understand that completely. After all
those who are self-righteous and bigoted seldom DO care what others
think--they're too busy hating everyone to listen.

>Tell you what, Junior -- you worry about yourself, and don't worry about
>me! I don't stay awake at night worrying about what people like you
>think about me. I don't expect that to make you stop whining, but at least
>you now know that you have the option of making better use of your time.

I don't worry about you Larry, you're so busy condemning
others who disagree with your narrow-minded bigotry that you don't
deserve it.

Give it up, Kim.

Larry is only capable of making CLAIMS--he isn't capable of
PROVING them--that would require that he be correct in the first place
and he never is.

As far as Hollingsworth goes, I really wasn't aware that the
FCC employed psychics--because that's EXACTLY what it would take to
make such a claim with any basis greater than personal opinion. And
while I'm sure Hollingsworth is an intelligent and capable individual,
his personal opinion is of no greater value than mine or anyone elses.

It isn't up to Kim to prove she is NOT hurting ham radio--it's
up to those who accuse her of doing so to prove she IS. Even a bigot
like yourself should be able to recognize that a person is innocent
until proven guilty, at least in the US. You made the accusation. You
demonstrate its accuracy.

Better yet, since you believe that it is Kim's responsibility
to "prove" that she isn't hurting ham radio, let's turn the accusation
around. I honestly believe that the kind of bigotry and racism you
commonly display in this newsgroup--which is read by many prospective
hams--is VERY harmful to ham radio. Since you believe the accused
should prove that the accusation is false, it is now YOUR turn to
prove that YOU are not harming the ARS!

Take you pick, Larry. Prove Kim IS harming ham radio, or prove
you are NOT doing so. But if you do neither, all you do is prove that
your claims are totally groundless and aimed at harming Kim, not
serving the amateur community.

There's nothing "self-apparent" about it, Larry. It's purely a
matter of personal opinion.

If you want to pick on something that IS harmful to amateur
radio's image--why not get on a tirade about the "Liberty Net"
instead? Or is the fact that you agree with their racism and bigotry
enough to make you think they aren't at all harmful?

Clean up your OWN act before you start trying to criticize
others.

You would be suprised to find out that I don't. And since I don't in over 2 years on this group NOBODY has ever PROVED I have done so, even you can't prove it. Several others on this group have had their accounts canned and no longer post through their orignal ISP, however I do. That's becasue anyone silly enough to send a complaint to my ISP gets the complaint canned becasue they have the posting logs and know for a fact what everyone on this group can only guess about, incorrectly that is.

However on the other hand you seem to like making late night phones calls until you discovered the calls you made got traced back to you. The phone company will and does prosecute people for that crap Mopar.

Given that bit of B.S. Mopar I would not put it passed you to take the same route like Twisted, and several others, by posting forged messages in various news groups. You can't intelligently debate the issues can you? And you don't have the guts to post your real name here either. You and Twisted look good together taking turns sitting on the same clutch of eggs.

>did not pick such vanity calls because they are inappropriate for the ARS.

Jim, have you listened on 75m recently--or on a 2m repeater in
the average city?

If you're concerned with the image the parents of prospective
hams will have, consider the filth, bigotry, racism, hate speech, and
deliberate jamming activities you COMMONLY hear in those bands.

If you, Larry, and others want to clean up ham radio, the
place to start is with the Liberty Net and other racist groups, not
with the mildly risque call Kim selected.

Talk to the average parent of a child old enough (and mature
enough) to become a ham. Ask him or her if it would trouble them to
know that a woman has the call sign W5TIT. Then ask them if it would
trouble them to know that a group of hams meat on 75m on Saturday
nights to discuss issues of interest to them as white power advocates.
Perhaps elderly bigots like Larry who grew up in environments where
racism was acceptable but sex wasn't would say the call sign was a
problem--but most modern parents would rather quickly tell you that
the call wasn't a problem--but that they would NEVER expose their
children to that kind of bigotry and hate.

We don't live in the 1940s anymore. Today "TIT" is a common
word on prime time TV, and no one is offended in the slightest. Hate
and bigotry, such as Larry and Dick often display in this group, on
the other hand, very definitely DO offend today's society.

>It should be noted that not only did Kim pick out that callsign, but she
>recommended similar callsigns to others as vanity calls.

Ok, I'll tell you what. To "offset" Kim's call, I'll get my
own vanity call (I've been thinking of getting one anyway) that will
compensate for the "TIT" in hers.

How would W8GOD be? No one could ever claim THAT call had an
offensive sexual connotation to it--and it IS available.

Besides, that way when people call me by my suffix (as someone
claimed people would call Kim), they certainly won't be offending
anyone else by calling "Hey, God, what about . . ."

Of course, I'll have to avoid being on the air Sundays or
everyone will be calling me, but . . .

>It is perfectly clear from reading Kim's posts that she chose that callsign for
>its attention and giggle factors, and doesn't see the harm in it.

Probably because there ISN'T any harm in it!

> The only way
>she would give it up is if the FCC revoked it.

Would you give up YOUR call if people here demanded you do so?

> That's probably not gonna
>happen, because the FCC doesn't forbid such callsigns, and Kim doesn't change
>her mind very often.

Sounds to me as though the people here feel the call sign is a
lot more harmful than the FCC does. Of course, what would they know,
they just regulate the radio spectrum.

>So the operative question is: Which is the lesser of two evils - callsigns like
>Kim's, or having the FCC enact and enforce a list of forbidden ARS callsigns?

How about a third choice: Learn to tolerate that which offends
you personally but doesn't hurt others and concentrate on stopping
behaviors that do?

Call signs like Kim's hurt no one. If the FCC enacts a list of
forbidden call signs all they are doing is capitulating to the
pressure of a religion that teaches it's followers that the human body
is evil and sinful and cannot be mentioned in public. If they're going
to make such terms forbidden, then by all means calls that end in
"LEG," "ARM," "TOE," "EAR," or "EYE" have to go as well. After all,
the FCC has no right legally to restrict anything based on religious
values, so the only legal basis for forbidding calls such as Kim's
would be to restrict anything that had to do with the body at all.

>twisted, liberal, PC definition of the term.

Open minded means being willing to look at other views than
your own without prejudging them. I can well understand that you
wouldn't want to be seen as open-minded. It would imply that you
weren't prejudiced.

> I am a truly independent
>thinker --

You are a bigot who follows the lead of other bigots.
Independent thought would require you to at least investigate the
roots of your beliefs and to try to determine if they accurately
reflect reality (hint: they don't!), something you are unwilling to
do.

> something you obviously don't feel you have the freedom to
>be. I can understand your discomfort, but don't feel any need to

>to choose a suggestive callsign back in the days when I first entered
>amateur radio.

Sorry to hear that your father wasn't willing to let you make
your own decisions. I can see why you envy those with loving and
involved parents.

> I'm also pretty certain that, had he heard some of the
>present goings on in the 75m band, he'd not have permitted my
>involvement at all.

Really?

That's a shame.

A good parent would have shared the experience with you and
used the opportunity to teach you about racism and bigotry. Sorry
yours was oppressive instead, but I'm sure you could work to overcome
that if you tried.

An axe to grind, Larry? If you meant that literally, it's
absurd since I've been arguing on HER side throughout this thread. If
that was meant to be a sexual innuendo, then it's pretty obvious that
the "morality" you pretend to adhere to has a lot of very flexible
aspects--or at least you treat it as though it did.

Actually Rick, it's just more namecalling. Try to come up with
something original. Calling somone a name proves nothing, and
accomplishes nothing
other than to show that the namecaller ran out of cogent arguments.

Nice try Larry.

1. I'm 6'3" and weigh 205.

2. I don't happen to judge women on their weight--I judge them
on their personality. Whether Kim is a size 6 or a size 24 is totally
irrelevant to me--from everything I've seen of her here in the NG she
appears to be a great person and one I would enjoy having as a friend.

Sorry to hear you're so prejudiced against those who are
overweight (if, in fact, Kim IS overweight)--it really marks you as
even more of a cretin than you formerly seemed. I know a number of
fantastic women who are overweight--some by quite a considerable
amount--and I'm sure they have to put up with obnoxious people like
you all the time.

For someone who CLAIMS not to want anyone to create a bad
image of hams, you certainly delight in demonstrating that some hams
are offensive, racist, bigoted, and sexist. You may not have "TIT" in
your call sign--but you have ASSHOLE written all over your face
instead.

So why are you so worried about my comment then? Funny how the phone rings, then I post a message a minute later after the call, then you call ragging about my comment a minute after that, then a message appears on the news group (from you) with the same comment only in written form. I next post a message about the calls being traced, and guess what Mopar, no more calls. Gee, and you are going to tell me it's not you? Then considering all the nice offers you made to come up here to meet me after the phone deal, even Twisted is a better liar than that!

I agree with you completely.

While I oppose war on principle (and, yes, I know that makes
me a hypocrite since I pulled two tours in Vietnam voluntarily), there
are times when I can see the need for it. Right now, we are
effectively correcting the mistakes we made when we assisted the
terrorists in Afghanistan in the first place. If we stop at the point
of restoring a government of the people to Afghanistan and then leave
them alone, we'll have actually done some good.

Of course, I don't actually expect us to do that--after all,
the US isn't exactly known for keeping its nose out of other nations
affairs, but it's a nice fantasy.

One thing I _hope_ we are intelligent enough to do is to
restore the Northern Alliance to power and allow THEM to try Osama bin
Laden (for treason, murder--he DID kill Northern Alliance leaders, and
other charges) instead of arresting him and trying him ourselves. Not
only will that send a clear message that we respect the rights of
sovereign nations to try their own criminals, but it will eliminate
the obvious terrorist threat that will come if we attempt to try him
in the US. Besides, given the nature of Islamic law, it's pretty
likely he'd receive the same punishment--death--from the Afghanis that
he would receive from a "military tribunal" in the US--and the
sentence would be carried out with typical arab speed.

It's not all that far from radical feminist theory, actually.

According to Andrea Dworkin, for example, "All acts of
intercourse are rapes." Why? Because women have been oppressed for so
long in our society that they don't have the ability to make a
decision as to whether to have sex or not!

> I know that paragraph probably doesn't make much sense, but you try

Bear in mind that the view you expressed above is only valid
for _radical_ feminists--not for other, less extremist, feminists who
are simply trying to secure equal rights, treatment, and wages for
women, something any rational person would consider both reasonable
and desirable.

The funny thing is Rick, the same would probably be true of most of the folks here - believe it or not. If we had met on the air, or at a club meeting, we'd probably get along just fine. We all share the same interest after all. The internet does funny things to people. We don't seem to behave in as socially-acceptable a manner here as we would in person, or on the air. True?

Class and taste are a matter of personal preference. The "trailer park"
mentality is one of religious bias, intolerance, and intellectual
shallowness.

There, there. Stomping your foot and holding your breath accomplishes
nothing, Junior.

Why, oh why, do you pubescent creeps feel called upon to recruit us coded
types? It sure as hell cannot be because we could do your 'cause' any good;
that is firmly in the hands of Geneva in 2003. Our opinion, while always
interesting and now and then important, is not and cannot be decisive. So
are we not justified in questioning the motives just a tad?

Sure as hell looks like some sort of mind game to me.

I would strongly advise finding a good source for EL 509 and 519
tubes.
When you see what it is going to cost you when you drive this beast
beyond
about 150 watts on Antique Modulation you may well rethink the
purchase.
This may well be a fairly clean amp as they go but as with any
broadbanded
tube amp, you are well advised to run it with a good lo-pass filter in
the
output.

As you get the schematic and parts list, in European nomenclature, it
should
not take much to figure out how to mod it.

You might want to find out exactly where it was built. For $170 it
may well
have been Outer Mongolia.

Damfino but there is no good reason it couldn't be done. There is
enough
drive available for two in parallel in AB1.

Subject: Re: Linear Amp Question please:
Newsgroups: rec.radio.cb
Date: 2001-10-15 21:07:37 PST

Without reference handy, the 4CX250 should have a current draw on the
order
of 2-3 amps so a .3 drop should take about .1 to .2 ohms at something
over 1
watt.

Curious to see how you solve the problem.

Liquid sodium cooling maybe??? Running outside makes some sense but
it
ain't going to happen with sheet metal. For no better reason than the
press-fit diodes would be in trouble when the aluminum expands and the
holes get bigger. Talk about a really catastrophic failure.

As for me, I've seen many a call sign that some would find objectionable...I
could care less.
As long as the individual doesn't use the call with obnoxious
overtones...Let me rephrase that...I only care about how an individual
behaves and relates to others. If I don't like the way they act I can
usually find another frequency.

I usually find that those who make a "mountain out of a mole hill" don't
have a lot to say that is worth hearing.

I've never had such bad experiences on CB. Sorry you have. I have actually had worse experiences on amateur radio than I ever did on CB. I don't think at any time on CB I ever heard a racial slur; turn it on to the '88 machine almost any given weekday morning (especially during the election) and you can hear some of the most hateful, degrading comments I've ever heard on any radio--and that is amateur radio. Most of the time I spent on CB here was on LSB, though. As I understand it, there's a whole other culture on SB. In fact, we didn't even have "handles." We used our names, didn't use the CB lingo, etc. And, no one ever tried to play radio kop.

Heck, one time when the FCC was talking about having a law that any tower over a certain number of feet would have to be painted red and white, one of the gang on '88 keyed up and said if he painted anything on his tower it would be a great big FU. I about drove off the road on that one.

Steve!!! Dammit...hush. Larry's brought the subject up again--nearly right on time for the holidays, and I am wondering how long he'll run with it this time. I've added the aspect of mathematics to the mix and he's having a difficult time coming up with an effective dodge. I told him to prove that my callsign is a detriment to the ARS, since the numbers indicate he's wrong; membership's up.

So, quiet....shhhhhhh ;)

You are the fellow who arrives with the condesending attitude toward
those you perceive as judgemental. Then you proceed to make judgements.
What am I to believe?

> A comparison is NOT a closed minded presentation--I'm only
> going by what I see demonstrated. If a person doesn't want to be
> compared to Hitler, s/he need only stop acting like Hitler.

...and if you don't wish to be compared to a left leaning 60's,
everything-is-okay kind of guy, quit talking the talk.

> As far as calling you an idiot--that isn't a question of
> closed mindedness, it's a simple statement of fact. You'll note that I haven't resorted
to calling you an idiot. I just think you're naive and misguided.

I don't depend upon you for validation. In fact, I rather think that if
a guy like you thinks I'm an idiot, I must be doing something right.

We all make judgements in forming opinions, Rick. Being an open-minded
individual does not necessarily mean that one accepts everything as
being good or acceptable. Yet I feel that if I don't agree with your
views, you'd think me close-minded. Is it your belief that someone who
hears your ideas and rejects them after hearing them is close-minded?

Do your views on Christianity represent open-mindedness or close-mindedness?

I'd think that someone with your academic credentials would realize that
a child's thought processes are not fully formed. Kids often do stupid
things or things that are wrong. Parents who let their children make
all their own decisions are simply shirking their responsibility toward
the child and society. Nice cheap shot about my parents. My dad was a
succesfuly newsman who became an Episcopal priest.

Hey! What do you want to know about him? Ryan lives about a mile and a half
from me and I've known him since he was a teenager.

He even helped me a couple of times, pulling on the rope to get the new
tower and antennas up.

Now as to satisfaction, enjoyment, and conversation...I could probably get a
couple hours of satisfaction out of telling stories about him.... What I
don't know for sure I can always make up!

Course, I'd have to add that I know few people whose first 6-meter contact
was Alaska.
Take a bow Ryan!

Don't need to, we already know that, among many other advanced
concepts.

Maybe we should
> (if we haven't already) adopt a version suitable for HF for DXing when
> even morse code CW doesn't get thru.

Already have -and have used- plenty of that, too.

You may need a specially designed
> for the purpose HF radio, but special transmitters existed for CW use.

You can make a single active device both transmit and receive
radiotelegraphy. Try that with any other mode.

>his own sin.

But doesn't this simply state that the Christian religion is
necessarily _better_ than the beliefs of the person seen (by the
Christian, not necessarily by him/her-self) as "sinning?"

Perhaps a Christian "judges" on this basis theoretically
(although we ALL know that most people who are
judgemental--particularly those such as Dick & Larry in this NG aren't
basing their judgements on the standards you list above), but that's
irrelevant in the long run. The fact remains that by the very act of
assuming the person is committing a "sin" and needs to be made aware
of that fact, they are in fact judging the person as not being as
"enlightened" as themselves, and therefore automatically assume that
simply because their religion teaches them something is a "sin" or
"evil," that is the end of the matter and no debate as to the accuracy
of that claim is necessary or desirable.

> The popular story of the woman being stoned for prostitution is a
>good example of this concept. Jesus stopped the stoning and told those
>in the mob to let the person without sin cast the first stone (a
>variation of your "Judge not, that ye be not judged"). In other words,
>he stopped the ACTION of the mob. However, after the mob went away, he
>turned to the woman and told her to go and sin no more. He could not
>have said that without making a judgment that she had indeed sinned.

From his perspective (assuming you believe in him in the first
place, of course)--but that does NOT make his judgement any more or
less valid than her own. From a Christian perspective, prostitution is
"evil." But not all religions share that belief--nor is it necessary
for someone to be religious at all to hold a valid set of morals he or
she lives by.

Bear in mind, also, the even if the entire story you refer to above (including the divinity of Jesus) were true it _still_ would not have contradicted the concept that a Christian should not judge others. He states in that story that "he who is without sin" should cast the first stone--in other words, that only those who have not themselves "sinned" have the right to judge the sins of others. But that would simply mean that he was the ONLY one qualified to do so, since the bible states that he is the only one "without sin!"

> So, as you can see, you can judge whether a person is sinning (in
>fact, it is almost impossible not to). But the key is what you do
>about it - the actions. The passages you quote above refer to actions,
>not to thoughts or simple statements.

But, of course, it still ends in the same result--the Christian ends up judging people based on his or her personal beliefs not on any unbiased or impartial basis. Simply because the Christian bible states something is wrong does not make it so--except to the person who BELIEVES in that faith, who should--if he or she sincerely believes in Christianity, restrict his or her judgement and actions to others who subscribe to that religion as well.

> By the way, please don't ask me for the bible passages - it has been
>a very long time since I've had anything to do with religion.

I've read it recently--and I've _never_ been a Christian. I just don't feel it's rational for me to argue against principles of a religion unless I know what they believe in the first place (even though, since most Christians haven't read the bible, _they_ don't know what they believe in anyway).

Gee Larry, don't you ever wash that mind?

You mean you honestly can't sit down with a woman and have an
intelligent--and EQUAL conversation with her w/o sex being part of the
interactions? How sad. Personally, MANY of my friends are women--just
as many of my wife's friends are men--and neither of us has the
slightest reason to distrust the other. That you don't trust your wife
alone with another male--and that you assume any married woman who
WOULD meet a man for coffee w/o her husband must have poor character
says a world about your personal integrity. After all, if you wouldn't
meet a woman for conversation alone either you have no respect for
women and don't believe you can have an intellectual friendship with
one or you can't be trusted out of your wife's sight and both of you
know it. Either way, it is YOUR character--not Kim's--that was just
demonstrated to be deficient.

I don't "have the hots" for Kim, Larry. If I wanted to get
laid outside my marriage I wouldn't have to chase a monogamous married
woman in over 1000 miles from me Texas to do so. From what I've seen
of her, I happen to like Kim as a person, and respect her integrity
and intelligence--three very good reasons to correspond with someone,
none of which have the slightest thing to do with sex.

Sorry, Larry, but maybe you can't be trusted out of your
spouse's sight--that doesn't surprise me at all--but that doesn't mean
that Kim can't or that her husband wouldn't trust HER to enjoy a
conversation with a man when it involved an area not of interest to
him as well.

You really stretch to find something "immoral" about Kim (and
about me, for that matter), don't you Larry? Could that be because you
know what an ass you're making out of yourself about her call sign and
you're just hoping to find some justification for your offensive and

sexist attitude toward her?

While you make several other relevant points in your message,
it is _this_ point that is most important.

Free speech is the cornerstone of our society. Without it we
are in a pure dictatorship, regardless of how benevolent that dictator
might be. But free speech, by necessity, carries with it the risk of
offense. This is something that as Americans we simply have to accept
as a cost of BEING Americans. As I pointed out in an earlier message
to this thread, it's the same as two children playing with their toys;
if one of those children wants the right to play with his/her toys
without being limited by the other, that child must tolerate the same
behavior as well. If we value the exercise of our own free speech, we
must permit others to exercise their own--and before Larry or Dick
claims I don't allow them to exercise theirs, that's inaccurate--I DO
support their right to speak out. I simply reserve the right to point
out the flaws or bias in their statements as I chose.

Welcome to ham radio, Sean. We're not usually as obnoxious on
the air as we are in this group--although a few are (mostly on 75m).
Unlike the discussions here, most of what you'll find on the air is
pretty "vanilla" in nature instead of controversial.

Well, again, 'scuse me. We must leave integrity out of the realm of this discussion. Leaving that aside, Larry can't keep a woman around long enough to call her a wife.

> After all, if you wouldn't
> meet a woman for conversation alone
>

Ummm, a woman probably wouldn't meet Larry alone, for conversation or otherwise. I sure know I wouldn't. I might toss a couple 'o cents into his cup as I walked by, but that would be about it.

>

Yeah. Uh. Since Larry doesn't have a wife... And, since Larry can't have an intellectual *anything*... And, I'm not so sure about trust. The one thing you can trust about Larry is his consistency--not physically though that also--but personality-wise.

> I don't "have the hots" for Kim, Larry. If I wanted to get

First lesson after I met my traditional Southern Gentleman. He thought it was natural and normal for a man to "direct" a woman's life, etc. Two/three weeks after we got to knowing each other, he told me I was "not going out with any of my girlfriends." I put my little shakey finger up and centered to him that the kind of behavior (insecurity) that he just displayed would not be something I agreed with nor would accept. It took about a year of dialogue and reasoning, but he realized that my concept of jealousy--insecurity at its ugliest--is both unjustifiable and unreasonable to me. In a strong, healthy relationship (friendship, love, or marriage--any of them), implicit trust is what I demand and what I offer. If my implicit trust in a man or a friend is violated--shame on *my* bad judgement, not theirs. That's the way I see it. When implicit trust is

attained, *anything* else that makes relationship successful is there.

>

Naw. I think Larry actually believes he is avenging the "evilness" in this world and sees me as one of those evils. When someone is as judgmental and condemning as he is, it is often (IMHO) due to quite a lack of personal dignity in their own life. If you'll read his many posts on having been rejected for promotions, etc., even when he was in the military--in the *face* of the perfectness with which he served but went unrecognized--you'll capture a lot of Larry's grasp to be of value to *someone--anyone* in his life. What he doesn't realize and probably never will is that once he realizes that he is of perfect value to himself, or that he needs to change values to achieve it, then he no longer needs anyone else's approval, or honor.

Kim W5TIT

PS--By the way, Larry (I think) claims to have a degree in Human Relations. That just goes to show that book sense often has nothing to do with common sense or applicability. Larry would epitomize the 'evil HR Director'.

Ya get half credit, Dick.

The setup pictured is from QST for January, 1956. The transmitter on the left is a homebrew setup built by W6TZZ. Runs a 6AQ5 VFO feeding a 5763 multiplier with a pair of 6146s in the final. Really nice job, mechanically. The builder was in the 11th grade at the time, and won a prize in the Ford Motor Company Industrial Arts competiton. (Prize was $150 and a trip to Detroit, which was a big deal in 1956).

Careful Mopar, he knows someone, somewhere
so he can find out anything. Wait, as Frank love's to
say..... Did Miss Cleo tell him with a
callback?

You know Leland, I always thought you
were just trolling here for jollies, but I see
that this is real serious stuff to you LOL.
The phone company traced the call? you
found out it was Mopar? The phone Co.
will only ask you if you know someone
at this #, they can not give you the name
of the person who has that # it's against
the law. But don't tell me, you know
someone there too, FBI, FCC, CIA,
NSA, ASPCA boy you have all the
connections.....LOL.

I next post a message about the calls being traced, and guess what Mopar,
no more calls. Gee, and you are going to tell me it's not you? Then
considering all the nice offers you made to come up here to meet me after
the phone deal, even Twisted is a better liar than that!

It is certainly odd that one who so often makes incorrect character and
background judgements about people is employed in a field where she
needs skill in using logical thought. Of course, being employed in a
field and being any good at it don't automatically go hand in hand.

If you want to participate, Kim, you may have to learn a few words of
the local idiom. If I use a term and you don't know what it means, you
might want to find out what it means. It isn't my lack of knowledge
which is the problem.

Dave:

Yup. He's a university professor, and, as such, has a professional
mandate to comply with the edicts of liberal, politically-correct mind
control at all times. People who make judgements are independent
thinkers -- and, as such, are a threat to the creation of the One World
Order.

Kim:

That's where you'd be wrong. I was in Safeway the other day, and there was a bottle of Tobasco sauce on a shelf, several inches over my head! Somehow, I managed to "get it." In reality, I get lots of things that are over my head.

Cecil:

Yawn! I don't recall ever stating that Kim's callsign is doing quantifiable "damage" to the ARS, only that the potential for such damage certainly exists -- as pointed out by no less an authority than Riley Hollingsworth. Do you disagree with Mr. Hollingsworth's statement that Kim's choice of a callsign has the potential to take the ARS "...one step closer to extinction?"

Cecil:

I have nothing against coffee and conversation. However, If I were
married, my XYL would not be having either with another man without
me being with them, unless he were her brother or father. One reason
why I'm not married is because I've yet to meet a woman who seems
to be able to grasp this simple concept.

There must be room for the pendulum to swing if society is to work.

Radical extremism, in ANY form (from the right or left), accompanied with a closed mind insures their downfall. and that's true at any level.

If anyone, or ANY institution, takes the position that they're the final arbiter of the absolute truth (of what's good or evil) they're, happily, contributing to their own extinction.

Rich

Arbitrary power is most easily established on the ruins of liberty abused to licentiousness.

> Well, seriously, there is a problem with the dialogue on the topic, then :)

The problem is that the FCC is looking for minimum testing, and has
been for years. To them, every test requirement has to prove itself
necessary to their satisfaction.

> Because--in my opinion--there is no way that CW will continue to be a
> testing requirement and--in my opinion--*nothing* will be brought forth to
> take its place.
>
Unless the FCC changes their tune radically, anyway. FCC reduced both
code and written testing with the restructuring.

> However, to entertain the topic of discussion, on your 1), above, a) if the
> VEs would have to provide the equipment, so be it. Either they take their
> VE status seriously and meet whatever requirements there are or they "get
> out of the business."

That's easy to say when it's not you that has to provide the setups.

> Now, PLEASE VEs reading this, don't think I am
> slamming you--I am not. I am sure that most of you take yourselves quite
> seriously; and, b) the testees complain now and will always complain.

The problem is that unless the existing system can be shown to have
serious problems, the FCC won't go for a new one that is a lot more
work.

> On
> your 2), above, a) in my opinion the objectivity of VEs is in question;
> maybe not on a majority basis, but certainly one-to-one. I know of stories
> of people getting their tickets who shouldn't have;

We have all heard the stories. That simply means that some VEs don't
follow the rules. The test system itself, however, is objective in
that no judgement on the part of the VE is necessary if the rules are
followed.

> b) I would support a
> return of the FCC examiner. While I know that will never happen, I believe

I agree 100%. Plus, with FCC examiners, the Q&A could be secret again.
>
> I fully support getting rid of the question pool and having essay questions.
> I would *really* like to see something like that.

Same here - but it's got little chance of happening.

> I actually took no
> pleasure whatsoever in getting my ham license. The same as I take

> memorization--both on the written *and* for the CW. I couldn't do a bit of
> CW today...at least I don't think I could. I can't answer half the old
> questions.

Now you begin to see what the Ancient Ones like me are talking about.

Although my ham exams were multiple choice, I had no idea what they
would be like other than the general topics covered (like "Ohm's Law
for DC", "where are the band edges for the license you want to get",
"how does a transmitter work" etc.) So I learned enough to be able to
answer essay questions, because the ARRL License Manuals of that time
presented the questions that way. I never really studied for the test
- I just learned some radio stuff.
>
> Contrary to the thoughts on both sides of the argument: I *don't* believe I
> learned anything through memorization of the questions, and I *don't*

> believe I learned CW by memorizing characters. If I'd learned anything, I
> would be able to recall the information. Either I have Alzheimer's or I
> didn't learn.

Maybe you learned and then forgot. Not everything we learned is
retained forever, even if we have good memories.

> in their amateur radio knowledge.

It all depends which hams you hang out with, Kim. Most of the hams I
hang out with have more ham radio knowledge than me.

> It is only the expertise from people such
> as yourself that we "gain" any inspiration.

Thanks! But there are lots of hams like me around. One only has to
look.
>

>
> OK, I concede. Yes, they learn enough to pass the test.

The point I was trying to make was the willingness part.

> I think I did.

I checked the comments database on the FCC website and there are no
98-143 comments on file with your name on them, Kim. Too bad.

> > >One of

> > I did. See the comments.

> You are in the minority.

There were over 2000 of us who commented - out of almost 700,000 US
hams and 250 million or so US citizens. Sad, really.

I suggest you look up my comments. You might be surprised. They were
posted here and are still in the FCC ECFS system.

> It is my belief that most people just like to bitch.

It all depends who you hang out with.

> > > What a joke.

>
> As it should be.

Which is why you won't see practical or essay tests any time soon. Too
many resources required.
>

I don't accept some of them. Look at how Mayor Giuliani changed NYC by
not accepting some things.
